they won't be a scanner on the market to pick up digital signals for
at least a year to 18 months.....

To my knowledge, there are no digital scanners out right now; I have heard it will be about 2 years, and even then, they will be expensive (300-400 $$ range)...

However, the current Uniden BC780XLT, although not digital, is supposed to have an adaptable module that Uniden can upgrade the scanner to digital for about $100 when the system becomes prevalent. The downside to this is that this particular scanner now retails for anywhere from $329 - $500, depending upon where you buy it. If you're willing to wait a week or two, you can order it online and save a bundle...but, several places in Houston have it in stock for about $449.00.

You could probably go to Uniden's website and find out more about it. Good luck.

One other quick note... switching over to digital radios is very expensive and many agencies will not do it for years. So, I don't think there's any big rush. I know for a fact that HPD/HFD & DPS is not going to go to digital anytime in the next five years. The cost is too prohibitive.

Go to this location http://www.trunkedradio.net and under System Info on the left side of the page click that. then select Texas and look up the Southeast Texas Area Radio Network (STARNET) and look up the Baytown site on the list. Program in all the Baytown frequencies according to the instructions in the radio manual for a Motorola Trunked radio system and it will work just fine. The Downtown site will carry all the Harris County Trunked radio traffic on the Starnet system but you are most likely too far out to receive that site. The Baytown site is on top of the new bridge and I receive it just fine out here in Crosby.

1720. trunker data files?

visiting from the east coast...

if anyone could email me the trunker (v3.8.3) data files
for the HCSO and Galveston Co. systems (and any
others of interest) i would appreciate it.

looking for trunker files with talkgroups already
ID'd...would save me hours of time for sure.

thanks!

You are correct
I was referring to Baytown (as in the subject line) PD which is part of the
System 2318 Type II Smartzone WPKL474, WPGD390, WPPF214
Commonly referred to as the Harris county trunk system.

1726. Total trafic

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-12-28 21:41:06 UTC
From: kg5ai
Topic: 1726 Message: 1726

Looks like Total Traffic is firing up operations on 450.2125 MHz.
This repeater was used by KHMX some time ago.
Appears to have very good signal.
Yet, another traffic company in town.
Wonder if they will be in Transtar too.
Wish someone would get all the highway cameras working now.
Apparently, MANY of them are in need of repair.
I saw someone in a bucket truck messing with one near La Marque of 45
today but don't know who's camera it was.

myles

p.s.
Harris County OEM has three talkgroups on the trunked system.
OEM 1 is being used by the Coasties on the channel.
Anyone know what 2 and 3 are? I suspect they could be in the 17,18,
or 19000 numbers (Uniden/decimal).

1727. [Fwd: [TexasScan] Major Terrorism Drill in Texas City Planned]

Anyone else hear of this?

An article from the Texas City Sun. This drill should provide very interesting comms in the area...

TC will be part of major terrorism drill

By Lora Bernard
The Texas City Sun

Published December 27, 2001 11:33 PM CST

A Gulf Coast drill is being planned to prepare communities in case of a terrorist attack or other large-scale disaster might occur.

The 3-day drill, which is being administered through the Department of Public Safety's emergency management office, will incorporate several agencies including Texas City, which is acting as a host city as the event is being planned.

"It will be the biggest drill we've ever conducted," said Mayor Carlos Garza. "I think it is important for the people of Texas City to understand what is going on."

1728. Re: HFD Ladder Trucks/Unit Numbers

Yahoo group: HoustonScan (1999 — 2002)

From: hfdcfa
Topic: 1728 Message: 1728

As a person that has direct ties to the Houston Fire Department I will answer the question about how unit numbers work. If HFD dispatches on a fire and you hear, for example Engine 502 and Medic 528, the five simply means it is the second unit of its type at that station. Houston has about 82 stations, but have trucks numbered up into the 100's. Despite only 82 stations there is station 102 located in Kingwood.

1729. HFD Equipment in Barns

Date: 2001-12-30 06:28:10 UTC
From: hfdcfa
Topic: 1729 Message: 1729

The "barns" that are being refered to are the current Downtown Station 8. The City of Houston demolished station 1 and 8 for the purpose of building entertainment facilites. The current Station 8 is a short time Station and serves all of downtown Houston.

1730. Re: Questions/HFD

Topic: 1223 Message: 1730

As to the question below... In Houston is all fire/ems calls no matter if they are 911 or not are dispatched and through fire dispatch. 911 only takes the call. They then transfer it to the appropiate agency. Once it is transfered the info is taken by a call taker and sent to a dispatcher. Based on the information the call taker receives and previous call histories on a address the dispatcher determines what is needed. Once on scene their is usually little radio traffic unless it is a major or working fire and then the radio traffic is still limited and the most will come from the acting incident commander. As far as medical calls 4 units may be dispatched, but if it is not necessary the radio is kept clear for other calls and if two units need to speak to each other (ex..medic and ems super) they will be assigned a sidde channel.

To answer you question the Houston Fire Department has the staff to on duty for all equipment that is kept in the stations. For example Tower 6 is a ladder truck w/ a basket. It may rotate to different stations at times, but where ever it is there is a crew assigned to it. They do not go out unless it gets called. This goes for rescue trucks, medics, ect...

A pumper and ambulance are often dispatched from the same station as to avoid pulling from more than one are and to pull the closet units. An engine is pulled simply for man power if dispatch feels it will be needed. It does not always happen this way. Dispatch will pull the closet avaliable units.

1733. Demolishing Fire Stations

Yahoo group: HoustonScan (1999 — 2002)
Date: 2001-12-30 16:55:01 UTC
From: Lester Bashaw
Topic: 831 Message: 1733

Fire Stations Demolished for entertainment centers...kinda tells you where the city's priorities are! I have seen HFD in action and, in my opinion, they are they best considering the adversities they work with! (No, I don't work there)

As for reduced radio traffic...most apparatus go to a simplex channel once on the scene...unless you're close, you won't hear them.

BOOSTERS HAVE A DRIVER ASSIGNED TO THEM WHICH HAVE BOATS ATTACHED TO THEM WHEN NEEDED. A BOAT IS ASSIGNED TO EACH BOOSTER. HFD IS FULL TIME 24/7. SQUADS HAVE PARAMEDICS AND THEY TRY TO ROTATE THEM TO A PUMPER. RARELY HAPPENS DUE TO MANPOWER. THE AMBULANCES ARE STAFFED WITH FIREFIGHTERS FROM ASSIGNED TO PUMPERS. AMBULANCES HAVE A DRIVER AND EMT. SQUADS ARE DRIVER AND AN PARAMEDIC. PUMPERS AND LADDERS ARE RUN WITH 3 MAN. IF OT AND MANPOWER ARE AVAILIABLE THEN 4 RIDE ON THE LADDER AND PUMPER.
HFD GETS MUTUAL AID FROM THE VILLAGE- 1 LADDER AND A FEW OTHER SMALL TOWNS SURROUNDED BY THE CITY. HFD WILL MUTAUL AID TO OTHER SURROUNDING AREAS. CHRIS

1739. terrorist training/weather preparedness

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-01 20:19:58 UTC
From: Myles Barkman
Topic: 1739 Message: 1739

Just a heads up on some interesting listening coming up in March.
Starting March 5, Texas City will be the host city for a terrorist exercise for Galveston County. It is supposed to last three days.
March 5th is on a Tuesday (while I'm at work) so don't know how much I'll be able to listen to.
It appears that Brazoria County will have a separate drill at the same time.
I have heard that the Port of Houston is getting ready to do some anti-terrorist drill. Don't have details on when this will be.
Maybe we can figure out what the OEM-2 and OEM-3 talkgroups are since OEM-1 for Harris County has all but been taken over by the Coast Guard patrols on the ship channel.

On a different note, if you've been paying attention to the weather lately, you know that Southeast Texas is under a Winter Weather Advisory.
Latest data does not appear to support this now.
The most we may get are some icy spots on the road where rain had already occurred. Does not look like snow is possible now.
I'm going to look for my ice scraper anyway.
TXDOT is busy doing something out there on talkgroup 17520 on the HC system.
OK, just confirmed they are doing some deicing of roads.
Thought they might have been out changing the speed limit signs.
Check freqs from 47 to 47.40 MHz for sanding trucks and report what you hear.

1740. HFD over the holidays

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-02 02:07:52 UTC
From: jgohio
Topic: 1740 Message: 1740

I spent the five days up until Christmas in Houston. Houston FD scanning was pretty good with a number of working fires. As I mentioned last summer, HFD is using the tactical channels a lot and this makes for some good listening. My observation is that on most working fires A3 or A4 are used, although I note an exception below. Someone else on this page commented that the D channels are usually used but my listening suggests that they are mainly used for high rise fires. That was discussed on the site aobut a month ago.
The night of
December 25 was quite a conclusion ot my scanning. Between six PM and midnight there were 3 second alarm fires (the usual average for multiple alarm fires is probably one per week or less). Good traffic on the tac channels on all of these fires. On Brinkman St just off of 610N the district chief came on location with fire coming from a warehouse. It was in the rear of other building and hard to reach. There were several conversations about whether or not it had spread to another larger warehouse-the DC said the fire was "rolling up under the eaves" of the other building. Then E58 came on and said, "We've got the fire knocked down."
The fire at 8600 Westheimer was really intersting also. Let me give some background you would not get just from listening to the scanner. The shift working was the shift the late Capt. Jay Jahnke-killed in the line of duty in October-was on and the safety chief and I believe other units from his station were on the scene. It is also the same general part of town where two firefighters died in the line of duty just under 2 years ago in a fire in a restaurant. Safety would be on hte minds of firefighters at a scene like this. On Westheimer the first units came on location with heavy smoke from a
restaurant. The dispatcher put the incident on D3 but either some of the units used A3 orI was very lucky to be able to pick up the walkie talkies 3 or so miles away in the West University area. The Safety
Officer, Safety 2, radioed that 2 lines (hoses)were fairly far into the building and requested a crew to force open a door so they would have an alternant route of escape. There was then traffic that a thermal imaging device picked up fire in above the ceiling over and behind the hose crews. A long minute later Safety2 radioed , "Im pulling them out." I was on the phone with a firefighter buddy who was also monitoring and we both breathed a sigh of relief when a couple of minutes later the message came that a PAR (head count) was complete with all personnel accounted for. Shortly after that the traffic was for setting up large calibre streams for an exterior attach and sometime after that warning aobout a wall about to collapse. FD monitoring doesn't get much better than that.

A while back someone who e-mailed me off the site commented that
they were afraid they were misssing some action. I commented that
there might not be as much action as you expect, maybe 3 to 5 working
fires a day-but that if you learned about FD radio operations the
fires you heard would be much more interesting and you would also
learned to pick up intesting things on incidents which weren't really
major. There are several persons knowledgible about FD operations,
myself included, active on the site now who seem willing to answer FD
related quetions, so monitor, monitor the tac channels, listening
carefully-that lets yuo know what is routine and makes it easier to
pick up when something unusual is happening-and ask questions.
I also monitoed FD's in West U, Bellaire and Southside while in
town but all
that happened there was petty routine.
Happy New Year and Happy Scanning to all on the site.
Joe Gay

Friendswood does have 800. They are on Galveston, Harris, Brazoria Counties and the League System. Every Police car has an 800 handheld in it. The Fire Dept also has the capablity of 800.

With the addition of the new Pearland site to the Harris County system, Friendswood may take a second look for moving dispatch over.

LEAGUE CITY USES THE HARRIS COUNTY SYSTEM.

Has there own outdated 5 channel Type II smartnet system.

CLEMS USES

1744. Help Please

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-04 16:48:30 UTC
From: txslady026
Topic: 1744 Message: 1744

I am looking for the scanner frequencies for the following:
Laporte Police and Fire
Deer Park Police and Fire
Pasadena Police and Fire

If you know where I can find them please let me know.

Thanks
Shannon

Look on Southeast Texas Radio Network. This will give you a list from all over. Enter it in search on your search engine. That will take you to the site.

Shannon,

I used to be a firefighter in La Porte and my wife is an ex La Porte
Police Officer.
LPFD: 154.130
LPPD: 155.625
La Porte EMS shares the 154 freq with the police department.

I can't remember Deer Park or Pasadena of hand. I no longer live in
the area and have forgotten them.

Hope this helps,
Chris

1748. New TGs Found

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-05 05:18:17 UTC
From: bpckty1
Topic: 1748 Message: 1748

I have been noticing that Memorial Villages PD primary, 453.3250 MHz, has been quiet since the first of the year. Tonight, I found out why. Primary is on Harris County, TG 19248 (repeats on Downtown and Clodine towers). Not enough activity tonight to tell what the other TGs are and whether or not Hedwig Village and Spring Valley PDs have made the switch.

Also, just happened to catch one of the Fire Marshals tell another to switch to channel 3. OK, a quick search showed 18832.

The quest continues.

Happy Scanning

1753. Re: [HoustonScan] Federal FRS

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-08 13:14:47 UTC
From: Scot Fahey
Topic: 1751 Message: 1753

The so called FED FRS type radios amount to the old MIL UHF band that used to run from 226-400 MHz .
Think Motorola units with a software crack to go down to 395-440 MHz
Due to the fact the band of frequencies was left out of FCC Type approved radios .(type approved for sale to citizens) it makes for a group of channels that the FEDS can use in any area of the USA with out the frequency congestion you find any where else. The older MIL/ MARS / CAP VHF channels do not have much traffic on them (139-150 MHz) . The Mass shutdown of bases in the USA has resulted in an empty spectrum in the 395-400 Mhz , and parts of the 139-150 MHZ that were in use by the bases now closed for good.
The ** OPEN ** receivers such as an ICOM R2 with the A7 (government sale only) works, also the AN/WSC-3 and maybe the AN/URC-52 would work in receiving.
NOTE expect digital traffic on the 395 - 400 MHz band, I doubt that a clear FM channel will be used.
Hope this helps

Total Traffic is Traffic.com. They will be using this channel for traffic reports to radio stations. The field report traffic will still be on 464.200. This means there is a radio in Transtar as well.

From: kc5vlz
Topic: 1726 Message: 1755

Total Traffic is owned by Clear Channel Communications. Traffic.Com is owned by Mobility Technologies, two seperate companies. Total and Traffic.com are in a partnership in Houston. Total does all the Clear Channel Radio Stations, and Traffic.com is doing the Cox stations. Mobile units are a combination of both Total and Traffic.com reporters. Traffic.com has the Transtar reporter who is doing feeds for Total Traffic on KTRH. Total traffic started up so quickly that it did not have time to set up a full operation. They have partnered with Traffic.com to help provide those resources since Traffic.com has been in town since November, 2000 and has a position is Transtar (which takes an act of God to get into).

The Total Traffic repeater is at the 1400ft level on the Senior Road Tower

No field reporting can take place on 464.200 since it is a business (IG)channel and not an Remote Pickup (RP) Channel. The powers that be know this and will not be doing reports from there.

Also notice that the MVN channel has gotten very busy lately (450.4875).

That is Clear Channel's own traffic company....
It was underway in Dallas before I left there..
and 450.2125 is still licensed to KHMX....its on Senior Rd at 1400ft...Since MIX is owned by CC and the rptr is hardly used, why not? Too bad they sold the old MICOR that was there that had the autopatch on it...I loved using it back in the 90s! :)

If anyone here listens to HPD southeast mic on night shift, you are aware of 'POPS'. He recently retired just approx 3 months ago.

He passed two days ago. 13D41N (13-Dan-41-Nights)

He was a great officer and will be missed.

Just got back from his funeral. It was a great turn-out to see so many officers and family there of whom lives he touched. He was on the department 38 years and was worth twice that much in experience and heart.

From: blklab97
Topic: 1765 Message: 1766

The aren't on mics (designated areas) like PD. Or are they?

I always listened to dispatched calls, goto:
http://www.clarc.org/~kg5ai/freqs/hou_freq.html

This list was just updated on 1/9/02. Use search for "FIRE HOUSTON"
This shows the different channels used.

From: kf5nd
Topic: 1767 Message: 1767

Hello from FM529 and Barker-Cypress Road (Copperfield).

I just joined the group, am using my Yaesu amateur HT to monitor non-ham activities.

Would like to know if there's anyone in my local area who has run into interesting things to listen to that are not published on the published Houston-area frequency list.

73,
Pete KF5ND

1768. Harris County Trunk System

From: Myles Barkman
Topic: 1 Message: 1768

Doesn't sound like the Coast Guard is using OEM-1 anymore. Anyone know if they are on their own talkgroup or if they are using some other radio system?
Has anyone listened to these folks using talkgroups between 18096 and 18384? It is all parking garage stuff, some security and some gate operations. Does anyone know for sure what garages these are used for? I thought perhaps they were for garages in the medical center area. Sometimes, I hear some of the talkgroups affiliate on other systems like Baytown. This makes no sense for folks in the medical center area to be on the Baytown system so maybe my hypothesis is incorrect.

Still looking for some new talkgroups that were supposed to be coming up on the system:
Harris County Mutual Aid Channels 4 & 5
HCSO Districts 5 & 6
HCSO TAC 5 & 6
HC Fire TAC 1-5

Anyone ever hear activity on the "Persuit" talkgroups 18384 & 18416?

Can anyone who lives near the outer sites tell me what talkgroups are primarily heard on just those remote sites and not normally heard on the downtown site?
For instance, I hardly hear Humble on the downtown site, and I assume they are primarily heard on the Huffman site, or maybe Tamina.
There are some Webster and Pearland talkgroups I hear usually on the Alvin site, usually public works.

From: bpckty1@webtv.net
Topic: 1769 Message: 1769

Garages and Security are the Texas Medical Center.

Pursuit, from what I have been told, is Chambers County, but when all HC Sheriff radios are programmed, will come on line for use in long pursuits.

The same is true for the new dispatch and tac talkgroups. They will come on line when they come on line. They are currently disabled by the Radio Service, so, unless you can pry the information from the techs (impossible to do, I've been told), we will just have to wait until they come on line.

As for what the Coast Guard is using, who knows? There has been talk about some digital comms being tested by the Radio Service. Maybe some of these digital talkgroups are now active and are being used in the Ship Channel area. Perhaps those in the Baytown/Dickinson/Alvin areas may have luck, at least by noting some "silent" transmissions.

Forgot to add, Humble PD uses 2 Conventional frequencies: Conventional 1 (Dispatch) 867.2125 and Conventional 2 (TAC) 867.7375. If I remember correctly, they use PL 156.7. Both Fire and EMS have been heard on Conv 2.

Tough Call. Myles' lists cover just about everything in the Houston area. You can submit your findings, though. Every little "nugget" helps.

But, your area is ripe for many types of communications: Cy-Fair VFD and ISD, Cy-Creek EMS, Northwest VFD (Hockley area -- US 290 around North Mason is always active), Klein VFD, Willowbrook Mall, the various country clubs (yes, even golf courses have their moments, maybe even the PGA and Tiger Woods). Just keep your scanner working and your ears listening. You will be surprised by what you will hear.

But, remember the caveats of the old and new radio laws. Don't repeat what you hear, although you can give a general summary (Police pursuit heard last night on Sheriff/Constable talkgroup xxxxx. It went from City x to County y, yada, yada, yada, etc.) Above all, keep law enforcement activities you hear mum, until later, and use discretion as to what you report. Remember, lives are at stake. Look at the previous posts in the archives for guidance.

Happy Scanning,

Ben

From: Christopher (Chris) W. Boone
Topic: 1774 Message: 1779

Its a closed private system.....all control is done via the rptr
inputs OR the link channels.....I know the following are Dillo
channels: 443.625, 443.65, 443.925 and 443.95 (443.975 is in
Huntsville)...Dillo is affiliated with the Cactus Intertie network
(connecting California with most of SW US and some other areas...
as Worf's father said...I have all the technical specs, etc at home :)

There are other open link systems..one is the Texas Repeater System
which I am president of (www.texasrepeatersystem.org)....444.3 in
Houston is our local rptr (PA is sick and its maybe doing 100MILLIwatts)
but it will also be linked back to Conroe and then on to Beaumont
and then eventually Dallas and other locations.

From what I understand, the Armadillo repeater system
is VERY closed. Not any Joe Ham can gain usage of
that system. They wish to keep "undesireables" out.
You have to know someone who operates on the system to
be nominated.

1790. Scanner News Stories Wanted

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-18 06:23:02 UTC
From: Champ
Topic: 1790 Message: 1790

I would like to invite all of you to join my new Yahoo Scanner News Story Group.http://groups.yahoo.com/group/Scanner_News_Stories/

This group allows people from across the U.S. & Canada to post interesting news articles from Radio, Print, or TV Media that represent some part of the Scanner Hobby.

You will see what I mean by the first posting that was made.

I think this can be a very interesting group with the amount of activity that goes on throught both Countries.

Sorry for cross posting through many of the groups, but with a group like this, I wanted to try and reach out to as many people as possible that are interested in the scanner hobby.

So please don't flame any of the groups for this posting. Thanks for your understanding.

Hello All,

Just to let you know what to keep your scanners peeled to:

Rodeo - Brown and Root 900 system, UHF, VHF, Wireless Mics, FRS!
Rodeo Cookoff, Rodeo Parade
Mardi Gras - Harris County Trunk, Galveston County Trunk, DPS, UHF, VHF, FRS!
Lots of events going on at the GRB.

Circ de Solei(?) is in town. Do they use any RF?

I would love see posts on what everone comes up with this year.
Lots of Business activity on LTR, Anyone that has a newer Uniden or Radio Shack Scanner Post some LTR talkgroups!! Lots of Plants use LTR!

.....on a side note

Feel free to direct any Armadillo Intertie Questions to me @ maito:mholland@... !! There is currenty at least 3 members on the list!

Mike

1795. Trunking scanner buyer needs advice.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-19 01:14:44 UTC
From: whm7
Topic: 1795 Message: 1795

I am in the market for a handheld trunking scanner. RS has the PRO-93 marked down at a sale price, but the catalog does not detail what systems it is enabled to properly track. Wonder why not?

(Consider that I am a novice at trunking even though I have had scanners since the earliest crystal controlled units. I even had a Bearcat 101 binary programmable!)

The PRO-92 follows Motorolla I, II, I/II, GE/Ericson and LTR.
The PRO-94 catalog specs include the above except LTR.

I am tempted to get the cheaper PRO-93, but don't want to miss the boat if it will leave out some capability. Can the experienced members of the group share comments?

Thanks

Here's the link (sorry, it's long) ...

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D523

If that doesn't work, go here and type "PRO-93" in the search box ...

http://www.radioshack.com/searchplus.asp

Make sure the hyphen is included. Read the fine print at the bottom which says Moto I/II and EDACS (no LTR) so it may be roughly similar to the BC245XLT. Check out the reviews on www.strongsignals.net to be sure.

Good luck,
Rick

From: mtrmn2222
Topic: 1795 Message: 1800

I bought the PRO-93 three weeks ago and I am happy with it.

I am happy for a couple of reasons.
First,you only have to enter data freqs for the trunk mode. Once the data channels are entered, and you hit scan, the 93 goes to work. On my old PRO-90 every freq associated with the trunked must be entered.
Second,you can scan and receive trunked & conventional freqs at the same time. Really helpfull for monitoring those funny ham guys & the P.D.
And last, you can monitor two different trunked systems simultaneously. For example I can monitor the county system and the city system at the same time. They are both Motorola sytems but have different data
channels.

Basically.....I'm happy with the features, performance, and price.
The PRO-90 was a good learning tool for trunking. The 93 puts several nice features into one package.

Thanks for the thoughtful comments regarding your experience.

I live in the Beaumont/Jefferson County area and am not sure if I need the LTR capabilities of the other model that offers it. Is LTR widely used?

There are lots of ltr sytems around in the 450 mhz area and in 800mhz. LTR is widely used by
businesses-rarely will you find pd's fd's etc using it. But you can find some interesting comms
on ltr systems, such as wreckers, private ambulances, security companies and no telling who else.
Maybe even that plumber you called to come by and fix the leak at your house that hasn't showed
up yet.

What I think you are referring to with "Tango, India, Lima, Charlie", etc. is the map page. Houston Fire/EMS and I believe Life flight use that particular phonetic alphabet. They are referring to the Harris County Key Map page and block. 583 Lima would be on page 583 in block L.

There's a relatively inexpensive way to link repeaters
together. I can't remember the name of the link
controller, but it's under $300.

Their rptrs are all linked via RF right now...mostly links in the low UHF band or 900MHz band...
though there may be some 1.2GHz links also...
Our system uses the same setup....we have link paths in the 420 segment (low power and directional) that links the sites together....it is a backbone and fullduplex so any site in the system
can control any other site....We use Linkcomm; other systems use LinkComm or Cactus Intertie capatible controllers...(using preaccess codes)

Linking as we do takes a controller capable of it PLUS link radios and duplexers if one link antenna is used per path...

I am not so sure about your key map theory.

Most LZ locations are given in GPS coordinates and therfore the ETA to the LZ.

I have not looked up the keymap locations, but.....I have a doubt.

Thanks

1811. [Pro-2067] 800 MHz Sensitivity ??

Yahoo group: HoustonScan (1999 — 2002)

From: Tracy Kujawa
Topic: 1297 Message: 1811

I scan from Beltway 8 and Katy Freeway...using a 2067. I get great reception on all bands except 800... when I try to follow the Harris Co. trunk I get terrible reception. Sound quality is bad, drops conversations, have to open squelch almost all the way just to receive. Even on close traffic I get no better reception. I'm using an RS Outdoor antenna...(220-176) and 20ft coax. Any suggestions on better 800MHz reception?? Would a signal amplifier help?? I would think that I am close enough to get good reception as I get all other bands good. I would appreciate any hints on solving my delima.

Thanks
Tracy

The phonetics and numbers used are part of an index system that Lifeflight uses to indicate their load in terms of remaining fuel and persons on board. They have a card that tells them which letters and numbers to use as well as if they have two people up front (repeat the letter) as in 'Golf-Golf 4'. After they refuel and are topped off, you will hear them call 'Lima'. If you hear them down near 'Alpha', they are on fumes. Sometimes, you will hear them give the actual fuel reading in pounds or gallons.

I also recall hearing Life Flight report the landings as "Hotel" or "Charlie" - meaning "hot" as
in keeping the engine running or "cold" as in shutting down...

Which system are you trying to track? From that area, you should be able to hear the Clodine site and the downtown site.
Some things that might keep you from getting a good signal are Nextel and Cell phone towers. I find that when I'm driving within about 3/4 of a mile from a cell site, it can wipe out my 800 band.
In this situation, less is better. You may have better reception using just the telescopic antenna that came with the scanner.
If you have an attenuator, you may even turn that on. It sounds backwards but when dealing with consumer grade wide-band receivers that can easily have their 'front-ends' swamped by strong in-band or even out-of-band signals, you may just want less signal and hope all you get is the frequency you are actually tuned to.
Only other thing to do is try to use some sort of band-pass filter to knock out freqs above and below the band you want.
But since the cell phone band is butted right up against the 866-869 MHz public safety band (which is where much of the county trunked system resides), and Nextel is interspersed between the normal 851-866 MHz freqs, that may not be a viable option either.
The best way to receive trunked systems without being overloaded by these other services is with a real honest-to-god 800 transceiver.

1815. signal on 439.2125 MHz?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-24 04:41:51 UTC
From: Myles Barkman
Topic: 1815 Message: 1815

On my way home from work today, I was searching through the ham bands when I heard a signal on 439.2125 MHz. It was just a carrier with light audio on it. On turning up the volume, it sounded like audio from a radio station.
I thought maybe I was close to a remote in the 450 or 455 MHz band. I found nothing in those bands.
I flipped through the radio dial and found the audio on Sunny 99.1. Now car radios can put out some signals that can be picked up on your scanner so I turned the car radio off but still heard the signal on 439.2125.
Can anyone else hear this around town or was this some strange anomaly on my ham rig. This rig has good image and intermod rejection so usually when it picks up a signal, it is not bogus.

Hi Tracy,

Crazy as this may sound ...

1. try turning the radio's attenuate feature ON ...
2. try using a cheap "rubber duck" style antenna

I often find that #1 helps on my BC245XLT. My theory is
that it helps the receiver cope with the increased background
noise/interference from nearby cell towers that are also in
the 800Mhz range.

Ditto Myles.
I might also add that the squelch on this radio is rather tight. Even at threshold the signal can get choppy if its weak or fades any at all.
There is a fairly simple squelch mod that will help "loosen" the squelch control. If you need it let me know.
On the other hand, moving your outside ant a few feet may help-800 signals can be tricky at times.
Be sure to try just the back of set ant and/or the attenuator feature as (like Myles said) you may be getting some desensing from a nearby cell phone tower or Nextel tower

My sister used to be a Life Flight attendant/medical personell
person or whatever you call em (EMS).

I will ask what codes they use for:
destinations/origins
In flight codes, air unit codes (fuel,time,speed)
Patient info (status,injuries,drugs,treaments)
Landing zones/coordination/accident site communications
Phonetics and their use (Piolt,co-pilot,personell onboard)
Anything else? I am SURE I missed a bunch...

For you hams and non-hams.

The National Weather Service in Houston/Galveston is conducting Skywarn training tonight at Transtar located at 6922 Old Katy Rd near Washington and I-10 in West Houston.

Starts at 7PM and runs to almost 10PM.

This is mostly for severe weather spotters, emergency managers, public safety and media but is open to the general public.

For more info, visit the NWS Houston/Galveston web page.

That's right Myles.

I live near Cypresswood and I-45 north. I can receive the Tomball, Tamina, and Huffman systems very easily. However, I can't receive the downtown system.

Here's the strange part. I used to work at an office park near I-45 noth and Beltway 8, just west of Bush Intercontinental airport. I could receive the downtown system perfectly.

I guess you can only receive the downtown system if you're inside Beltway 8. Once you get outside of the beltway, you're stuck with the satellite sites. Sometimes that's a good thing.

One thing to remember is that when the first and second phase of Smartzone came on line, the county lowered the power on the downtown site. The county now has to worry about frequency reuse do to the fact that they are running out of channels to use. With a new Pearland site coming on-line soon and talk of a liberty county site, the county has to start thinking like a cell phone company and trade higher power for better spectrum efficiency.

should be able to hear the Clodine site and the downtown site.Some
things that might keep you from getting a good signal are Nextel and
Cell phone towers. I find that when I'm driving within about 3/4 of
a mile from a cell site, it can wipe out my 800 band.In this
situation, less is better. You may have better reception using just
the telescopic antenna that came with the scanner.If you have an
attenuator, you may even turn that on. It sounds backwards but when
dealing with consumer grade wide-band receivers that can easily have
their 'front-ends' swamped by strong in-band or even out-of-band
signals, you may just want less signal and hope all you get is the
frequency you are actually tuned to.Only other thing to do is try to
use some sort of band-pass filter to knock out freqs above and below
the band you want.But since the cell phone band is butted right up
against the 866-869 MHz public safety band (which is where much of
the county trunked system resides), and Nextel is interspersed
between the normal 851-866 MHz freqs, that may not be a viable option
either.The best way to receive trunked systems without being
overloaded by these other services is with a real honest-to-god 800
transceiver.----------

From: bpckty1
Topic: 1297 Message: 1824

Tracy,

The West Belt and the Katy Freeway area is notorious for dead spots for the Harris County 800 system. From what I've been told, the Motorolas work fairly well, since they are designed to do so, but handhelds do sometimes find dead spots when inside buildings/houses. But, with scanners, because of the tall buildings and pine trees between Downtown/Galleria/Town and Country areas and the beltway, and even S. Voss between San Felipe and Westheimer, the control channel(s) get lost often. Other problem areas I've noticed are the Northwest Freeway/Hollister/W.Tidwell area and, believe it or not, the Katy Freeway/Fry Rd/Mason Rd area. Although the Clodine tower is just a few miles south of this location, the control channel is often lost by several of my scanners until I get onto an overpass or move either east or west of the Fry Rd/Mason Rd area. This has occured when using either the rubber ducky antennae or various 800 MHz antennae. I have just accepted this as a fact of life for scanning in Houston.

Hope this helps.

Happy Scanning,

Ben

Re: Transmitter Power

I spoke with a (high ranked) Harris County Radio Tech the other day and asked him about the power settings. He said that when the system was Smart Net, they ran about 150 watts from the downtown sitein order to cover the entire county and beyond. But, when Smart Zone came on line, the system requirements dictated that the downtown site's power be reduced to the 100 watts that the satellite sites use, otherwise, the other sites would be overloaded and cause problems with the system.

Hope this helps.

Happy Scanning,

Ben

1826. Re: signal on 439.2125 MHz?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-24 20:51:09 UTC
From: bpckty1
Topic: 1815 Message: 1826

Sounds like a harmonic. I get that sometimes downtown on my
scanner, usually KMHX 96.
If the transmitter is located downtown, they have mucho power and
the poor scanner has to suffer. The same is true with Uniden
Scanners and the HFD Dispatch on 453.4250 and HPD on 460.4000.
Mucho power to clobber the scanner. My suggestion, which came from
a KTRK camera man, either disconnect the scanner when near downtown,
especially when in the Heights area, or get an in-line
switch/attenuator.

Hope this helps,

Happy Scanning,

Ben

What is the best site to listen to in Katy? I live in Katy and work in
Westchase off Beltway 8.
Also if I program these towers in my BC 780 does each site get the same TGs
assigned but different freqs?

1828. Crosby VFD repeater

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-24 23:33:08 UTC
From: Myles Barkman
Topic: 1828 Message: 1828

Sounds like Crosby has their repeater back. Just heard an announcement on
Highlands radio that Crosby EMS has their repeater back and can use it.
Looked it up and sure enough, there is now a valid license. Interesting
that is was valid as of November '01.
Freq is 151.100 MHz with 156.7 Hz PL.

1830. Squelch mod 2067

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-25 01:59:49 UTC
From: sly.debbie@verizon.net
Topic: 1830 Message: 1830

Here's the squelch mod for the pro-2067. You'll need a 3.3K ohm 1/4 wt resistor. You should be able to find easliy at Radio Shack. Personally I use a slightly lower value (2.2k works a little better for me). You may want to try a few different values between 3.3K and 1.5K to find what works best for you.
You'll of course need a small soldering iron.
This first mod is the soldered or permanent mod
The second one is not permanent or temp (no soldering)

Perm mod:
1) remove the side screws holding the case shell on and remove both top and bottom (be careful of the speaker wire)
2) Disconnect the speaker wire from the board
3) There is a ground strap that connects from the main board to the front panel, you want to remove that.
4) Disconnect the wide ribbon cable from the main board that connects to the front panel (There are 2 tabs you need to pull out to release the cable, make sure these are out when you re-attach it and push them back in once the cable is seated)
5)remove the bottom side screws holding the front panel on, losen the top screws.
6) Now you can tilt the front panel so you have better access to the squelch connector. Just solder the resistor on the 2 outside connectors and put everything back together.

Temp mod:
Take off the bottom cover. Locate the three wire connector on main board near volume & squelch pot marked "CN 305" Take 3.3k ohm resistor and shove one leg in each end of the plug on the sides of the orange and green wire. This will replicate the permanent squelch mod. If you like it, solder it in on the back side of the board. If you don't like it, take the resistor out without any trace of a modification.

Clodine and Downtown. Westlake FD-EMS, West I-10 FD, and West
Harris County EMS are affiliated with the Clodine tower (primary)
and the Downtown Houston tower (secondary). Thus, all traffic will
be on the Clodine tower. The Downtown tower will kick in when one
of the radios is close enough to affiliate with the Downtown tower.
But, program both of them into your scanner. Also, program in the
Tomball tower, most of the other west Harris County users (Sheriff,
Constables 4 and 5, Metro PD, Jersey Village PD) will be there, too.

> Also if I program these towers in my BC 780 does each site get the

what type of trunk system are you trying to program? Moto,edacs,ltr?
One thing the manual is not clear on is that after you enter in EACH freq for the trunk is that
you need to press and hold down the trunk key until you hear two beeps. A little "m' or "e" or
"l" will appear on the display. What specific questions do you have as your question is rather
broad?
I'll attach a general helpful 780 tips web site on the next reply.

Ok-maybe someone else can step in too thats more familiar with Montgomery co. I believe Montgomery Co is an edacs system. I don't know if Conroe pd is on the system too or not. The main
thing about edacs is that the freqs have to be entered in a certain order to work (trunk track)
right. If you haven't checked already-be sure to check Myles web site for freq info. (link below,the clarc.org site)
This scanner has a bit of a learning curve to it so don't give up!

1847. New Conroe 443.425 Repeater -* Correction*

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-26 11:47:06 UTC
From: KCØEJX - Andrew D. Hudanish
Topic: 1847 Message: 1847

The correct freq is 443.4250 / 448.4250 PL 203.5

The PL dev is a bit high, but I will get it changed as soon as my laptop is cured of it's power problems.

Thanks

Andrew KC?EJX

Date: 2002-01-28 03:44:57 UTC
From: Myles Barkman
Topic: 1677 Message: 1852

```
Here's Cy-Fair's main operating freqs:
1 453.600 PL 82.5 Primary Dispatch
2 461.325 PL 94.8 Unit to dispatch
3 453.350 PL 107.2 District 3 TAC
4 463.325 PL 151.4 District 1 TAC
5 461.950 PL 186.2 District 2 TAC
6 462.050 PL 210.7 Unit to unit

Don't know if these are all in operation and if the low-band will be gone
when these start up.
What of the paging link on 157.450 MHz? Will it continue?

BTW, my main web page is down.
Use the backup site listed below.
I'm uploading some new lists for the HCSO trunk and Houston freq list.

I am not sure if there are ANY LTR systems on UHF in use in the BPT area....I can check and see...I used
to work for a Johnson shop (Bartlett Electronics) and we were selling mobiles on one of the 1st LTR 800 MHz systems there....our shop had a number (8) of community rptrs on UHF that should have been trunked :) but then this was before technology allowed it....

Chris
WB5ITT
(PNG 76 grad, former telecom tech for Entergy/GSU....still own 444.5 Beaumont, 444.8 Conroe and
444.3 Houston)

I was in Humble and the repeater responded from my HT. But nobody
seems to be on the repeater. Anybody have more info?

TNX, Chris. It's always been a pleasure hearing input from your corner of the world. (I recall your active participation on the BBS's that comprised the world of computer telecomms waaaay back in the pre-WinDoze days of the 8088 and Wildcat bbs software. Truth be known, there has been an untold number of people in those early days that especially appreciated your efforts in providing the repeater facilities that rebroadcast the space shuttle communications that NASA broadcast for public concumption. Thanks again, Chris!)

Oh my Gawd Bill!!! Now we are going back to the old Fidonet days :)
(I was 1:106/4267 in Conroe for years; then a brief stint as a
1:124 node in Dallas...but I dropped Fidonet after 6 months there)
Geesh had no idea it was you!!!! Of course I still have an active UHF
444.5 rptr in Beaumont (linked fulltime to 444.8 in Conroe...which
is down right now for maintenance and upgrades but may be back on this
weekend...if I can get the antenna work done and shortly have it
linked back to 444.3 here in Houston which I just took over...its
at 750ft on the west end of town)

BTW the 147.56 shuttle freq in Beaumont is still active...that was
a joint thing by Steve Gomez KE5O and myself...later I also had same
freq in Conroe for shuttle...(could do that again I guess; I have the
equipment)...we started out on 147.555 (same freq as W1AW uses for
code practice, etc) but later moved up to 147.56 with the 20kHz
spacing alignment (which I had a hand in with both TX and now LA as
well!!)

Still get over to the home area once in a while...may be moving 444.5
there to a new site...(if all goes well)...

Dont forget the Orange hamfest last weekend of February...

I've been following the activities on:

Houston Fire Department A3- 453.6750
A4- 453.9500

Harris County Sheriff TAC 3- 12816
PATSU- 9328

Harris County Fire Marshal 1- 6512
3- 18832

Never did hear any conversations on Harris County OEM, 8336, although the Fire Marshal requested several items via them on Fire Marshal 1.

And, of course, the usual media frequencies were constantly abuzz until 7:00PM, when, of course, the evening newscasts were over.

Chemical Fire in South Houston? I just 30 minutes ago talked to a friend of mine in the police department there and he mentioned nothing of it, said it is kind of slow. Am I missign something? I am in Pasadena, right down the street from them, going to go turn on the Tv and see if I can find out what is up.
Brian.

Perhaps it would have been less confusing to have said "south Houston" instead of the proper name of the city "South Houston".
The fire was at a plant near 288 and the Tollway. Think HFD is in the clean-up stages now.
I don't hear HFD using up two channels on an incident very often. Fire-fighting traffic was on A3-453.675 with water supply on A4-453.950.
Don't know if Pearland came out to help.
Trust, me, if something big happens in South Houston, you would hear something (the *boom* plus all the units responding from Pasadena and Houston).
I don't think there is anything nasty enough in South Houston to cause a big incident unless a train happened to go up while going through.
Otherwise, the biggest chemical fires they get would be the grease fires in the restaurants. I don't think they would call Boots and Coots for that. :)
BTW, anyone have any frequency info for Boots and Coots?

Thanks, i just got that off the news, figured it out. On first reading the post I was surpirsed to have not heard of it from my friend. I just naturally think 'city of' when South Houston is mentioned, being so close to it and knowing people who work there. I did not think of it as a direction.
Seems to be a pretty nasty thing happening out there

1868. An idea to present to your local media affiliates

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-01-31 05:35:03 UTC
From: Champ
Topic: 1868 Message: 1868
Attachments: 1 described; binary payloads are missing from this source WARC

I would like everyone if they can to send the following letter or something like it to your local radio and tv stations, or newspaper office, to try and get more services like this throughout the U.S. & Canada With alot of people in these groups, if we can spread this out a little bit throughout these 2 countries to the media. Then more interesting sites will pop up that have either alerts or online scanners through the media. I have been only able to catch my interest in a select few.

I would also like your thoughts on this. Does this sound like a corny idea or do you think a letter like this would have an effect on news editors or webmasters for these stations. email me at the following owner-livescanneraudio@yahoogroups.com

Here is the attached letter folks. Oh and once again, sorry for the cross post.

Randy

I have thought of a wonderful idea for your tv station and or newspaper. KTLA (Http://ktla.com) in L.A. California always broadcasts live police chases along with other live incidents, fires', standoffs, etc. Along with many other tv stations out there.

It would be nice to see your tv station or newspaper have this sort of action too. KTLA in L.A. Calif. is one of the top tv stations there.

If you mix that along with alerts to people via email and pagers and cell phone pagers, you can increase your audience. If you want to know a little bit about what I'm talking about you should visit these sites. http://www.incidentpage.net or Http://www.pursuitwatch.com , it would be however be a bit better if they were free services though.

I think doing something like this would certainly pick up more ratings or readers for your region. Another good point to would be providing live scanner audio on the website also such as http://www.policescanner.com , that would totally enhance the site as well as your tv station or media. If you look at our group http://groups.yahoo.com/group/livescanneraudio you can learn how to do this at NO COST to your station or paper. I would think that your news dept. already has a scanner in it.

I hope you take these ideas into consideration, as they would in my mind bring in more viewers and readers, I know that if a station locally would have this sort of action, I would become more of a viewer or reader or listener.
I would think that in a Metro area like yours and surrounding areas, there would be plenty of action going on. Many of the sites below, do have some

chit chat about different incident's that do take place in your region.

Thank you for your consideration,

You can find pretty much everything you are looking for at
http://w5ac.tamu.edu/~kg5ai/freqs/hou_freq.html.
My primary web site is down until further notice.
I just got a new list of freqs for them and I'm still making updates to my
list.
I can send you a more complete list later on when I get a chance at home.

From: "Steve Uhrig" <steve@...>
Subject: Interoperability in Houston?

"Direct Link Now Reality for County, City Officers"

Houston Chronicle (01/22/02) P. A13; Schwartz, Matt

After several unsuccessful attempts to integrate city and county communications systems, Houston-area law enforcement agencies are closer to finding a solution that would allow them to communicate over the same frequency. Before, county deputies had to go through several hurdles before they could contact a Houston Police Department officer. Today, city and county officials who need back-up assistance can connect with an HPD officer through a "radio patch." Although the patch is only a temporary solution, it will buy time until local officials determine how to go about financing a permanent, integrated communications system. Officials estimate the expense of installing such a system could run as high as $70 million. (www.chron.com)

1878. Metro bus LTR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-04 03:43:41 UTC
From: Myles Barkman
Topic: 1878 Message: 1878

Metro is using some new (to me) freqs on their LTR system.
Their complete list of freqs is now:
856.3875
856.9125
857.3875
857.9125
858.3875
858.6875
858.9125
859.3875
859.9125
860.3875
They are using an LTR type of system that cannot be tracked using scanners available today.
I believe there is software you can use to control your scanner to track this type of system. Otherwise, you can just program them all in and scan them conventionally.
Only problem is, 860.3875 has a constant carrier on it (presumed data channel) and also carries voice traffic.
So unless you have a squelch that can resume on "dead carrier", you would have to lock this one out.

Really though, this system probably isn't too interesting to listen to anyway so I'm not going to lose any sleep over it but, HEY, you might be one of those people who enjoys listening to taxi and bus freqs, so enjoy!

1881. Chemical Plant Fire Last Week

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-06 02:18:29 UTC
From: jgohio
Topic: 1881 Message: 1881

I received somme intersting information about the chemical plant fire last week on the south side of town. The fire was a 2 alarm (2-11), 7 tap fire. Seven taps means 7 additional engine companies over the 2 alarms; the 2 alarms together should have brought approximately 8 engines. Its somewhat unusual to have that many taps. I was also told that the 7 taps were pulled all at the same time. Actually I don't think that the dispatch protocols go above 4 taps. (In the "old days" any number of taps could be pulled, just not more than 4 at once.) Another interesting thing was that the Incident Commander called for "7 taps and 5 taps." Five taps is an old signal for an additional ladder company but the dispatcher didn't pick up on this. The request was repeated a few minutes later in plain language. The reason for so many taps for engine companies was that the closest fire hydrant was quite a distance away and it was necessary to "relay pump." I noticed a post last week saying that the relay pumping was on one tac channel, other operations on another channel. I don't know that I've heard of 2 fire tac channels being used on the same incident before. Anyway it sounded like good listening and I hope some of yuo got to monitor it.

Exclusive: HISD Officers Battle Faulty Radios
School Board Member: Action Expected This Year
Posted: 2:00 p.m. CST February 5, 2002
Updated: 6:51 a.m. CST February 6, 2002

HOUSTON -- In an exclusive report Tuesday, the News2Houston Investigators uncovered that the Houston Independent School District's police officers are having to use faulty radios to provide security for the schools.
Every day, Houston Independent School District police officers are walking a tightrope.

On one side, dealing with dangerous problems. On the other, a faulty radio system that may not allow them to call for back-up when they need it.

"We've had gang fights, shots fired and we can't get a signal out," the first HISD officer said.

We spoke with two veteran HISD officers. Both asked to have their faces and voices disguised.

News2Houston Investigator Robert Arnold asked, "Have you ever been in a situation where there's real trouble and you've tried to get back-up and couldn't because of the radio?"

"Yes, a lot of us have," the first officer replied.

The trouble rests with the officers' hand-held radios. Their link to the outside world during a chase on foot or inside a school.

The problem they're having is similar to what we all experience with cell phones.

There are certain spots, called dead-zones, where the officers' radios can't transmit a signal.

For us it's inconvenient. For the HISD officers it's a life-threatening problem.

"Is it all over the district or just certain areas?" Arnold asked.

"No, it's all over the district," the second HISD officer said.

"Do you find yourself hesitating to take certain calls because you're worried whether you'll be able to use your radio to get back-up if you may need it?" Arnold asked.

"Yes," the second officer said.

"What do you do?" Arnold asked.

"If you have a cell phone, well, you use a cell phone," the first officer said.

"Does the district provide you with cell phones," Arnold asked.

"No," the first officer said.

"They need decent communication," Houston Federation of Teachers President Gayle Fallon said. "They do something dangerous and they don't need to be wandering the streets looking for a payphone."

Fallon is president of the teacher's union, which also represents HISD police officers.

Fallon said what's worse is this is not a new problem. In fact, officers have been complaining about this problem since 1994.

"They know about it," the second officer said. "They get tired of us complaining about it."

Fallon argues that the problem with the hand-held radios is not just a safety issue for the officers, it's a problem that could jeopardize student and teacher safety as well.

"When you have a child bleeding on the ground and you can't get immediate response," the first officer said. "I think that's a child issue."

"I can just picture a Columbine situation where their radio isn't working and they can't get back up from the local police," Fallon said.

This also brings to light another problem. Most HISD officers can't talk directly with Houston police officers.

"If it's at night in a building, or outside of a building and it's very dark," the second officer said. "We could run into each other. We don't know when they arrive, they don't know where we're at and it can be very dangerous."

We then took the findings of our investigation to HISD School Board Member Jeff Shadwick.

"Have you ever heard that this was a problem?" Arnold asked.

"No, as far as I know and I was president of the board last year and as far back as I can remember I never heard an issue about that before," Shadwick said.

Yet, we discovered a memo written by then superintendent Rod Paige, and sent to all school board members in 1999.

The memo outlined different employee groups' concerns for the upcoming school year.

On page three it stated, " HISD Police Department needs new radios. The current radios endanger their lives due to poor transmission." "Three years later, I'm still sitting in your office talking about this same issue. Did somebody drop the ball here on this?" Arnold asked.

"Well, I don't know," Shadwick said.

Shadwick said that since the problem wasn't raised at a full board meeting, he assumed it was fixed.

"So you just assumed it got taken care of?" Arnold asked.

"Yeah, and again I say we get stacks of those every week," Shadwick said.

"There is a problem," HISD spokeswoman Heather Browne said. "There has been a problem for some time and the district acknowledges that."

The district's Heather Browne blames the past HISD administration for allowing the problem to fester unresolved.

"But what we have to look at now is what are we going to do about it, and what are we doing about it," Browne said.

"Will you see to it that something is done one way or the other or is it going to be like with this, you'll just assume it was fixed?" Arnold asked.

"No, no I will," Shadwick said. "I mean why not."

Within twenty minutes of leaving our meeting with Shadwick he sent out a memo to HISD Superintendent Kaye Stripling asking what the district was going to do to correct the problem with the radios.

Prompted by our investigation HISD is now giving its assurances that this year the radio problem will be fixed.

In fact, the district has contracted with a consultant and ear-marked at least $350,000 to pay for the upgrade and installation of a new radio system.

A project that will begin the end of this school year or early summer.

Notice that the story said nothing about what system that was in use and why they had such bad coverage. Also didn't HISD license expire and was it ever renewed?

<< Notice that the story said nothing about what system that was in use and why they had such bad coverage. Also didn't HISD license expire and was it ever renewed? >>

And that they've had a link to HPD ch 5 (citywide) for a few years. But, as usual, nobody (on either end) has ever been told how/when to use it.

As an additional piece of trivial, any HPD channels can be linked together. In a serious situation HISD (or Harris County, or even Montgomery County, not sure about Pasadena though) could dynamically regroup whatever TG their Officer/Deputy is on to the link TG, then we could link CW and whatever patrol area they are in together. Viola, every talking to each other. It's just a matter of doing a little training ahead of time.

>Subject: [TrunkCom] BC 245 Batteries

>I remember a post a while back about a company selling
>Nickel-Metal Hydride batteries for the Bearcat 245 at a
>fairly reasonable price. If anyone remembers the
>company please let me know.

I have thumped this drum before, but it bears
repeating:

WalMart has four-packs of NiMH AA cells for about
$11.00. A few minutes with a soldering gun and some
cling wrap can yield a brand new super battery for the
BC245XLT. The required connector can be obtained free
from Radio Shack (if you ask nicely); simply clip a
BLACK connector from a battery in their recycled NiCd
box. Match the Uniden battery EXACTLY. The loose
cells (which do have positive-end "bumps") will power
my PRO-31, PRO-93, and BC60XLT.

More bang for the buck: This past weekend I bought 12
clearance cordless phone batteries (#PC901) at WalMart
(for which I keep a constant watch) at $.75 each. Each
battery yields 5 NiCd AA cells, 650 mAh each, with
solder tabs (which assist the construction of BC245
battery packs, or which may be easily peeled off,
giving "normal" cells for use in other scanners and
devices). This was 60 cells at 15 cents each; although
I have a home-made NiMH pack in my BC245XLT now, I
probably will not buy another package of cells, since
the convenience of a handful of charged-up replacement
batteries is wonderful. Especially for pennies apiece!

Not sure about all that. Montgomery County is EDACS (own system), HISD is EDACS (own system), and HPD is on their own thing. THe Harris County system can link to HPD but that's about it.

But the linking is a new thing isn't it? I wasn't like that say 1 year ago this time right?

I bet you ask any HPD officer now if you can communicate with say the Constables or HCSO and they will say no.

From: bpckty1
Topic: 1416 Message: 1891

HPD B3, aka 525, (460.5250) is the link from HPD to the Harris County Talkgroup, HPD-1, which is usually up and connected. Sometimes,however, the link is broken.

But, training, and knowledge is lacking. Most county and HPD officers do not know that this link exists, but for those that do, it is a useful tool.

Often, however, whenever some officers on the County side attempt to communicate with HPD, an HPD Tac Team supervisor/officer gets upset that someone is using "their" long range car-car channel. So, now some county (constable/sheriff/and other agencies)departments have purchased HPD radios to get around this problem (HCCO-5, for example has HPD radios in their cars. HCSD, depending on the district, has Fort Bend County Sheriff, Humble PD-conventional system, PDs/Constables on the Harris County System, and Pasadena PD radios in their car/handheld radios). And, I HAVE spoken with several officers from various agencies that are unaware of this link, and most have informed me that their supervisors have told them to use only the channels that they routinely use.

A sad, short story as an example: Several times, a few years ago, shortly after the county went 800, I have heard a certain HPD Tac Unit Sergeant order a county unit which was trying to connect with a SW patrol unit to coordinate their activities to acate "their channel" and to have the county dispatch contact city dispatch to have the city unit meet the county unit at a specified location. (Sorry for the Run-on sentence. Mrs. Ragsdale, please forgive me.)

But, a happy, short story as another example: I have heard this link used as it should. About the time the link became available, the wife of an HPD officer was abducted in the Spring area. HPD, including Fox, and HCSD District 1 coordinated their activities on this link, which resulted in the successful recovery of the officer's wife.

If only all users were aware of this valuable tool. Unfortunately, not all do, and often, the link is down for whatever reason. My guess, the phone line is down.

I hope this helps in explaining what I know about the link, and I hope I did not ruffle too many feathers. I included the examples to show how ignorance about how the system works can cause ill feelings amongst the various agencies.

Hopefully, when HPD and Harris County are on the same system (yes, I've heard the rumors, and my source says it is nearer than we

think) things will smooth out a bit.

Happy scanning,

Ben

From: Myles Barkman
Topic: 1892 Message: 1892

HISD did get a new license for their EDACS system. The old callsign doesn't even exist in records anymore.
Their system does have a couple of links to UHF repeaters.
One is to the campus security freq of 452.050 MHz. I'm not really sure who uses this and why they don't have HISD 800 radios.
I wonder what the article was in reference to-the 800 system or this repeater.
The other link is to HPD A5 Citywide 460.425 MHz. All HISD Police should be able to get this channel. The folks using the 452 repeater would not have a way to "link" to HPD, BUT, you would think they could get HPD freqs programmed into those radio since it is all UHF. Maybe they can't trust the 452 folks with HPD stuff.

The Harris County trunked system has several links tied to it for fire department and EMS use, but only one police frequency-HPD B3 460.525 MHz. Talkgroup 6544 does not seem to be linked all the time. Not sure who has control over this. I have heard this talkgroup linked to A5 460.425 Citywide before as well. (Actually, Pearland PD has their dispatcher linked out on 155.970 MHz as well.)

The City of Houston Department of Aviation EDACS trunk has linked their emergency announcement talkgroup to the City of Houston Motorola trunked system OEM talkgroup. So it is possible to tie an EDACS system into a Motorola system. They did this a couple of days following 9/11/01.

The Pasadena trunked system has a few conventional freqs tied into it.
They link their FIRE-1 to their old VHF primary on 154.010 MHz.
They link Fire Mutual Aid 154.280 MHz onto a talkgroup.
I've heard a talkgroup linked to CIMA channel 1 488.8875 but whatever UHF radio they were using did not have a PL decoder (or they weren't utilizing it) so they picked up interference from some station in Montgomery using the same freq. I haven't heard the link active for awhile now. Don't know if it can be turned on anytime or even who has the talkgroup in their radio.

The Galveston County trunked system has several links to Fire and EMS freqs in addition to 154.280 MHz which they call IMAS. Not sure if this is still in use. I haven't been listening to Galveston much lately.

Back to the HISD radio problem. Not knowing what system they are referring to makes it difficult to make a guess about the cause.
If they are complaining about the trunked system, note that the radio system is near the Bellaire area which is not exactly centered in the city of Houston.
Houston ISD covers quite an area. To reliably cover all of their territory, they may need to go to a simulcast system where there is about three systems spread across the city utilizing the same groups of frequencies transmitting

at the same time. This is about the only way to go since this area is already maxxed out on frequency real estate. Either that or locate the system downtown for best reception and install voter receivers.
The Motorola trunking system in Fort Worth has a four-site simulcast system and you can tell something sounds strange on the channel especially when you get midway between towers or outside Loop 820. It is a difficult system to maintain since the systems must be synchronized EXACTLY so there is little frequency beat. I think each site has a GPS receiver to figure out precise timing.
HFD uses simulcast systems on their channels as well. I'm sure you can hear the heterodyne on their channels.
HPD does not do this but they do have multiple voter receivers that "pick" the best signal from different sites monitoring the input.
You've probably heard this effect when you listen and there is an abrupt change in signal since they guy talking may have moved a few inches or tilted his hand-held radio and another tower started picking him up better. The system changed over to that tower in mid transmission and you (hopefully) hear him better now.

<< But the linking is a new thing isn't it? I wasn't like that say 1 year ago this time right?>>

Nope, we've had al ink with HCSO for several years. It broke for awhile, and was always hidden on CH B3 (with the cryptic label "525") but it's been there. It got lost for awhile when HCSO reprogrammed their radios (Nov of 99 I think) but then came back.

<>

Yes and No. We got a memo that it exists so everyone should know it exists. Nobody has yet bothered to tell us how exactly to use it. I know it is monitored on our end but I don't know about the county end. And I don't know what the label is on the county radios. The old link was channel B-3 on our radios, and was "HPD-1" on the county radios. No surprise we could never find each other.

We can send messages back and forth by MDT, but I can't send anything to their dispatcher and their patrol units can't send anything to mine. I can only send a message directly to one of their units and I have to have a specific unit #, I can't make a general inquiry about something going on or relay information over to them.

Combining a few posts here...

<< HPD B3, aka 525, (460.5250) is the link from HPD to the Harris County Talkgroup, HPD-1, which is usually up and connected. Sometimes,however, the link is broken. >>

It has recently (a month or two ago) been officially moved to Citywide. B3 still exists but is now just a repeated chat channel. If you need an xjob or want to know where everyone will be eating that night listen in..... In the daytime it is usually used by a variety of tac and radar units.

<<But, training, and knowledge is lacking. Most county and HPD officers do not know that this link exists, but for those that do, it is a useful tool. >>

And, hopefully, will be more useful now that it is monitored at both ends.

<< And, I HAVE spoken with several officers from various agencies that are unaware of this link, and most have informed me that their supervisors have told them to use only the channels that they routinely use.>>

I don't doubt it. There are people in Narcotics who seem to think Tac-2 is assigned for their use only.

<< HPD, including Fox, and HCSD District 1 coordinated their activities on this link, which resulted in the successful recovery of the officer's wife. >>

The helicopter guys are probably the biggest uses of the link, since they get called out all over the place. I think the biggest problem they had was getting our dispatcher to tell the other agency's dispatcher what channel to switch to. At time the citywide dispatcher would tell Fox (or other units too) not to switch to another channel so they could stay in touch with them (rather than just pick up the handheld radio that is at every console and switch it over and listen).

<< Hopefully, when HPD and Harris County are on the same system (yes, I've heard the rumors, and my source says it is nearer than we think) things will smooth out a bit. >>

When I went to the Command Staff meeting to talk about this issue (June 99) I found out a Request For Proposal had already been put out and they were taking bids. I know the county has been hot to link up to the city 800 system to get a little more spectrum, not sure what direction the new system will go. At a convention in Vegas a few years ago there was some discussion of the city trunking the existing UHF Fire/PD frequencies. Since they won't

even go to 12.5 spacing to give us more tac channels (which we sorely need...) I doubt this is realistic.

<<The other link is to HPD A5 Citywide 460.425 MHz. All HISD Police should be able to get this channel. The folks using the 452 repeater would not have a way to "link" to HPD, BUT, you would think they could get HPD freqs programmed into those radio since it is all UHF. Maybe they can't trust the 452 folks with HPD stuff.>>

I don't know exactly who at HISD uses the 452 stuff but it seems to me it would still be possible to link everyone together if HISD would (could...) regroup their 452 link to the HPD link and to whatever TG the HISD patrol guys are using at the time.

<<The City of Houston Department of Aviation EDACS trunk has linked their emergency announcement talkgroup to the City of Houston Motorola trunked system OEM talkgroup. So it is possible to tie an EDACS system into a Motorola system. They did this a couple of days following 9/11/01.>>

And, believe it or not, there is still no way for the HPD Airport Police to talk to any of the Aviation people. They have radios in the cars to talk to the tower, but they can't get Aviation.

1897. Power Outage downtown

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-07 18:06:05 UTC
From: Myles Barkman
Topic: 1897 Message: 1897

Did anyone hear what was going on with the power outage downtown yesterday afternoon?
How extensive was it, what caused it, how long did it last...?

When I tried scanning HPD freqs relating to the outage, I heard 460.425 key up every ten seconds with a beep.
I wonder if this is housed in one of the buildings that had an outage and that beep indicated that they were on emergency power.
Does anyone know if this is how it works?

Apparently, the Enron building was one of the buildings without power (I figured they just didn't pay their bill) and that people were trapped in elevators.

Not related to this was an Alert III issued for that plane with the engine fire at Bush.
I thought an Alert III was issued for plane crashes. This plane was on the taxiway getting ready for takeoff the way I understand it.
Can anyone give me a definition of an Alert II and Alert III and are these common terms across the country?

That explains why I heard Marathon Operations on HPD-1. I was wondering why?

> <<The other link is to HPD A5 Citywide 460.425 MHz. All HISD Police should be able to get this channel. Why did the Aviation Department go EDACS instead of Motorola? I thought the city was trying to unify its departments. This just adds a bit more confusion into the mix. And, one would think that the Airport PD/FD/and Airport Operations could talk on the same channel/talkgroup, if for no other reason than preparing for the just, thankfully, safely, landed Continental Express flight from Ellington at IAH.

Nice shot by Channel 13's helicopter...

The 452 frequency is repeated on HISD channel 3 and is used by the campus officers. Is is possible that they use the 452 frequency because the campus officers are not licensed peace officers? Perhaps someone more familiar with the HISD operations can enlighten us.

But, it would be nice to have, at the very least, the HPD district's radio frequency for the school's area programmed into the radios. And, as for the HISD patrol radios, adding the HPD talkgroups into the patrol radios shouldn't be too much of a technical problem.

Happy Scanning

Hey, Ed & the list...

Edward Lentz wrote:

> Not sure about all that. Montgomery County is EDACS (own system), HISD is EDACS (own system), and HPD is on their own thing. THe Harris County system can link to HPD but that's about it.

The last time I looked at a Montgomery County SO EDACS radio, they had a talk group labled as "HCSO LINK". I never did figure out if that was just a pipe dream for the future, or an actual
patch to a Harris County talk group.

HCSD definitely can use the link to contact HPD. Earlier this evening they contacted HPD on HPD-1/Citywide and requested units for an assist the officer call for a DPS trooper that they were enroute to.

Thanks, Steve, for the update, but now I have to reprogram several scanners' alphanumeric displays :^p

1902. Re: Alert III

Topic: 1897 Message: 1902

An Alert III is used for reports of an aircraft on fire as well as for crashes. My guess the reasoning is that a fire on an aircraft would present a serious hazard to life (I view that as a reasonable assumption)as would an aircraft crash. Just as a full "box" is pulled for any reported fire in a structure, a full aircraft assigment (Alert III) would be dispatched for any fire on a plane, even an engine fire. So far as I know Alert III is strictly Houston terminology; there is no nationally standardized terminology. I think other departments stratify their responses (similar to the I, II, and III levels) but the details vary from jurisdiction to jurisdiction.

From: Joshua Carroll
Topic: 1903 Message: 1903

On Myles' Galveston County list, it shows a set of frequencies, then a different set labeled

used for private calls: (,...,)

and

used for DVP: (,...,)

Should I program all these channels in the same trunk bank?

From: Myles Barkman
Topic: 1897 Message: 1904

I guess if I just searched the web, I would have answered my own question. It appears that the terms "Alert I, II, and III" are recognized terms across the country to define different levels of emergency status and response.

Alert I is a Station Standby, meaning an emergency condition *may* exist and that emergency equipment should be on standby at the station.--As an aside, this may be similar to when a large capacity plane would land at Easterwood Airport in College Station (like when the football team would be leaving or arriving) and the fire department would call a truck out there for an "Airport Standby". The airport did not have their own CFR equipment.

Alert II is a Runway Standby meaning that an aircraft is experiencing potential/major difficulty and that equipment should respond to designated standby points near the runway.

Alert III means respond directly to the aircraft. This is when the aircraft has experienced difficulty resulting in damage to the aircraft or injuries to the occupants.

This page gives similar descriptions of these terms as I've seen on other pages:

1905. Re: [HoustonScan] Galveston County Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-08 04:26:38 UTC
From: Myles Barkman
Topic: 1903 Message: 1905

From what I've observed, those frequencies are ONLY used for private call/DVP. If all you want to track are two-way conversations on talkgroups, then you don't need to bother entering those freqs. If you have a scanner capable of getting private calls and you want to hear those, you can also enter in those freqs.
No one has a scanner that can decode DVP encryption so there is no real need to bother with those.

Big caveat here!!!
It is possible that in times of very busy radio traffic and the system is being used more than normal for talkgroup traffic, that those freqs I said were for private call and DVP only may come into play for regular talkgroup traffic.
It doesn't hurt to have all the freqs plugged in and I would recommend that you do just to make sure you don't miss anything, especially when the system is so busy that it needs those "extra" freqs.

The only reason you may want to omit those freqs is if you are hurting for space in your scanner and you can get by with programming in those particular freqs and not miss much.

1907. New PRO-93 Experiences

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-09 18:53:11 UTC
From: Joe Hathaway
Topic: 1907 Message: 1907

I am so pleased with my PRO-93 adventure to date that I just have to share some of it!

1. I bought a version 1.00 in Midland, Texas, wore out a finger tip partially programming it, and was sure that my BC245XLT now had a big brother that was a keeper.

2. I downloaded the freeware Win93 software just made available. (Author of Win93: Bless you and your descendants for a thousand times a thousand years!).

3. Rather than bidding on one of the Casio Boss FA-126 software+cable packages on eBay, I opted to "Buy Now" at $10.00 delivered. It arrived several days later. (Now I guess I should buy a Boss on eBay; I have the software and the book!)

4. A few days shy of my 30 days, I swapped the v. 1.00 for a v. 1.01 at the same RS store.

5. The RS employee patiently allowed me to check the version of the new unit, then loaned me a patch cord while I cloned the new one. I reinitialized the trade-in, advised him that selling it again would just complicate his life, and bought a wall-wart, a $.97 Universal Case, and the two required cable tip adapters (so they had something to gain from the whole transaction).

6. Having read endless messages about software problems, missing files, etc., it was with some trepidation that I found the only open matching socket on the back of my 'puter and plugged the new cable into the Windows 98 CPU and the PRO-93. Shazaam! Absolutely first swing, it's out of the park: I'm happily uploading and downloading frequencies, Bank Tags, Talkgroup ID Tags, setups, etc. What a rush! (I've never experimented with any computer control of the BC245XLT.)

7. As I mentioned previously, I just bought 60 NiCd 650 mAh AAs at WalMart for 15 cents apiece, so I should be one happy camper for at least as long as it actually takes for the BC250D to come out! [And I'm just going to ignore the fact that the elves at GRE omitted the ability to lock out pesky talkgroup IDs in the "Open"

(search) mode; I'll use the 245 to find new groups.]

I will be pleased to reply to any comments on or off
this list. Thanks to everyone who posted anything that
added to my knowledge over the past two years!

From: Leslie Bartosh
Topic: 1907 Message: 1908

Hello All:
I really must echo Joe's experience.
I bought a Pro 93 version 1.00 knowing about the text bug.
I like the scanner. I have debated on selling the one I have only because of the "bug(s)" but it works great!
A lot of verstility and coverage for the money. I think I can live with the text bug. There are not that many frequencies and alfa tags that I want to enter. I primarily monitor mil air.
I also have the Win 93 software. I love it! I compare it to the ADMS software for the Yaesu VR 500. Simple and easy. I only had to buy a stereo to mono adapter to be able to use the VR500 cable with the 93.
I also have a BC245. I have not found any software for it that is as easy to use as the Win93. For right now and probably the forseeable future the BC245 is relegated to using ID Tracker to find new talk groups! Yes the 93 is bigger, but I can live with that. Without any modifications the audio on the 93 is loud and clear enought to suit me. I say this with 47 year old ears that seem to failing as time goes on. Too many hours underneath vent hoods and too many concerts in my youth:).
I think the 93 overall is a great radio. Of course your mileage may vary.
Happy monitoring!
Leslie

Joe, your SIG says Midland. Are you in Houston area?
Just wondering. I have seen you in the Pro93 Group.

1912. Cinemark 18 Webster FOUND

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-10 03:08:43 UTC
From: Joshua Carroll
Topic: 1912 Message: 1912

Finally found the Cinemark 18 in Webster.

158.4000

Now, sometimes it would come up without a pl, others it would
come up as either 131.8 or 136.5. The 136.5 was used most of the time, but
once in awhile the 131.8, and I notice that they are one step away from
eachother.
I stayed in one place the whole time. Would where the transmission came
from make this small difference?
Should I even program a PL for this, I do get some data dxing from
somewhere.

Thanks.

Topic: 1912 Message: 1913

if you get 136.5 a lot then I'd also suspect dpl in use. Have you checked dpl codes too? Also I wonder if they are using motorola sp-10 handhelds? These particular radios have 16 channel
capability thats dip switch settable and the 158.400 is in the line up. I believe that the freq
is supposed to be for special industrial use not business.

I knew I was forgetting to check something (referring to the DPL)..
looks like that's something I'll do next weekend.

AMC and Cinemark use the same radios, Motorola SP-something, but AMC also had
some other smaller radios (dont know what those were)... most had two channels,
and only couple radios had three channels; Channel 1 was for everyone,
Channel 2 was for projectionists and security/police, and
I don't even know if Channel 3 was even used.

At Cinemark, the radios have 10 presents, but no matter which one you select, it
would be the same channel. Only one channel is used for the entire theater.
They might have just insterted one jumper or whatever and soldered the other
settings so that you would still transmit on that one frequency.

1917. Help programming a BC245XLT for frequencies in the Houston, TX area

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-10 13:33:15 UTC
From: rfdillon
Topic: 1917 Message: 1917

Folks, I was wondering if anyone had succcessfully set up their
BC245XLT for frquencies and trunking IDs for the following areas:

Harris County's Motorola system
Houston area Fire, PD, and other frequencies of interest in the
Northwest Houston (near Jersey Village) area
Montgomery County's EDACS 800 Mghz trunked system

If anyone has any of these areas successfully programmed, especially
the trunked ones, would it be possible for you to send me a file that
I could download to the scanner?

I have been able to do this partially, but, for example, on the
Montgomery County EDACS system I can hear the individual frequencies
(which I programmed in the order that I found on our Houston area
frequencies faq site), but when attempting to trunk, I get nothing.

Thanks so much in advance for your help, and please reply to
rfdillon@.... Thanks again!

1918. Re: New PRO-93 Experiences

From: joehathaway
Topic: 1907 Message: 1918

Yes, I AM in the Houston area (speaking globally). We do visit Katy several times a year, and usually manage to include some saltwater fishing near Galveston. However, we always beat a hasty retreat back to a normal atmosphere (where the water in the air is usually in single-digit percentages) as soon as we sense gill slits starting to form!

Seriously, this group comprises experienced, knowledgeable, generous scannists, and I have learned much from such groups in the past several years (although my first two-channel [dual front end] Minton "police radio" was in use with the Dallas Emergency Corps in 1959). Thanks again!

Joe

Just updated my CIMA page.
Also uploading a fresh version of the Houston Scanner list to BOTH my WebPages.
Problem with the update before was that even though my primary page was reachable with a web browser, I could not get FTP access to change them.
It is working again (now).

Tomorrow is Fat Tuesday. Last change to look for any Mardi Gras freqs/talkgroups in use. Has anyone been listening?

1924. Scanners on TV-The Drew Carey Show Wed night

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-13 04:12:13 UTC
From: sly.debbie@verizon.net
Topic: 1924 Message: 1924

A new episode of The Drew Carey Show, airing this Wednesday night (2/13) on
ABC will guest star both Jenny McCarthy and a Bearcat BC-895XLT (two pretty
impressive little numbers), along with the book, MONITOR AMERICA. Look for the
scanner and the book in the first scene of the show. Drew Carey will say how
great scanning is. Drew will also call the 895 a "top-of-the-line police
scanner," and the audience (knowing of course that the 780XLT is the top of
the line) will laugh. :)

Of course the real joke is on the producers who have no idea that Cleveland
runs digital!

1925. Control Channels Rotating?

Do the Harris County Control Channels rotate? I have heard that in some systems they do. I mean that on one given day a control channel may be at 868.xxx and the next day its now at 868.yyy. Not 868.xxx is a voice channel.

Any info appreciated.

1926. RE: [HoustonScan] Control Channels Rotating?

From: cboone@earthlink.net
Topic: 1925 Message: 1926

Motorola SmartZone systems can change control channels...this is done so the control channel does not run 24 hrs a day/7days a week. They can be set in software to change at various times....Depends on whether they have enough channels to support this feature...

On Entergy/GSU's SmartZone system, some of our sites did not change control channels because we only had 4 channels at some sites....(of course there IS a backup control channel so if the primary goes down, it changes to the backup...but when the primary radio returns to service, it takes over as control channel)..and then we also had to compete with the interference from Houston channels (HL&P and others).....Our Navasota site had to be changed 3 times until we finally got it to work properly with mobiles to the east trying to affiliate.

Chris
(former Sr Telecom tech Entergy/GSU)

Did anyone catch Ch.11 KHOU news tonight (weds)? Was there any story mentioning Texas A&M or College Station? Had Ch11 up here today for something. Heard some security team (on a simplex freq) talking about "Ch.11 news is at the gate". I don't know who the security is so if something was watching news could tell me where specifically where they were.

TAM ran a story on the lost on the left, those who the very idea of valentines is a reminder of the personal hardship they have suffered. So This lost in life group has decided to hijack the idea of romance they could never have and replace the idea of romance, with the idea that sex of any kind is RAPE, that any male female relationship can only lead to domestic violence.

bottom line. the misfits are out of place and unhappy and they wish to share.

Oh yea, the student fund will most likely be expected to fund this wayward group of lost soles.

Ch 11 was covering the groupd who are visiting the TAM campus. This group
wants FEB14 to be observed as VDAY .

They wish to say that Domestic Violence awareness should eclipse the former
14 FEB romance

Yes.

I look at it a time or two per day from Ohio. Reasonable good info
but with a quirk or two you need to understand if you want to know
exactly whats going on. Nowhere near as good as a scanner but no
matter how high I raise my antenna I don't seem to be able to pull in
HFD.

1941. Help!!! understanding the Harris County Trunked Motorola system

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-17 14:24:24 UTC
From: rfdillon
Topic: 1941 Message: 1941

Folks, I'm trying to understand how to input the Harris County Trunked system into my BC245XLT scanner. I have one bank completely filled with the Harris County Frequencies from the downtown antenna. I have ~90 talk groups for that bank.
My question is this: As no other frequencies will fit in that bank (it is completely filled) and I'd have to put the outlying area trunked frequencies in other banks (e.g Tomball, Clodine, Huffman, etc.) do I need the other area's frequencies inputted into other banks? I had thought of putting the Tomball frequencies into another bank, and then I'd probably have to duplicate the ~90 talk groups into that bank as well. Am I doing this right, and does someone else have their scanner set up to pick up the Harris County Trunked system that would be able to tell me how to do it? Thanks so much in advance, and please reply to rfdillon@.... Thanks!

From: blklab97
Topic: 1946 Message: 1946

Should I attempt to enter ALL sites (clodine,alvin,huffman etc.) for
a trunking scanner or is simply the downtown site frequencies enough?

1949. Area correlation to Harris County talk groups and frequencies

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-20 01:41:06 UTC
From: rfdillon
Topic: 1949 Message: 1949

Does anyone know of a map or key or something that would correlate the Harris County talk groups (e.g. the various Harris County Sheriff agencies)or HFD and HPD frequencies with a map of some sort? I am attempting to find the talk groups and frequencies of agencies which are most near my home (near the race track at beltway 8 and Fairbanks N. Houston) and office ((near Greenway Plaza), and really don't know where to start. Myles' most excellent compendium of frequencies is overwhelming, and I would like to be able to concentrate on scanning those agencies closest to my home and office. Any help is GREATLY appreciated, TIA, and please reply to rfdillon@....

If it was me and I had a radio that I could dedicate to the Harris County system I'd do that. In fact, I just did with a new PRO-93 from Rat Shack. Now I can drive anywhere in the County and monitor the area that I am in. Downtown site only goes out just past the Sam Houston Stoleway.

I live in Friendswood, and I only entered the Alvin & Baytown sites, because I only use the HC Trunk for Alvin, Pearland, & Webster. I assume that if you wanted HPD, you would need the downtown site numbers. It will work, however, to just use one or two sites.

From: jgohio
Topic: 1949 Message: 1952

I might be able to offer a little help with the HFD part of your question. HFD frequencies are city wide. The main fire dispatch freq is A02, on serious fires they utilize tac channels A03 and A04. Ambulances are dispatched on A06. Check Myles list for the actual freqs. I am not aware of a map on line but there is a list of station locations at http://www.hfd.ci.houston.tx.us follow the links to "About HFD" then "Station Locations." Learning the nearby stations makes listening a lot more interesting. Also, on all fire and ambualnce dispatches they give a Key Map number, the Key Map is commercially available but pricey. If you didn't want to buy it but just got hold of a copy you could figure out the coordinates near your home and office. Your office is near the HFD boundary of districts 28 and 6 with the next closest districts being 21, 8, and 46. Districts refer to District Chiefs and are the first companies designated when a structural fire ("box" in FD lingo) is dispatched. Nearest engines 3, 16, 28, 37, 11. I'm not familiar with the companies near your home.
The book Police Call available at Radio Shack has the Houston Police districts (seperate freqs for diffrent parts of the city and an explanation of unit numbers. If similaar info is availaable on the web maybe someone else can give yu a URL.
Sorry but I can't be of any help with the trunking questions.
Hope you have good scanning.

Huh? I don't think the downtown site numbers will get you any HPD traffic - they are not on the
trunked system...

Chris Parris

Huh? I don't think the downtown site numbers will get you any HPD traffic - they are not on the
trunked system...

I see I made an error in my post since I did not make myself clear.

I mean is downtown frequency traffic also duplicated in the outlying areas? I guess it would seem weird for Alvin PD to be also transmitted on the dowtown antenna/frequecy. In that fact, Alvin PD is only transmitted on the Alvin antenna right? What about other talkgroups such as District Attny etc...

I also see from KG5AI website:
Note: The Chambers County trunk system has been phased into the Harris County trunk system. Their site is being microwaved into the Baytown site.

So Chambers county can be heard on the Baytown frequencies right?

I'm pretty sure that traffic from the outlying sites is not duplicated to the downtown site, although I'm not sure about the other way around. I'm also assuming it is correct to assume that you can hear Chambers County on the Baytown site, although it would make more sense for them to be on the Chambers site. Anyone monitor this area?

IF the system is Motorola SmartZone, I can help explain it...(as a tech who helped install of the largest SmartZone systems in the US at the time back in 1995-96...Entergy's, covering 4 states with over 150 sites)

A SmartZone system will NOT transmit ALL Talkgroups on ALL sites! This is a poor use of resources....A SMARTZone system will "smartly" bring traffic to that site which has a mobile on a talkgroup which has affiliated with that site...

Lets take a 3 site system; site A is downtown, site B is east side, site C is west side of town...a mobile on TG 1 moves from East to West.. TG 1 is normally HOMED on Site B (east side)...as the mobile drives from east to downtown, traffic on TG 1 is ONLY heard on site B...(assuming no user on TG1 are active on any other site)....As the mobile enters site A's coverage, once the signal from Site A is stronger than B, the mobile switches to site A (affiliates)...the unit leaves Site B and suddenly the Zone controller starts putting TG1 traffic on site A as well as B!
Now the mobile drives on to the west.....Eventually getting in range of Site C and when ITS signal is better than site A (this setting can be overridden by programming in the mobile by the tech..not the user), the mobile leaves site A and goes to site C....NOW site A (assuming no other user on TG1 is affiliated) QUITS xmitting TG 1 on that site....Site C starts carrying TG1 traffic.....
When the mobile/user is turned off, site C will QUIT carrying TG1 traffic since noone else is affiliated on that site with the TG...

THERE IS a way in the Zone controller to have certain TGs be xmitted on ALL sites regardless of whether a user is affiliated...BUT THIS USES resources and is NOT an efficient use of the system.....NOTE the scan feature on the MOBILE/portable user does NOT cause those channels to be active on a site they are not already...ONLY the main channel they are using (whatever their display shows as rcv AND xmit) is the affiliated TG....so a mobile on site B affiliated on TG1 but scanning TG 2 and 3 (which are also active on site B) will only hear TG1 tfc when affiliating with site A IF NO OTHER user is affiliated on that site with the other TGs... Their radio will be scanning TGs 2 and 3...but there will be NO tfc there since noone is affiliated....IF they shift THEIR radio to Tg2 or 3 then they WILL be the affiliated user for THAT TG Only...and TG1 will go away!

At Entergy, we had TG 29 as a interZone TG (analog connection between all 8 of the Zone Controllers which covered the 4 states)..it was merely an analog audio path with PTT being provided by 2175HZ tone boards out of an old Motorola CEEB unit...Motorola said it could not be done...yeah right! We showed it could....and then enabled TG29 on a few of the main sites so no matter where the user went, they COULD scan TG29 if needed and hear the tfc EVEN if they were affiliated on their primary TG....(telecom and a few

other depts used this a lot)....

A SmartZone system has a system map which HOMES the user's radio to specific sites....At Entergy, we had 128 TGs active...and 10 simplex conv talkaround channels to be used when in convoy mode and not wanting to tie up the trunk system.....Also the HOME groups also specifies which SITES the radio will search out first...if the 1st site is dead or in site only trunking, it can be forced to look at the other sites to see if they are active and available; thus keeping the user in the Zone configuration and able to communicate with other users on other sites.

Whew!!! Hope that helps (to think I went to a 4 day training class on this back in 96 :)....thats the basics....

SOOOOO just because Chambers is tied in, dont expect THEIR traffic to be heard on a site close to YOU.....That aint how SmartZone works...

Actually, the HPD website has maps of all of their police beats. The problem is, they have a separate map for each beat, which means a lot of maps (dozens at least). You can print out the beat text descriptions (the streets that form the boundaries) for about ten beats at a time. I printed these out, purchased a five dollar Rand McNally map of Houston, took a marker, and drew the beats on the map. It took about an our, but it was worth it.

On a related note, I dabble in GIS (Geographic Information Systems) as another of my hobbies, and I saw on the Harris County GIS website that they have a shapefile for HPD beats. You can view shapefiles on your computer using the free ArcView program. However, the link to the HPD beats shapefile is not active, so I can't download it. If someone has knows someone who works for Harris County, perhaps they can get the file. Then people could make their own maps using ArcView. Harris County does offer the shapefiles for all of the constable precincts and the Harris County SO beats.

Subject: [HoustonScan] Re: HFD info

I might be able to offer a little help with the HFD part of your question. HFD frequencies are city wide. The main fire dispatch freq is A02, on serious fires they utilize tac channels A03 and A04. Ambulances are dispatched on A06. Check Myles list for the actual freqs. I am not aware of a map on line but there is a list of station locations at http://www.hfd.ci.houston.tx.us follow the links to "About HFD" then "Station Locations." Learning the nearby stations makes listening a lot more interesting. Also, on all fire and ambualnce dispatches they give a Key Map number, the Key Map is commercially available but pricey. If you didn't want to buy it but just got hold of a copy you could figure out the coordinates near your home and office. Your office is near the HFD boundary of districts 28 and 6 with the next closest districts being 21, 8, and 46. Districts refer to District Chiefs and are the first companies designated when a structural fire ("box" in FD lingo) is dispatched. Nearest engines 3, 16, 28, 37, 11. I'm not familiar with the companies near your home.
The book Police Call available at Radio Shack has the Houston Police districts (seperate freqs for diffrent parts of the city and an explanation of unit numbers. If similaar info is availaable on

the web maybe someone else can give yu a URL.
Sorry but I can't be of any help with the trunking questions.
Hope you have good scanning.

The downtown site transmits all traffic. Baytown site does carry Chamber County Traffic along with the Huffman site. The Huffman site carries traffic from Baytown and to West of I-45.

As long as there is a unit in the SmartZone site with a certain talkgroup that site will carry traffic from that SmartZone site.

Keep hearing Metro Bus traffic for the Rodeo on the Huffman site since they are using the Humble Park and Ride.

Well, if you want to get technical about it... :-)

TG6544 is a link to HPD B3 - 460.525 mHz. There was some discussions of this link and links to
the HISD radios a few weeks ago. This link is seldom used the way it was intended, but normal HPD
patrol traffic is not carried on the Harris County trunked system.

Well that answered ALOT of questions. Thank you very much.
I am between Alvin and Freindswood. I actually hear Clodine from
time to time. I have a Pro-93 and when I programmed the radio I did
it like this.

Bank1 -Harris County
Channels are tagged as
HC Trunk DT (downtown freq)
HC Trunk AL (Alvin)
HC Trunk CL (Clodine)
HC Trunk BT (Baytown)
etc...

I RCV mostly DT traffic as displayed and depending on talkgroups I
get some tagged IDs that I put in to test my setup. I don't have
many baytown hits. I RCV many non tagged 'MOT ID' since each bank
only holds 100 IDs. I do travel to my mother-in-laws house near Lake
Livingston so I want the north side as well.

I guess since there are SO MANY talkgroups, I need to organize them
depending on antenna location which I need to map out now and make
banks like Harris Co N, Harris Co S, Harris Co E, Harris Co W. As
well I can get at least 400 talkgroups in so even if its nothing I
am intrested in, I can at least identify them. This radio has plenty
of talkgroup ID tagging.

I guess this don't mean much here but its just my programming plan
for it.

That's the City / County link. Used to be Ch B3, now it's A5 (citywide).

From: Myles Barkman
Topic: 1967 Message: 1967

Just got wind of this.
The International Space station will fly overhead in less than an hour. It should be visible given the rare clear sky conditions.
Look to the northeast about 6:53pm and watch for a bright white light moving across the sky starting at 6:55.
It will be directly overhead at 6:58pm.
It will hit the shadow of the earth in the southeast sky around 7:02. It will appear to just vanish. Don't worry, it's still there, it just can't see the sun anymore.

You can see if the astronauts are talking to hams on the earth by listening on 145.800 MHz. Listen for the callsign NA1SS. That's the space station.
If you hear data bursts, they are using packet which is like a modem on the radio.

Anyway, on to radio stuff.
There is a new amateur repeater up in the Houston area.
443.600 (+) offset belongs to KC5TCT and is on a 200' tower in Channelview.
PL is 103.5 Hz and it is open.
It has a patch as well. Dale invites anyone (with the appropriate license) to use the machine.

The Clear Lake Amateur Radio Club (CLARC) is hosting tonight's Skywarn training session given by the National Weather Service.
It starts tonight at 7:00PM and is located at Webster Volunteer Fire station 17100 Texas Ave. Their repeater is on 442.750 MHz with 103.5 Hz tone for talk-in.

As far as Chambers County on STARNET goes, I'm not 100% sure of the microwave link. So I don't know if Chambers County is separate from the Baytown site now or what.
I can't really listen to the Chambers County system itself to see if there is any activity that does not pop up on Baytown. There is an awful lot of Chambers County traffic coming through on the Baytown site. Is this because it is "hardwired" to the Baytown site or is it because LOTS of Chambers County units are affiliating to the Baytown site because it is better (?) than the Chambers County site in Anahuac?

I goofed. I should have said the space station would appear in the
northwest sky instead of the northeast.
If you tried to see it, hope you finally found it.
Not much to look at and the astronauts weren't talking to hams tonight but
it's cool that you could see it fly overhead on a clear night.
If you want to try seeing it some other time, check this site out for
opportunities in the Houston area.

Comes from the switch positions on the radios. A 1 - 8, B 1 - 8, C 1 - 8, etc. Depending on how many channels on the old radios. HFD radios were the same way.

It's a lot of things. I just knew it as B3, which is what the HPD called it. As Steve mentioned,
apparently the link to Harris County is now 460.425 mHz, Citywide or A5 or B5.

Chris

Here's how the HPD channels used to be. Steve, have they reprogrammed your radios lately??? The
letters refer to the "zones" of the radio, and each zone has 12 channels. Some models of hand-held radios have a little A, B and C switch to switch zones, others you change with the
keypad on the radio.

A01 - 460.325 mHz - North Central Dispatch
A02 - 460.125 mHz - Northeast Dispatch
A03 - 460.025 mHz - Southeast Dispatch
A04 - 460.050 mHz - Southwest Dispatch
A05 - 460.425 mHz - Citywide
A06 - 460.100 mHz - Central Dispatch
A07 - 460.350 mHz - Special Ops
A08 - 460.225 mHz - Direct (car-to-car simplex)
A09 - 460.550 mHz - South Central Dispatch
A10 - 460.450 mHz - Detectives
A11 - 460.475 mHz - Northwest Dispatch
A12 - 460.150 mHz - West Dispatch

B01 - 460.075 mHz - TAC 1
B02 - 460.375 mHz - TAC 2
B03 - 460.525 mHz -
B04 - 465.075 mHz -
B05 - 460.425 mHz - Citywide
B06 - 465.375 mHz
B07 - 460.350 mHz - Special Ops
B08 - 460.225 mHz - Direct
B09 - 460.400 mHz - Narcotics / CID
B10 - 453.700 mHz - IAH
B11 - 453.550 mHz - UHF Intercity

B12 - 453.900 mHz - HOU

Just an interesting side note. The City of Houston has picked Orbicom Consoles for their new dispatch center over the Motorola bid. Cap rock Services will be installing these in the next few months The only problem is they are going to use a T-1 to tie the Center to their RF Systems. Bad idea especially when those are some of the first to go down during a Hurricane or Tropical Storm.

I think it was last night or this morning I heard on the MAP Van
talkgroup announcing all morning shift units report to have their
radios reprogrammed.
Maybe it was a Metro-wide thing. At least for the STARNet users.
I'm curious anyway.

1978. Houston Railroad Frequencies

Howdy, everyone. :)

I just joined this group, and I thought I would list some of my favorite frequencies. I am an avid train buff (railfan).

73,

Paul Gray, N0JAA
Houston

Here's some Houston-area railroad frequencies that are commonly used (in MHz):

Burlington Northern Santa Fe Railway

160.560 Mykawa Intermodal Facility
161.160 Casey Yard
161.190 Houston/Galveston Subdivision

Union Pacific Railroad

160.365 Terminal Train Dispatcher 3
160.410 Palestine Subdivision (north of Conroe)
160.515 Beaumont and Galveston Subdivisions
160.605 PBX (autopatch)
160.665 Glidden Subdivision
160.740 Settegast Yard
160.770 Terminal Train Dispatcher 2
160.875 Lafayette Subdivision
160.950 Maintenance of Way PBX
160.995 Terminal Train Dispatcher 1
161.280 Strang Yard
161.400 Englewood Yard
161.445 Palestine (south of Conroe), Navasota and Eureka Subdivisions

Other Frequencies

160.380 Special Agents Repeater
160.305 Galveston Wharves
160.725 Texas City Terminal

1979. FYI Orange Hamfest tommorrow

The Orange Amateur Radio Club is proud to sponsor our
Annual Hamfest and Flea Market on Febraury 23, 2002,
8:00AM to 3:00PM. We welcome all.

Hamfest is located at the VFW Hall, on Hwy 87, 1 mile
North of I-10 in Orange, Texas.

NO charge for admission!!

Paved parking and lots of indoor tables. Tailgating will be
allowed, after the tables have been sold.

VE TESTING -testing will start at 10:00AM. No
pre-registering. If you plan to take the VE test, just come
on in with an original and a copy of your current FCC
license and any CSCE's. We have all the latest correct forms.

FOOD - Ladies of the VFW will have eats, soft drinks and
treats available for your purchase.

Swap tables are available inside the air conditioned VFW
Hall for $10.00 ea. for individuals and $15.00 ea. for
dealers. They may be reserved in advance by contacting
Joan Lexa at 409-886-1892 or email: wa5lfs@....
Tables must be reserved by Feb. 15, 2002. Unreserved
tables will be rented on a First-come/First-servered basis
when flea market setup begins at 7:00AM. Club reserves
the right to limit non-ham tables.

PRIZES - tickets can be purchased for the Grand Prize
and hourly prizes. Grand prize drawing at 2:30PM. Rules
for Drawings apply.

Talk-in Freq. - 147.180Mhz (PL will be off)
Also alternate talk in on 444.5 (100Hz PL) for Houston inbound tfc

(Also for hams in Houston, check out the new HoustonHam@...
list...)

All radios on the Harris County System are being reprogrammed.
Some radios are still SmartNet and are being converted to SmartZone;
and many users are having their radios reprogrammed with the same
talkgroups, but in a more "user-friendly" manner. I spoke with one
of the Map Van Deputies, and what the radio service has done is to
put their talkgroup into A-1 followed by the appropriate Metro PD
and Sheriff Department talkgroups on their radios, instead of having
them located on separate banks on the radios. It helps immensely
when your most used talkgroups/channels are located close together
and you don't have to look for them, especially at night.

Hope this helps.

Happy Scanning...

Just heard last night a new (to me) talkgroup on the Star-Net (Harris County) system.
19856 had Harris County Emergency Communications ("Harris County") talking to an ambulance.
Could not figure out which ambulance service it was but I've never been able to pin down South Lake Houston.
Think they are using some 800 MHz system.
Anyway, listen for it and see if you can ID it.
It could be a back channel.

We are looking for people out there that are willing to put a Houston Texas scanner online.

If you would like to do so, come and join our group over at Http://groups.yahoo.com/group/livescanneraudio and join the other members that have there scanner online.

1989. Active Houston Airwaves

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-23 09:17:44 UTC
From: dan3432@webtv.net
Topic: 1989 Message: 1989

Did anyone hear the chase HPD just finished at 2:45 am? They went from the southeast to the south, then were on the south loop west & then back south somewhere off of Yellowstone, where the suspects bailed & were caught with the assistance of Fox. It turned out to be a stolen car.
Around midnight, HFD had a 2-11 alarm fire in a nursing home on W. Bray(?) near Gessner. They evacuated the residents who were complaining of not being able to breathe, do to the heavy smoke.
And at 3:00 am, HFD had an apartment fire on Market St.

An interesting night!

Dan

Peace~out

Myles,
"Harris County" (HCEC) has a website at
http://www.hcec911.com with a link to their EMS services. Wonder if
that would help? There is a reference to the use of an "800 LTR
Trunk" in a posting last year (#1182 on 5-21-01). Wonder if they are
doing any fire dispatching on the trunked system. Anyone heard
anything?

From: Myles Barkman
Topic: 1994 Message: 1994

Made some changes to a list I have for folks that travel I-45 between
Houston and Dallas.
You can see the list here:
http://www.clarc.org/~kg5ai/freqs/hou-dfw.html

Also, just made a list of general state-wide frequencies used in Texas so
when you are traveling across this giant swath of land, you can keep this
bank of freqs active.
Suggestions are welcome as to other state-wide freqs that might be put in
this list. Keep in mind, I don't want to put too "area-specific" freqs in
here.
http://www.clarc.org/~kg5ai/freqs/texaswide.html

BTW, has anyone heard any new Texas Prison or DPS narrow-band freqs in use?

<<Color me dense, but I'd never seen radio channels designated as you have.
Is there a list I might view to understand better?>>

A1 460.325 North Command (aka "North Shepherd") Dists 3 and 6 "B" units
A2 460.125 Northeast Dists 7, 8, 9 and Kingwood Dist 24 "C" units
A3 460.025 Southeast Dists 13, 14 and Clear Lake Dist 12 "D" units
A4 460.050 Southwest Dists15, 16, 17 (aka "Beechnut") "E" units
A5 460.425 Citywide (also B5)
A6 460.100 Central Patrol Dists 1, 2 "A" units
A7 460.350 Special Ops ("SO") Acc units ("Z") Horses, bikes, etc downtown
("Y)
A8 460.225 Direct (also B8)
A9 460.550 South Central (10), Magnolia (11) "H" units
A10 460.45 Detective (also B1)
A11 460.475 Northwest Dists 4, 5 "F" units
A12 460.150 Westside Dists 18, 19, 20 "G"

B has lots of duplicates of A ...

B1 460.45 Detective
B2 460.375 Tac 1
B3 460.525 Old link to HCSO, now chat and surveillance
B4 460.075 Often misunderstood channel. It is programmed to received 460.075
and transmit on 465.375 on the patrol radios. Narcotics uses it programmed
slightly differently for surveillances (simplex on 460.075).
B5 460.425 Citywide
B6 465.375 Tac 2
B7 460.350 Special Ops
B8 460.225 Direct
B9 460.400 Label is simply "9B' Vice, Narcotics, CID
B10 453.7 IAH (linked to B12) "I" units
B11 453.55 Intercity (UHF) no PL tone
B12 453.9 Hobby (and Ellington) IAH "I" Hobby "J"

Others 453.65 Radio Shop R [123.0]
465.225 SWAT M* Channel C8 on their radios

All use PL 123.0 excet IAH which uses 127.3 (like HFD) due to interference
with an agency in Brazoria County (can't remember which one).

If anyone is interested I can throw some unit number info out there too.

Steve Casko

2004. Shell gets denied by the FCC

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-25 20:38:13 UTC
From: kc5vlz
Topic: 2004 Message: 2004

http://wireless.fcc.gov/releases/da02411.txt

Background:

Shell is looking to get out of the 450 band and up into T-band to get away from co-channel and adjacent channel interference. They are getting hammered on their digital system by analog interference.

One thing to note is that, yes, Police and Fire communications are a nessecity after 9/11, but lets not forget the life blood that feeds the American Machine...Oil and Gas. Oil and Gas and Guns and Hoses are considered critical infrastructure by the Federal Government. Yet, it does not show when oil and gas are trying to get frequencies to talk on for operations of a facility that feeds what the country runs on. Yet I feel that an exception would be made for the Guns and hoses boys. The FBI has done a great write-up on this.

My 2 cents.

Mike

2005. Re: [HoustonScan] HPD Info

From: Wayne Gresser
Topic: 2001 Message: 2005

For HPD monitoring, the Galleria mall is "westside" (460.150). However, points east of the 610
loop are "central" (460.100). The Galleria is located at Westheimer @ loop 610.

Some frequencies for the mall are:
Mall security - 463.4625 (pl 186.2)
Mall operations - 461.9375 (pl 114.8)
Mall maintenance/parking - 464.9375 (pl 250.3)
Westin Galleria Hotel - 464.800 (d156)
Westin Oaks Hotel - 461.975 (d731)

Frank,
As Wayne pointed out you will be right on the border between Westside and Central. You may want to also try Southwest. In case you didn't notice, the posting just previous to yours (#2001) had a rundown on HPD frequencies.
Happy scanning

Joe Gay

Apparently, the Galleria Mall was sold to a different company. Now that I look up the freq info posted here, I see that it is licensed to a "HG Shopping Centers LP".
The repeaters licensed to them are"
461.750
461.9375
463.4625
464.7375

I can't find who is licensed for the 464.9375 MHz frequency listed. In Harris County, it's mainly licensed to several different refineries for simplex use.
Are you sure this wasn't the 464.7375 freq listed in the license, Wayne?

<< > If anyone is interested I can throw some unit number info out
> there too.

Sure, why not while I'm updating my data. >>

OK, here goes. The beginning is from official material (with my comments) the second part is from memory (not nearly as reliable), and the third part is just general info to make it all easier to understand. Make this full screen and the formatting might work better.

Special Units Assigned by District (Downtown units)
Foot Beat (S.O.) Sector Y 20 Series
Roving (S.O. Early) Sector Y 30 Series
Roving (S.O. Late) Sector Y 40 Series
Mounted (S.O.) Sector Y 50 Series

Accident District Z As Assigned 1Z10, 2Z10, etc...
Park Patrol District P As Assigned 2P... (Park unit assigned to Dist 2 i.e. Memorial Park)
Radar (Patrol) 70 Div As Assigned
Weight (Patrol) 71 Div As Assigned Very rare, especially now with the new Truck Enforcement Unit.
Canine 73 K
Gang Units 90 Div as Assigned
Investigative Off. 91 Div As Assigned These are typically Tactical units, with some others thrown in.
Community Ser. 92 Div As Assigned This is Community Service, DRT, etc.
School Task Force 93 Div As Assigned Never used.
Radar Task Force 95 Z As Assigned
DWI Task Force 96 Z As Assigned
Traffic Safety 97 Z As Assigned Never used.
Hit and Run Detail 98 Z As Assigned
Solo Motorcycle 99 Z As Assigned

Fixed-Post Units
Desk 80 Div As Assigned Very rarely used.
Administrative 81 Div As Assigned Never used.
Crime Analysis 82 Div As Assigned Never used.
Security Post 86 Y As Assigned Never used.
Intoxilyzer/Video 84 Z As Assigned Never used.
Quality Control 83 Div As Assigned Never used.
Temporary Duty 85 Div As Assigned Never used.

Special Assignment
In-Service Training 87 Div As Assigned Never used.

"Div as Assigned" means they use the letter for that Division ("A" for Central, "B" for North, etc). "As Assigned" means they are given something similar to a beat number and use the Letter for that Division (Solos are all 99Z and use a 2 digit number on the end, Accident units use a District, a Z, and then just a 10 or 20 (if there are 2 for a District, very very rare)).

Speaking of Solos, they have their unit number on the back of their saddle bags. If you see one with an X in front of it that means that is not a regular Solo officer, he just uses that bike for extra-jobs (they numbers are on opposite saddle bags for the full-time and the extra-job guys but I can't remember which is which, just look for the X if you are curious).

4 digit unit #'s....
1000's Internal Affairs
1100's Auto Theft
1200's + 1300's Burglary and theft
1400's + 1500's Homicide
1600's Robbery
1700's Major Offenders
1800's CID (Mayor's drivers 1801, 2, and 3)
2100's Narcotics Supervisors
2200's Midlevel Narcotics (I think, or it's the 2000's)
2300's Vice
2800's Radio Techs
8400's + 8500's FTO's in take home cars (although they usually just use their regular unit #'s)
8600's + 8700's Narcotics

Many of the numbers used in the gaps in the middle are issued to other agencies that operate with us and have issued radios or radio numbers. If they have an issued radio they will use that, or more likely (for patrol type stuff) just use their agency name and their own unit number.

Sergeants are assigned 01 through 09 as the last digit (applies to all patrol and some investigative divisions).

For patrol units the even numbers work shifts starting on the even hours (6am-2pm, 2pm-10pm, 10pm-6am) and odd numbers work shifts starting on the odd hours (7am-3pm, 3pm-11pm, 11pm-7am). These are called "Early Side" (even hours) and "Late Side" (odd hours).

As an example 1A01 would be a Central Patrol Sergeant working late side.

Most patrol unit numbers have an attached letter at the end that you won't hear used "D" for days, "E" for evenings, "N" for nights. This is necessary since the unit numbers duplicate from shift to shift, but you will usually only hear it if someone is working late (occasionally a brand new officer being trained will say it).

The Chief is #2
The Mayor is #1 (Interesting that the Fire Chief is #1 on the Fire radios though...)
Captains have 2 digit radio numbers.

Lieutenants have 3 digit radio numbers.

Swat uses 900's with an "S" at the end and Dive Team uses 900's with a "D."

For most of the Patrol units you can tell where they work just from the District, but it's the other units (especially Tac and gang) where the letters really come in handy.

That's all I can think of off the top of my head. Any questions let me know and I'll see what I can find out.

Steve Casko
HPD Northeast Patrol
90C03 (used to be 8C05N)

People often find it easier to "Take time to deliberate, but
be a result of the past than a when the time for action arrives,
cause of the future. stop thinking and go in."
--Andrew Jackson
Build a man a fire, and he'll

I don't listen to the airports too much as I live too far away, but
some interesting comms are found on the "chit-chat/plane-plane"
frequencies:

122.7500
123.0250 - used in the city between helicoptors
123.4250
123.4500
123.4750

Approach/Departure, West:

123.8000

and, don't forget the emergency frequency of 121.5000

Happy Scanning...

2014. Metro bus dispatch on HCSO

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-26 13:30:43 UTC
From: Myles Barkman
Topic: 2014 Message: 2014

Confirmed this morning on way to work.
19376 on STAR-NET system is being used by Metro Bus dispatch.
Sure will add to the load on the system.

BTW, I'm trying to start referring to the "Harris County trunked system" more correctly as STAR-NET.
I think this is what everyone else refers to it as and I've changed many of my lists to reflect that.

Occasionally, you may see me or others still refer to it as the HCSO system, as long as we know we're all talking about the same system. STAR-NET is the system that encompases all remote Smart-Zone sites used by Harris County and many other agencies.

Myles and the Group,

Sorry about the typo. Yes, the correct maintenance frequency is 464.7375. Mall operations switched over to these frequencies about four months ago. I have not heard any activity on 461.750 as of yet.

That's the plan. As soon as testing is done and all radios (read: as money is available to purchase) are exchanged for the digital type radios.

Unknown as to when they will become active, but the districts should be roughly between US 290 and either IH-45 or the Hardy Toll Road.

If you look at a political map of Harris County, the Sheriff Department districts are drawn roughly along Justice of the Peace/Constable District boundaries, as well as the Houston City Limits. One of the current districts, District 4, for example, is in both Constable Precincts 4 and 5, Justice of the Peace 4 and 5. It seems logical, then, that the boundary lines be restructured and drawn along the precinct lines, as they were (more than) several years ago. And, since the Census has been completed, new lines have been drawn for the county officials, and an election is approaching, so, one would assume that the districts may come on line sometime later this year or early next year.

Hope this missive helps. If anyone knows any better information than my speculations, please advise.

Happy Scanning

Not entirly true!

The exsisting infrastructure is not all digital compatable. They are still replacing the MSF5000 800 stations with Quantars. A majority of the smaller cities will not switch to the 800 digital. They have too much invested in their analog equipment. The SO might have certain portions of their department go Astro, but not all. It is not cost effective at $2,500 to $3,500 per radio. Try telling Memorial Villages who just spent $1,000,000 to go 800 and it will now cost them to upgrade to digital an additional $2,000,000. That will not fly with the surrounding agencies. I have come under the impression lately that "Star-Net" is Southeast Texas' Nextel. Hogging channels and telling agencies to switch to their precious Samrtzone System so that they will have to be on their system to talk to anyone else in the area. That is what most people call strong arming. I wish some of these agencies would pull thir head out and see that UHF and VHF are still viable and reliable communications. Plus the fact that it is cost effective. The real test will be when the first big Hurricane comes to town! Keep your scanners peeled!!

Anyone who listens to both HPD and HCSO can plainly see that the county system is weaker than HPD's UHF. At least it is to me. I am located 610@290 and HPD is always full scale on my scanner compared to the county system which flucuates quite a bit. I also notice more cases of the county radios not hitting the repeaters.

I was told that many county Constable officers hate the 800 system. yeah its not as bad as simplex with one person at a time but they complain of a type of feedback sound when attempting to XMIT. I wonder if that is their radio not hitting a repeater. Does the FCC freq log show how many watts each transmitter is or is simply a matter of scattering at that freq?

2034. Galveston terrorism exercise

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-02-27 04:31:17 UTC
From: Myles Barkman
Topic: 2034 Message: 2034

Galveston County OEM is conducting a terrorism exercise March 5-7 from
8am-5pm.
I can't find anymore details about it and I'll be at work most of that time.
If anyone else is available to listen to the trunked system or some of the
conventional freqs down there, this would be a good time to tell what is
active and could be interesting listening.
Conventional:
151.115 City of Galveston
154.800 City of Galveston (Beach Patrol or other?)
155.055 Was Galveston County EMS (may not even exist now)
155.265 Galveston County OEM (was used in past)
158.775 City of Galveston (Beach Patrol-had been used during Mardi Gras)
450.5875 P.I.E.S.
453.100 Galveston County OEM (don't even know if this is used)
462.625 Galveston County OEM
464.500 repeater used in Galveston for Mardi Gras
145.410 Dickinson Amateur Radio

Thanks Wayne, Steve, Ken, Edward, Myles, Debbie, and
everyone else for the help with the frequencies for the Galleria
Mall, Hotels, and PD. (My company will be using the
Westin Galleria as our main convention hotel).

Now, for one last question: Does anyone know what specific
frequencies Freeman Decorating, AVW (the audio/visual
company in the hotels) and the hotel staff use on those little
black radios they carry around and use to communicate amongst
themselves and the staff of the convention hosting company?
I've seen the radios from a distance and they seem to have several
different channels to choose from.

I've done an FCC and google search and came up with various
frequencies within the 450's to 460's but nothing specific to the
Houston area. Do they use the same frequencies nationwide
or does each hotel/facility have their own? And are they actually
licensed or do they simply use dot or itinerant frequencies?

Just missed it. Do you know the feeling? I checked AI page and saw the 2-11 but got busy and forgot to check it again. My info on it is that it started in the NW corner of the complex with a 35 MPH north wind blowing. Started on the first floor which is bad because fiire spreads more easily up than down. The first in engine pulled the 2-11. Thats unusual; usually no "extra" alarms are not pulled until the District Chief arrives. The fire spread through breezeways connecting the different buildings of the complex. Apparently it burned all night and into the day today but its off the AI page now. There have been at least 2 previous multi-alarm fires at the complex, one of which I happened to respond to when I was in Houston on vacation, probably 5-6 years ago.

According to all the ads on tv and radio, Kohl's Department Stores will be having their grand opening in Houston on March 8. I did an FCC search and found the following frequencies for Kohl's in Corsicana. I don't know if this is for the warehouse or a store, and whether or not they use a simplex or repeater system. But, they seem to be a good starting point for a search, if one wants to get into the crush next Saturday...

Kohl's, Corsicana, TX

Earlier this week I saw a Village Police Officer, he was using a
Motorola MTS 2000 handheld radio. (And no, I was not getting a
ticket for going 1/2 mile per hour faster than the speeeeed limit on
S Voss.)

2046. IAH Disaster Drill

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-02 15:15:15 UTC
From: bpckty1
Topic: 2046 Message: 2046

The Disaster Drill started at about 9:02AM, Simulation Command, on HFD A-2, 453.5000, TAC A-4, 453.9500. A 727 with about 100 passengers, 40-50 injured made a low approach on Runway 26N, 17900 JFK. I have lost count as to how many HFD units have been sent.

If anyone near IAH is monitoring, is the drill on the Aviation Department Trunked, and what HPD frequencies are in use at the drill?

Happy Scanning

2049. Re: IAH Disaster Drill

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-02 17:30:04 UTC
From: bpckty1
Topic: 2046 Message: 2049

Finally heard City of Houston Emergency Operations Center as they terminated the drill, CoH talkgroup 32944. HPD IAH units on 453.9000 started coming into service, so they were probably on a TAC channel.

Never did hear Metro and their busses, but they do have a wierd system for scannists.

HFD reported that several VFDs from the northern Harris County area were providing EMS assistance, and one report stated that "victims" had been sent to, from my count, at least 5 area hospitals.

There were problems, as I'm sure they expected, since that is the purpose of the drills: Discover the problems now, not when it is too late to correct. One of the problems was with communications, especially with one handheld radio on A-4, but overall, the drill seemed to be very successful.

Personal Comments:

HPD Citywide would have been a good channel to use for the event. I'm not sure if HFD can be given access to this channel, since it is a law enforcement channel, but it would be nice for the command to have a linked frequency/talkgroup(s) between HFD, HPD, CoH EOC and Aviation departments, and the various VFDs. Some is now possible, since HPD Citywide and Harris County HPD-1 are now simulcast, if a Harris County radio is on HPD-1, and the VFDs are now getting Harris County SmartZone Radios.

And, one must have great sympathy for the "crash victims" since the cold front hit IAH about the time the drill began.

Happy Scanning

To All: Cy-Fair went Live on the UHF Ch's Friday March 01. 2002 at 4pm.
Knock on wood so far so good. See that last post's for the list of Ch's.
Great Coverage and Great Sounding Machines ("Gotta be a Kenwood!")

I would also like to take a minute to Thank all of the people who helped us
to make Erich Burrer's dream of going UHF a Reality. Erich is their
Communications Officer and a member of this group. Some of the people that
helped are also on this group and you know who you are.

Your Welcome Marvin.

- 157.450, PL 192.8 One Way Paging (Rebroadcast of 453.600 both Dispatcher and Field Units)

This channel is still in place. It is there Primary Paging channel. All of the Minitor pagers are on this frequency. It worked out well over low band and when "Bir M" Dropped the Minitor 2 low band pagers before releasing the minitor 3 low band we needed to do someting and we found this channel.

From: msuggs.geo
Topic: 2058 Message: 2062

Does anybody have a suggestion for a UHF mobile with 16 channels and scan? I'm using a scanner now and it picks up too much interference from HPD ch 10. Trying to monitor CyFair/Cypress Creek FD frequencies. Make/model/cost info who be greatly appreciated. Was also wondering if there's a ham radio that would work in the 453 mhz band and may be cheaper than a commercial unit. Also does anybody have a used radio that meets these specs?

Thanks,
Marvin Suggs

Does anyone know what the new West Harris County EMS pager frequency is? Their 155.2950 dispatch/pager frequency went to the West I-10 Fire Department for their pagers, and so far, all I have heard is the dispatches on the 800 system.

Thanx in advance,

Happy Scanning

2064. Galveston County system talkgroups

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-04 01:16:53 UTC
From: Joshua Carroll
Topic: 2064 Message: 2064

Decided to scan the Galveston County system for a couple of hours... found a couple new talkgroups and more info on existing talkgroups.

I have these listed first with what Myles' lists says, then I've added my info just below it.

50032 Galveston County S.O. South (Island) Dispatch
Someone said "I'll be out at Jamaica Beach w/pager"
51056 Galveston County S.O. - Reserve 1
Talk/B.S.
52208 Galveston PD - 1
Dispatch
52240 Galveston PD - 2
Vehicle Registration/Driver's License checks.
52272 Galveston PD - 3
TAC - Surveillence? (looking for someone around an apartment complex)
52304 Galveston PD - 4
Talk
52944 Galveston School District
heard "go to 2"
52976 Galveston (County?) School District-Safety?
same guys that were on talkgroup 52944, talking about a broken window they were going to clean up tommorow.
possible new name for this talkgroup is "Galveston School District 2 - Talk"
53232 Galveston pier?
Someone asked a group of people if they wanted a taxi, they refused, and the person on the other end said "we'll find out later when they reach the gate!" jokingly
54384 Rural Metro Galveston County Ambulance Ch 1
Dispatched to calls is Texas City and Dickinson
59440 "game room unlocked"?
heard nothing (just keyed up)

Now a couple of additions, just don't know what they are.

59984 NOT LISTED, NEW
"get ahold of mother yet", "possible visit for ___", could be a jail, don't know, just two conversations
56432 NOT LISTED, NEW
"checking an open gate" (no location given) "back in 10-8", possibly PD?

Now that I purchased a Pro-93 (but it's frigging version 1.00), I get better reception from Galveston County from my Webster

home that I didn't get with my 92.. so I'll be monitoring Galveston County once in awhile and will give updates.
If anyone else is in Galveston County (like Texas City, Dickinson, etc), please help us update this list since it hasn't been updated in awhile! :)

The Radio Shack 2067 will do PL/DPL tones and will solve your problem.

Another choice, call Advanced Communications on Katy Rd and they have new Standards that will work.

If you want I have an old ICOM U400 and V100 mobiles that I may be willing to sell. They are 16 channels transmit/receive.

2067. Re: [HoustonScan] UHF Mobile needed

There are a couple of radios that work in the 453 Mhz range that
can also be used in the amateur 70cm range...
For best results, you may want to use a commercial radio and
program you favorite ham freqs in it...

I would suggest the Midland XTR or Syntech II series...the XTR
is 22 or 99 channel (99 is optional) with excellent rcvr and
clean xmtr as well...the Fire channels could be programmed as rcv
only to prevent accidental xmit on the non ham channels...
I CAN program and service ALL Midland LMRs (Syntech I, II and XTR
series as well as most HandHelds)...you should be able to find
such a radio on Ebay or other places for less than $200...
I bought one off Ebay a few years back for only $75!

Ham gear used out of band tends to be subject to intermod or
poor rcv sensitivity....I have a Kenwood Tm742..it works ok BUT
out of the ham bands, the front end is bypassed and it hears
more IMD and with less on channel sensitivity than it does inside
the ham band...So I would not recommend it for serious rcv above
450 MHz ..

Chris
WB5ITT
Just down the road from the C-F VFD location on Hwy 6 :)

That's a tall order. I wasan't able to locate such a site but
maybe someone else has. You might be able to track down what you
need from the following site but it would be slow because the site
lists all freqs, not just FD.
http://www.cityfreq.com:81/tx/
Very incomplete lists appeared on each of the 2 sites below:
http://www.netutah.com/bbcropinson/texas/
http://www.members.optushome.com.au/extemescan/usa/texas_tx.html
(Note-there is an underline betwween texas and tx which sometimes
gets lost if the whole url gets underlined in the posting.)
I went looking for the same thing you're looking for last year
and my best resource was to pick through the sites on the
following "top 100 sites page. It was time consuming but thats how I
found HoustonScan and Myle's great frequency site. The top 100 site
is
http://topsitelists.com/bestsites/k4lyp/topsites.html
I hope I don't get banned from the site for being cyber
incorrect but I'd suggest the easiest route for what your looking for
would be to go down to Radio Shack and buy the book Police Call. You
can get it on CD on the net-I think the address is
http://www.scannermaster.com/products/software/policecall/screenshots.
php
maybe that will put me back in cyber good grace.
Good luck. If you find a good site, please post it.

Some of the better scanners out there have pl tone capabilities that may help you out (RS pro-2067 and Uniden 780xlt). Most 70cm ham rigs will rx out of band-usually up to 470mhz and many
have tone capabilities too. However their front end performance usually starts to drop the further away you get away form the ham band. At best they are no better than a scanner at image/intermod rejection out of band. If you want commercial grade performance then you'll have
to look in that direction. Ham rigs are a lot cheaper(1/2 to 1/3 the cost) than commercial rigs
(comparing new to new) but a used one could be had fairly reasonable. Not familair with commercail radio so I can't recommend any or what the going prices are used.

Date: 2002-03-05 01:52:41 UTC
From: Joshua Carroll
Topic: 2077 Message: 2077

Was off work today, so I searched the Galveston County trunk for awhile today...
more additions and findings :)

I work tommorow, so I cant monitor the terrorist exercise in Galveston county tommorow.

51216 Galveston County Constable 4
(was not confirmed as being heard on the list, but it was heard today)
52368 City of Galveston PD - 6
(was not confirmed as being heard on the list, but it was heard today)
55504 EMS patient reports to hospital (Rural Metro)?
(They were "enroute to Mainland", so it's more than likely Rural Metro.)
53680 ?Kemah Fire Department
(dispatched on 158.895, but did not simulcast on this talkgroup or any talkgroup)
53232 *Galveston piers?
("go to control room and get oxygen", "west end gates secure")
53264 *technicians, phones?
("tower phase one", "get my fleet map folder out of the office", NOT VERY ACTIVE)
56912 Texas City ISD
(at Santa Fe Elementry, don't know if it's the same district"
59856 city? Galveston? 1011 bayou rd liberty La Marque animal control "shelter"
(Many 10-13s in Santa Fe, Dickinson, San Leon, and South County. Likely Animal Control (rural metro?))
59984 city jail,?, boot camp "control"
("open Charlie 3 and Charlie 7, probably the jail)
60016 county jail "control"
(heard references to the dining hall)
60208 on list, no description
(city workers..VERY ACTIVE)
60336 on list, no description
(71st street sewer line, South Shore and Lefat intersection, water department, possibly San Leon?.. VERY ACTIVE)
61424 City of Texas City? Building Insp.?
(dispatch to Demontrond car dealer in Texas city to inspect water lines, possibly Texas City Building Inspectors)
62768 on list, no description

(students in D.A.R.E. office, most likely a middle
school, heard reference to 6th grader)
63120 on list, no description
(reference to Ave T and 19th)
63440 City of Galveston streets-barracades
(reference to signal problems needing repair)
63632 City of Galveston streets?
(reference to W Benavista (of Benevedes) St and the
Spanish Glenn Subdivision)
64112 on list, no description
(references to "conference room" and "chambers", might
be a courthouse)

Corrections from my findings yesterday:

52944 Galveston ISD Police Ch. 1
52976 Galveston ISD Police Ch. 2
The reason I say this is because they were making arrests and running
vehicles on Channel 1, then if they wanted
to BS, would switch to channel 2.

New findings today:
51952 "OEM Base clear", might be emergency management.
57840 School? "cosmetology department", "students in your office"
61456 Road crews near Blocker Middle School.
64304 Animal control? talk/BS channel
64176 Talked about permits belonging to UTMB at an empty lot at 401
Market st, probably a bulding inspector/planner.
64272 Building Inspectors/planners? Avenue K and Avenue F? San Leon?
Santa Fe?
63600 keyed up, no traffic
63312 city worker?, meter reader
63536 heard references to, "caution light on L board"

It was a major fire in the 1700 block of El Mar, I think it was the apartment complex (Miramar)..

Was listening at work so couldn't get too many details, but I know Pasadena and Webster were
involved because I heard Webster Fireground mention Seabrook and how to get to the fire.
They requested two pumpers and something else from Pasadena.

No I didn't get a chance to monitor Galveston County for the terrorism drill since I was in Deer
Park.

I did make some more observations and posted them, but yahoo groups was down and it didnt post..
so I'm fixing to repost.

(was not confirmed as being heard on the list, but it was heard today)
52368 City of Galveston PD - 6
(was not confirmed as being heard on the list, but it was heard today)
55504 EMS patient reports to hospital (Rural Metro)?
(They were "enroute to Mainland", so it's more than likely Rural Metro.)
53680 ?Kemah Fire Department
(dispatched on 158.895, but did not simulcast on this talkgroup or any talkgroup)
53232 *Galveston piers?
("go to control room and get oxygen", "west end gates secure")
53264 *technicians, phones?
("tower phase one", "get my fleet map folder out of the office", NOT VERY ACTIVE)
56912 Texas City ISD
(at Santa Fe Elementry, don't know if it's the same district)
59856 city? Galveston? 1011 bayou rd liberty La Marque animal control
(Many 10-13s in Santa Fe, Dickinson, San Leon, and South County. Likely Animal Control (rural metro?))
59984 city jail,?, boot camp "control"
("open Charlie 3 and Charlie 7, probably the jail)
60016 county jail "control"
(heard references to the dining hall)
60208 on list, no description
(city workers..VERY ACTIVE)
60336 on list, no description
(71st street sewer line, South Shore and Lefat intersection, water department, possibly San Leon?.. VERY ACTIVE)
61424 City of Texas City? Building Insp.?
(dispatch to Demontrond car dealer in Texas city to inspect water lines, possibly Texas City Building Inspectors)
62768 on list, no description
(students in D.A.R.E. office, most likely a middle school, heard reference to 6th grader)
63120 on list, no description
(reference to Ave T and 19th)

63440 City of Galveston streets-barracades
(reference to signal problems needing repair)
63632 City of Galveston streets?
(reference to W Benavista (of Benevedes) St and the Spanish
Glenn Subdivision)
64112 on list, no description
(references to "conference room" and "chambers", might
be a courthouse)

Corrections from my findings yesterday:

52944 Galveston ISD Police Ch. 1
52976 Galveston ISD Police Ch. 2
The reason I say this is because they were making arrests and running
vehicles on Channel 1, then if they wanted to BS, would switch to channel 2.

New findings today:
51952 "OEM Base clear", might be emergency management.
57840 School? "cosmetology department", "students in your office"
61456 Road crews near Blocker Middle School.
64304 Animal control? talk/BS channel
64176 Talked about permits belonging to UTMB at an empty lot at 401
Market st, probably a bulding inspector/planner.
64272 Building Inspectors/planners? Avenue K and Avenue F?
San Leon? Santa Fe?
63600 keyed up, no traffic
63312 city worker?, meter reader
63536 heard references to, "caution light on L board"

2082. Re: Galveston County Master lists

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-06 03:12:29 UTC
From: Joshua Carroll
Topic: 2082 Message: 2082

You can find Myles' list at

http://www.clarc.org/~kg5ai/freqs/galveston.html

Along with other lists at:

http://www.clarc.org/~kg5ai/freqs/freqs.html

I guess I'm the only one who lives close enough to pick up the Texas City repeater (Webster).
Sometimes the calls are weak, but I can at least get talkgroups and parts of conversations.
I'm rarely in Galveston county, when I am I'm driving on 146 to 646 to I45, so I cant very well
monitor talkgroups, unless I get bored one night and decide to just drive to Texas City and
sit in my car for an hour or so... if I do get a suspicious person call, I'll know about it and can leave! :)
It would better to be a Saturday night when the freaks are out.

I find the Pro-93 (my handheld is version 1.00/home unit is 1.03 since my girlfriend likes to know what's
going on in Webster) very helpful in finding talkgroups, because when a transmission is recieved,
the talkgroups stays on the screen afterwards (for how many seconds I set it to) so it gets me
time to write it down and possibly what I heard. My 92, which I use at work (in Deer Park) will stay on the
talkgroup, but it will dissapear and wait for another transmission.. so I have to wait and try and catch the
talkgroup number.

I'm not really good at finding new frequencies/repeaters... I don't know how to do that.
I say that because Myles' list has said that Friendswood is a proposed site for a Galveston County
transmitter, which would be GREAT since I'm right down the road.

New Topic: I see that a Pearland site is proposed for Harris County... that would do great too since
the Alvin site sometimes fades in and out. Sucks being in an apartment where I can hook up and
outside antenna to my base unit.

2083. New poll for HoustonScan

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-06 03:26:29 UTC
From: HoustonScan@yahoogroups.com
Topic: 2083 Message: 2083

Enter your vote today! A new poll has been created for the
HoustonScan group:

How do you your scanner(s)?

o Local use only, just want to know what's going on in my neck of the woods
o I monitor my home and surrounding area/suburbs
o I only turn on my scanner when I see a chase live on TV
o I search for new frequencies/talkgroups rarely/when I get a chance
o I search for new frequencies/talkgroups at least once a week
o I'm always looking for new frequencies/talkgroups
o If someone asks me if I can find something I'll tell them
o I like to contribute anything I can to improve the lists
o What's a frequency?
o What's a talkgroup?

To vote, please visit the following web page:

http://groups.yahoo.com/group/HoustonScan/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Im in Alvin. I still have yet to build a LVL 4 FSK. Do they still work? I want to hook it up to my Icom PCR-1000 and get groups like that. Is how you are getting group tags as well and from the Pro-93? I have one as well and love it. I just got a R10 and so far its nice. I read reviews of it which were lackluster. So far its decent and worth the money but I know there are better units out there.

2086. Ellington Field

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-07 01:22:01 UTC
From: hobbiecatt
Topic: 2086 Message: 2086

Just a quick note....5:30 today a lone Blue Angel F-18 did two touch and go's at Ellington field. FAST and LOW. I've never seen a solo at
Ellington before...possible cross country? Ellington has some great radio traffic to listen to. Also...we are going to Biloxi MS over spring break to drop some quarters in those silly machines. Anyone have a freq list of casinos and the local gvt? Thanks...happy scanning!

2089. RE: More Galveston County updates

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-07 13:17:41 UTC
From: Lindsay C. Blanton
Topic: 2077 Message: 2089

Hello HoustonScan!

If you've got good updates regarding Trunked radio systems in the Houston Metro area, please do submit your updates to trunkedradio.net.

The Trunked Radio database project is the largest collection of trunked radio data in the world, and we want to make sure that the data is up-to-date and accurate. We need your help to make sure that Houston's trunked radio data is kept accurate. Plus, the Texas portion of the database is by far the most complete collection of trunked radio data for the state of TX.

You can submit updated data for any system in the database by following on-line submission forms in the database interface.

See http://www.trunkedradio.net/db for more info.

Warm regards,

Lindsay

We saw that same jet fly over Pearland during my sons baseball practice.

Those yellow stripes really stand out in a blue sky.

The Angel came in from the north & headed towards Ellington.

We also thought it odd to see only one aircraft.

2095. "Done Right" for HPD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-09 02:41:54 UTC
From: jgohio
Topic: 2095 Message: 2095

Do those of you who monitor law enforcement pay much attention to these license checks? Sometimes something interesting happens. The following is big news here in Athens, Ohio where I live but unfortunately probably won't make the news at all in Houston.
A 62 year old woman was murdered in her home outside of Athens. Her car was missing. According to our local paper a Houston police officer noticed 2 young men in a 96 green Buick with Ohio plates and thought "that looks like an older person's car. He also notice a "Proud to be a Grandma" bumper sticker which also didn't exactly match the profile of the 2 young males in the car. The officer ran the plate which came up stolen so he made the stop. The 17 year old driver was the next door neighbor of the slain woman and he now becomes the leading suspect. Great initiative and great work by the Houston officer but I'm afraid in Houston no one will notice.
Back to my first question and more on topic for the site. Does HPD or any law enforcement agency in the area still run lisc and record checks by voice or is it all on the computer now? Has anyone else been monitoring long enough to remember when checks were run as a "606 and a 611" referring, I believe, to the phone extentions of the HPD warrants and records offices?
Anyway, HPD did some good work and people in Athens, Ohio appreciate it.

Joe Gay

Subject: [HoustonScan] Re: 3-11 HIgh Rise Fire

Dan,
Keep the updates comming. I am following the incident from Ohio on
HFD AI page and your postings. Not as good as a scanner but thats
what I get for moving out of town.

Thanks,
Joe Gay

No, for some reason the CAD always showed alarm level 1, even though the CAD listed the total number of units sent as 29 (plus 9 EMS units on a standby record)

I'm not an IPN Admin, but I wondered the same thing. I think the HFD AI page always showed the alarm level as "1" for some reason. I guess the routine that picks incidents off the AI page uses the alarm level to classify the incident.

I know Seabrook and Nassau Bay still do LP and license checks.
They usually go "28 - 29??" Then dispatch will say, "Go ahead (unit number)"
They they'll radio the License Plate and what type of car.. then
dispatch will give the return (make, model, registered owner, city), then if
they're being pulled over, will say what block/street they're at. Then will
get the occupant(s) license info over the air (license number, name
(spelled out) and DOB).. then dispatch runs the driver and comes back
with a current and clear, current with (x amount of) entries, and of course, any
warrants.

I think La Porte and Deer Park also do this, but not too sure.

I also saw it as a 3-11 on AI around 7:30am. It was "downgraded" around 8:30. Wonder if it downgrades when they tap the fire out? Seems like this may have also happened a couple of weeks ago-I noticed an inicident several hours old listed as one alarm but with 20+units assighned. Someone later e-mailed me that it was a 2 or 3 alarm.

The more I think about this something is not right. If it were a true 3 alarm high-rise there would be about 50 - 60 units on scene.

Ed,
I checked with one of my HFD contacts and it was a 3-11. 29 units is a reasonalble amount of equipment for a 3rd. I'll send more details tomorrow; been having some trouble getting my posts to post today and tonight.

I live two blocks away from the location of the fire. The sirens from the second alarm companies woke me up, and I was on my way there when they transmitted the 3-11. I suspect the 3-11 was just for manpower, or possibly as a precaution, because by the time I arrived (~7:30), the fire was knocked down. I suppose it can get pretty tiring running up to the eighth floor of a building.

I didn't count the units, but there was a bunch of equipment, though really only about half of it was engines and ladders. The rest were district chiefs, safety officers, medical personnel, and other support crews. They did bring out the mobile command post, which kind of surprised me. By the time they arrived, the fire was well under control.

All in all, an exciting start to my Saturday.

They still do voice checks when the MDT'S go down or when the DPS links do not work for the MDT. Sometimes the dispatcher's links still work and running a person by voice is not uncommon. They also do it when they are in a residence, building where the MDT is not available. That is mostly done on a back channel or the detective mic.

As far as phone extensions, they still use 4287 for municipal warrant code.

That was great heads up for the officer.

I also checked about 7:30AM and saw it listed as a 3-11. I continued to check every 15 minutes or so. It was still listed as a 3-11 at 8:07AM and I think it was "downgraded" to alarm level 1 between 8:30 and 9:00AM. I'm guessing maybe it was downgraded when tapped out but that is only a guess since I'm a little outside of radio range. I don't know if the "downgrade" would be intentional, accidental, or an artifact. Seems like a couple of weeks ago I saw an incident several hours old listed as a one alarm but with 20+ units assigned. A friend later e-mailed that it had been 2 or 3 alarms.
Sorry this doesn't help much with figuring out the IPN glitch.
Happy scanning.

2112. Re: 3-11 HIgh Rise Fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-09 20:12:00 UTC
From: jgohio
Topic: 2097 Message: 2112

I checked HFD AI minutes after Dan posted his 3-11 message, ie. about 7:30AM also and continued to check AI every 15 minutes or so for the next several hours (being a little out of radio range). As Ed said, the incident was listed as a 3-11 by 7:30AM and through at least 8:06AM. Sometime around 8:30,mb between 8:30 and 9:00AM it reverted to Alarm Level 1. Having some familiarity with the time parameters of such incidents, my guess is it was "down graded" to 1 when tapped out ("signal 7-1"). Of course, I wasn't able to monitor so that's a guess. I don't know if that was planned, intended, an artifact, or accident. Worth noting though since if you log on to AI and see a one alarm incident with many units, that might be the explanation. (As a matter fact, seems like a couple of weeks ago I did see such an hours old incident, listed as one alarm with 20+ units and a friend e-mailed me later that it was 2 or 3 alarms.)
Sorry this doesn't help much with the IPN glitch.
Happy scanning.

the HFD AI page always showed the alarm level as "1" for some
reason. I guess the routine that picks incidents off the AI page
uses the alarm level to classify the incident.

2113. Re: 3-11 HIgh Rise Fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-10 03:18:58 UTC
From: jgohio
Topic: 2097 Message: 2113

Ed,
Checked with one of my HFD contacts and determined it was a 3-11. High rise 3rd isn't quite as much equipmwnt as you would think. The response goes something like this:
First alarm: 5 engines, 3 ladders, 3 District chiefs, 2 safety officers, possibly a rescue+Medical response of 2 supervisors, 1 Medic, 1 BLS. A squad or 2 might jump on it if they were available and heard it.
Second alarm: 4 engines, 1 ladder, 2 towers, 2 Districts, Shift Commander,Cascade (fills air mask bottles), rehab unit, probably the other rescue. +possible additional medical units.
Third alarm: 4 engines, 1 ladder, 1 District
That adds up to 33 not counting the medical units which were listed on AI seperately-either 7 or 9 were shown responding, I think 9. AI showed 29 fire units responding. I could have been off by a unit here or there, maybe only one rescue or one tower etc. I'm not sure all the units always get on AI.
I gather from his posting this AM that Dan was listening so maybe he can further enlighten us. Thanks for your observations on the subject.

--- In HoustonScan@y..., "Edward Lentz" <eclentz@e...> wrote:
> The more I think about this something is not right. If it were a true 3

In response to Rusty Caufield's message:
It is my understanding that it is SOP to pull a second alarm on any working fire in a high rise. Loosely speaking a working fire is a call that involves an actual fire with some significant threat to life or property and where hose lines need to be deployed. High rise fires involve intensive neeeds for manpower. Equipment including air bottles (size of a scuba tank) often need to be carried up stairs and there is often a large area that needs to be searched for victims. For example, yesterday's fire was on the 8th floor of a 12 story building. The 8th floor and all floors above it should have been (and I assume were) searched for victims and posssible fire extension as quickly as possible. Vincent Dunn, one of the leading experts on high rise fires, says even a routine working highrise fire (ie one room and contents) requires at least 50-60 personnel. The 1st alarm on yesterday's fire would have brought about 40 firefighters, the second about 30, not counting EMS personnel who were thankfully apparently mostly in the standby mode.
Thanks for the comments. Rusty, I look forward to what your friend from E 2 has to say.

Joe Gay

Tonight on CBS there will be a documentary related to the World Trade Center attack. Shows 9:00PM EST so it will probably be on at 8:00PM in Housotn. It was shot by professional film makers who happened to be working on a show about FDNY on that day. Much of the footage was apparently shot in the FD command post in the lobby of the first building hit. It is suppose to be very graphic (although not bloody) and very intense but also gives a very close and accurate picture of what the fire department was doing during the attack. I'm posting this message because I'm not sure how well publicized or advertized the show is. It has gotten a lot of publicity in fire department circles. For example, the Columbus, Ohio FD sent out an offical department bulletin about it.
Hope some you folks can watch it.
Definitely someone elses turn to post now.

Hey,
Does anybody on the list cruise around Houston listening to scanners, and then shots video or photos of scenes? And sells it to TV stations and newspapers?

I started doing that a few weeks ago and was wondering if anybody else was doing that.

Thanks,
Marvin

Don't know everything about trunked system so I thought I would throw this out to the trunk masters.

The Pasadena Local trunk system has most of their repeaters keyed up constantly but is not in failsoft mode.
If you were using a trunk tracking scanner, you would not notice anything different.

Question: Could this be some attempt to thwart monitoring on conventional scanners or could this indicate a problem with the system?

BTW, this is only happening on the local system, not the wide.

Nextel interference. They are getting hammered by nextel.

They would not cutdown their capacity to try and thwart scanner listeners.
Their system has some serious issues.

2128. Transtar

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-13 21:09:26 UTC
From: Christopher Hysinger
Topic: 2077 Message: 2128

For what it's worth:

Metro PD has been using the Houston Transtar channel (TG 15376) on the Harris County system for the traffic control operation around Herman park. They have a command post setup somewhere (I think near McGregor and Alameda) and have established dedicated lanes for Ambulances entering the med center. They are providing escorts for the Ambulances through the gridlock conditions. I also heard HPD units on Ch 8 when I was driving around over there and some chit-chat on the Metro PD Tac channels.

I assume the reason most of you are on this list is because you are all interested in what is going on in the Houston/Galveston areas and enjoy listening to your scanners.
Wouldn't it be neat if you could find out what was going on across the entire Harris and surrounding county area simply by carrying an alphanumeric pager, your internet capable cell phone, or (other portable internet capable device) without even having a radio with you?
Wouldn't it be even better to be able to tailor the pages so you only get the type of calls you want to hear and for certain areas they occur in?
And wouldn't it be even better to get this for free except for your normal charges for your pager/cell phone?

It exists...it's called The Incident Page Network, or IPN.
You can simply be a paying member to be able to receive pages OR by being a volunteer dispatcher, get the service for free.
AND, if you either pay to have premium membership or have a nice number of dispatches in a week, you have the opportunity to be able to receive pages from other areas across the country that are part of the IPN network.
It was kind of neat to be able to receive pages from New York back in September to see updates as to what was going on.
I like being able to see what is going on in the Fort Worth area where my folks are.

If you don't have a pager or phone that can receive the pages, you can simply have the pages sent to your email box.
The pages are sent real-time, within seconds of being dispatched.
The network is even set up so that if you are away from your computer and hear something worth dispatching, you can call a toll-free number and report the incident that will be received by a fellow dispatcher who will dispatch the page for you and give you credit for the page as well.

In Houston, we have the added bonus that the IPN system is tied into the active incidents CAD system so that all fire pages and medical calls are automatically sent over the system so you don't have to rely on someone listening to the scanner 24/7 and dispatching all the calls.

You can set up your account so that you only get certain pages. If you don't want reports of every major accident in Houston, you don't have to.
If you don't want reports of every 1 Alarm fire pages from the Houston CAD system, you don't have to. Every fire call, whether verified or not, is given a 1st alarm status so there are MANY called in Houston. I suggest you sign up for 1-alarm non-CAD pages so that you know an IPN dispatcher actually sent out the page. Part of the operating procedures for the IPN system is that we only page for verified calls.
We normally type up the call in the online form and wait to hear if the call is good (units on scene with smoke or fire visible) and then hit the

dispatch button.
That ensures the integrity and validity of the pages. When I get a page, I expect it to be a bonified page, not a "maybe" call.

Anyway, I'm not paid to make this sell, I just figured this might appeal to some of you and if only a few of you take me up on this offer and become dispatchers, it will improve our service. It's hard to find time to sit by the computer and listen to the scanner for any amount of time. With more dispatchers, we better the odds of having someone available listening to many different agencies in different parts of town. I believe some media type subscribe to this service so they aren't strapped to a scanner all day to find out what's going on.

For more information and to see a sample of what is sent out (the ticker), check out http://www.incidentpage.com and the FAQ at http://www.incidentpage.net/main.faq.html

These are the designated alternate talkgroups assigned by the Department(s) for their particular districts. These are usually located next to the patrol talkgroups. See Myles' list for the designators.

This is true for Constables, Sheriff, and other departments.

Please note, the TAC 1-x talkgroups are countywide, all law enforcement agencies (should) have them for inter-agency operations. The North, East, etc., are unique for the different departments.

Hope this helps...

2137. Re: [HoustonScan] What is meant by "Go West"?

Yahoo group: HoustonScan (1999 — 2002)

From: Myles Barkman (home)
Topic: 2133 Message: 2137

Sometimes I'm not even sure what they mean but you can usually figure it out by what talkgroup they are saying it on.

There are at least 5 area TAC channels:
North-A 14768
East-A 14800
South-A 14832
West-A 14864
and now Southwest-A 19152

Harris County Constables Pct.4 also has an East Channel 11440 for units east of I-45 and a West Channel 9808 for units west of I-45.

So if you are listening to Pct.4 and they say "go East" or "go West", you can bet they are talking about their own talkgroups for Pct.4.

Anywhere else, they are talking about the "-A" talkgroups and you will many times hear them use the "-A" designation as well.
What the "-A" is for I haven't a clue. There isn't a "-B".

Usually, units will have each other move to the area tac channel that they belong to but there is no rule to this.
They are available to everyone so you might hear North Harris County units on the South-A talkgroup.

2138. New Findings Galveston and Harris County

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-18 05:18:48 UTC
From: Joshua Carroll
Topic: 2138 Message: 2138

Got a better antenna (muhaha) and can scan Galveston county from the comfort

of my apartment now...so I'll be showing my findings more often.

I also searched the Harris County Alvin Site.

Harris County:

19440 "Metro Dispatch".. this could be the Metro you were looking for
Myles.
I heard a woman (who later IDed herself as Pam) asking people
what
vehicle number they were driving. They said "10-4" alot
(instead of
"clear" or "recieved") and repeated stuff twice i.e. "Okay
Mark on unit
409, Mark on unit 409 10-4 10-4" Very "laid-back" chatter.

17552 Listed as Tx-Dot, wondering about a repair on I-10 East bound
between
TC Jester and Shepard, a "10-45 in the right lane". Also
"cameras out"

19344 Sounded like a BS channel, "Old Spanish Trail" mentioned.
probably the Astrodome.

Galveston County:

59376 Heard a "loud noise" complaint from an address in Bayou Vista.
(I just love those mapping tools on the internet)
Might be Bayou Vista PD

51440 A talk/BS channel.

55664 city workers?

I get Galveston on my Pro-93 sitting in a car around redbluff and genoa red bluff. I was listening to a fire they had and were panicked about finding everyone but later confirmed everyone was out.

At home I have a pcr-1000. Anyone use the FSK circuit with the dicriminator? Does it actually show channel descriptions!? I saw a screen shot with the trunker and seemed pretty informative. I was guessing though that the TG were displayed with user own generated descriptors. I dont see how or why they would want to send descriptors (if even possible) everytime they xmit.

2143. DTMF, CTCSS Decoder.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-20 17:50:54 UTC
From: Thomas E. Ketchum
Topic: 2143 Message: 2143

I know this is off topic somewhat, but I am hoping that someone here may be able to help. Please reply to me off list, as I am sure not everyone here wants to read about it.

I am looking to find a unit that will decode DTMF, CTCSS and DPL, and display the data on a LCD display. This unit should have a speaker input and or a line input. It would also be nice if the unit was not too large as to be portable. If the unit has a RS-232 port for connecting to a computer, that would be great. I have searched, but have not been able to find a decoder that will do DTMF and CTCSS, I have located one or the other, but not both in one unit. Does this item exist? I would like for it to have a fairly fast scan rate, so that it can grab the data before the transmission has ended. It does not need to display DTMF and CTCSS at the same time, just have the provision for decoding both signals.

Thanks for all your help in advance.

Thomas

All Scanner Members
I am working with FEMA and the State of Texas on a mutual aid plan for disasters. One item that we are looking at is radio frequencies for emergency agencies. Does anyone know how to find a frequency list from the FCC that would list everyone who is on the emergency and public safety frequencies? I saw it years ago and can not find it when I need it.

2149. Metro Buses on Star-Net

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-22 19:13:00 UTC
From: kg5ai
Topic: 2149 Message: 2149

Hearing a lot more Metro Bus traffic on the Harris County STAR-Net system.
Talkgroups in the 19344-19536 range heard so far.
Does anyone know if there will be a total migration of Metro bus operations from the 800 LTR system? What will become of the LTR system? Could it become part of the STAR-Net system?
Let's see what happens...

From: hfdcfa
Topic: 2150 Message: 2150

I saw a message posted about the fire buffs. I do not know much about them, but I do have some info that might be of interest. Every Feb. and September the Houston Fire Department host a series of classes called the Citizens' Fire Academy. The class runs once a week for 12 weeks. It gives you a basic understanding the department as well as the ability to do ride alongs. Once you finish the class you have the option to become alumni and volunteer in different areas of the department. If you would like more information you can e-mail me at hfdcfa@ev1..net or cfa3@... and I will put you in contact with the programs cordinator. As a gradute of the class I promise it is an awsome experience and a chance to give some back to those who protect and serve.

2151. Harris Cnty Emergency Corps

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-23 05:41:00 UTC
From: d1033
Topic: 2151 Message: 2151

Back during the first half of the previous century {early 1950's} near the corner of Pecore/No. Main was an Emergency group w/ several large vehicles for transport and some I believe were emergency lighting units. They were painted blue/white, had the large Civil Defence logo on the doors w/all the red lights and chrome sirens mounted on the front fender/bumper. I used to walk by there twice a day on my way to school {Hogg Jr High}. There name was Harris Cnty Emergency Corps.

Are they still operating in Houston these days? Any info would be appreciated. Also a link to there business if known. And if anyone has photos to view that would be just super.

Thank You

HCEC "The Corps" unfortunately went under several years ago. The Emergency Services District (HCESD#1) for there former territory is providing the EMS service them selves now. They are still dispatched on 155.160 (pl 192.8). You can check out http://www.hcec911.com to look at what the dispatch center has become. You can also call the dispatch office mon-fri in the afternoons and ask for Glenn, He can provide you with some recent history and maybe some contacts for the old Corp members.

- Rusty
(Former HCEC Dispatcher and EMT)

Topic: 2143 Message: 2153

I'll offer an opinion and hope others will provide some feedback. I think your best bet would be to get the Police Call CD ROM. It lists freqs by State and by Service, ie Fire, Law Enforcement etc. Very close to what you need. If you can "export" data from the CD into your data base you're in luck, although I don't know that you can do that. Of course, you would have to go through city by city to pick up the data, but I doubt that there is an easier way from any source. I have looked at several FCC data base sites and all were user unfriendly for the kind of thing you're looking for-on most you had to check freqs 1 by 1. I made some additional comments and gave some sites in response to a similar question in Messsage 2068 on 3-3-02.
The Police Call Site is
http://www.scannermaster.com/products/software/policecall/screenshots.php
(the last part of that url is .php)
Good luck. I hope some others have comments.

> I know this is off topic somewhat, but I am hoping that someone here may be able to help. Please reply to me off list, as I am sure not everyone here wants to read about it. I am looking to find a unit that will decode DTMF, CTCSS and DPL, and display the data on a LCD display. This unit should have a speaker input and or a line input. It would also be nice if the unit was not too large as to be

portable. If the unit has a RS-232 port for connecting to a computer, that would be great. I have searched, but have not been able to find a decoder that will do DTMF and CTCSS, I have located one or the other, but not both in one unit. Does this item exist? I would like for it to have a fairly fast scan rate, so that it can grab the data before the transmission has ended. It does not need to display DTMF and CTCSS at the same time, just have the provision for decoding both signals. Thanks for all your help in advance. Thomas

the police call disc is so far out of date that you are better off getting
them from another source. nor do they have everyone listed in the disc so
they paticular city you are looking for may not even be on this list.

d1033,
Confirming there is a Fire Buffs Club in Houston. Meeting are the third Monday of the month at 6:30PM in Bellaire. I have forgotten the exactlocation. Visitors are welcome. Besides buffing (and scanning), a number of the members are intested in restoring antique fire apparatus and the Buff's Club overlaps with the local chapter of SPAAMFAA (Society for the Preservation and Appreciation of Antique Motor Fire Appaaratus in America). Good bunch of people. I e-mailed you a contact person direct. If anyone else is interested, let me know and I'll provide yuo with a local contact.

The fireboats are operated by the Port of Houston Authority (PHA). PHA (as you might guess) is the entity that operates the Port of Houston. There are three fireboats. One is stationed just East of I610, the second around the mouth of the San Jacinto River (across the channel from the Battleship Texas), the third is on at the upper end of Galveston Bay, on the West Side, I can't remember the name of the facility, it might be called Bayport.
Does Springtime bring out the fireboat fans? We had an extended discussion of fireboats when I first joined the Site last Spring. The first posting was #1172 on May20,2001. If you look on the bottom of the opening page of this site and click on the May'01 box on the calender, you'll get a message index and can find the numerous fireboat posts. The thread appearing with the first post does not include all of the messages, I think the discussion went on into June. Many of the questions you asked were answered during that exchange.
Good luck with your search.

The fire boats were operated by the Houston FD prior to about 1970. The station was # 21. They had an old boat that was named the Captain Crotty. It was built in the 1950's. It was a copy of two that were built for the Baltimore FD at the same time. Before that they had an real old boat that I think was orginally steam powered. The Houston FD did have a small fire boat, I do not remeber the name. It operated about the late 1960's until about the late1970's. It was on Lake Houston, Channel, and was last seen on the beach at Lake Conroe. The city of Galveston also had a fire boat and it went away aroung the 1960's.
The Sabine Neches Chiefs Assoc. which is the Beaumont, Orange, and Port Arthur plants and FD's, had a fire boat made on a surplus landing boat. It was in service from about the 1970's until just a few years ago.
There is a smaller fire boat that the Sea Brook VFD operates on Clear Lake. It is about 25 feet.
Corpus Christi has a fire barge, that needs a tug boat to move it. It is about 80 feet long and can pump approx. 15,000 gpm. It has (2) 5,000 gpm monitors and (1) 85 feet Swing boom with a 5,000 gpm nozzle on it.

These as far as I know are the only fire boats ever in services in Texas waters.

Heard similar activity on other frequencies in the 459 MHz band yesterday.
I believe I've determined this to be incidental radiation from other people's car stereos. Kind of strange, heh?-Being able to find out what stations other people driving next to you are listening to.

Guess it could be a whole new part of the scanning hobby-listening to what other people are listening to. Only works well if you are going the same direction and the same speed and within about 30 feet.
Are you up to the challenge? Just rememeber, I didn't tell you to tailgate!

Gotta get back to work...

From listening this morning, all these talkgroups appear to be
Metrolift operations.
The 800 LTR on the .3875 and .9125 freqs are still operating (I
assume all other regular bus ops).
Metro is also using lots of private calling on the system.
Wonder what effect this is having on overall capacity of the system.
They are quite busy during rush hours.

2167. Clear Lake High School

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-27 01:41:52 UTC
From: Joshua Carroll
Topic: 2167 Message: 2167

Most Clear Creek School (or when I went to Clear Lake High School) used
Galveston county cops to patrol. They also have their own "in-house"
security.
Would they be on the Galveston County group or would they have their own
simplex
frequency, or both? My brother goes to that school and I'd like to know
when, if anything, goes down.. you know, with all this 9-11/Anthrax crap
going on.

Thanks for any input,
Josh

Huh? Clear Lake HS is in Harris county. I rgaduated
from there back in 95 and only cops I remember is HPD.
Clear Creek is in Galveston county though.

2170. Looking for smt LED's in Houston

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-27 05:36:46 UTC
From: sly.debbie@verizon.net
Topic: 2170 Message: 2170

Sorry to be off topic. I'll keep it short.
I'm working on the backlighting one of my radios and looking for some surface mount LED's. Not really familiar with all the various electronic parts houses here in Houston that carry a good supply of smd's so I need some references on where to go. Just the stores that'll sell to individuals and don't force you to buy the whole roll as I only need a few. The only store I'm familiar with is Ace Electronics on Antoine that carry smd's. I'm sure there are others but not familiar with them.
Feel free to e-mail me privately as not to plug up the list with off topic subjects.
Thanks
sly n5gqb

I discovered these at the Champions Tournament recently. The PGA frequencies should be active. The golf course should have communicaions in the 452-453/460-465 MHz range. Also check the 151-160 MHz business/local government frequencies as well as the TAC talkgroups on the Montgomery County Trunked system and the ITAC channels, most likely 868.0125 MHz.

Happy (golf) Scanning

As luck would have it, work caused me to be in the Champions area for a short while today. With my handy Pro-92 and Scout, I captured the following:

Champions Golf Course 464.9875 D 165
Much talk about trimming tree branches for ABC

PGA 461.5875 PL 151.4
461.4375 PL unk

ABC? 455.4625 Pilot Tone?

Captures by Scout
464.8750
464.9125
464.9500
464.9625
469.4125
469.4375
469.4500
469.4625
469.4750

Happy Scanning

2183. Re: [HoustonScan] Re: Shell Houston Open

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-31 07:41:43 UTC
From: Myles Barkman (secondary)
Topic: 2177 Message: 2183

Was up in Montgomery County Friday and Saturday. Didn't have any freqs with me to try and confirm for the Shell Open.
Here's some UHF freqs for Brown and Root or Shell possibly used in the Cypress area of Harris County:
464.975
464.7125
464.7375
464.7625
464.6375
These can be used in repeater and direct mode.
I can tell you that I heard a repeater on 462.700 MHz with 156.7 Hz PL tone used for some coordination for the Golf Tournament.
Didn't really have time to figure out who all this was but it may have been some hospitality thing.
Heard several media freqs used in the 450 and 455 MHz range.
Here's some freqs used by the Woodlands Conference Center (I don't know if they would have anything to do with the Shell Open but check it out):
463.675 repeater Ch.1 Golf
451.825 repeater Ch.2 Conference/Service
451.900 repeater Ch.3 Banquet
464.525 repeater Ch.4 Security/Engineering
468.375 simplex Ch.5 Guests
463.375 simplex Ch.6 Guests
463.675 Ch.7 (Ch.1 direct)
451.825 Ch.8 (Ch.2 direct)
451.900 Ch.9 (Ch.3 direct)
464.525 Ch.10 (Ch.4 direct)
851.7125 repeater
452.150 repeater

Also, try this for Woodland Conference Center Golf Supervisor:
Ch. Use
1 467.8625
2 463.675 repeater
3 463.675 direct
4 464.525 repeater
5 458.1125 simplex
6 467.8375 simplex
7 467.8875 simplex
8 467.9125 simplex
9 467.7875 simplex
10 466.2375 simplex
11 461.2375 simplex
12 464.550 simplex
13 469.9625 simplex

14 467.775 simplex

For the City of the Woodlands, try 154.965 and 155.040 MHz repeaters which may be Fire Department
The Woodlands Golf Course is licensed for 457.525, 457.550, 457.575, and 457.600 MHz simplex
Also try these various freqs:
461.2375
466.2375
462.1125
936.6625
452.050 repeater
463.300

Also, if you can stand it, you can get your fill of FRS too.
Check all the standard VHF and UHF itinerant channels of course.

Subject: [HoustonScan] Re: Shell Houston Open

I discovered these at the Champions Tournament recently. The PGA frequencies should be active. The golf course should have communicaions in the 452-453/460-465 MHz range. Also check the 151-160 MHz business/local government frequencies as well as the TAC talkgroups on the Montgomery County Trunked system and the ITAC channels, most likely 868.0125 MHz.

Happy (golf) Scanning

Subject: Champions Tournament

As luck would have it, work caused me to be in the Champions area for a short while today. With my handy Pro-92 and Scout, I captured the following:

Champions Golf Course 464.9875 D 165
Much talk about trimming tree branches for ABC

PGA 461.5875 PL 151.4
461.4375 PL unk

ABC? 455.4625 Pilot Tone?

Captures by Scout
464.8750
464.9125
464.9500
464.9625
469.4125
469.4375
469.4500
469.4625
469.4750

Happy Scanning

2184. Baytown talkgroups heard on Alvin Site

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-03-31 16:58:53 UTC
From: Joshua Carroll
Topic: 2184 Message: 2184

Last night during the severe storms (and again this morning), I am hearing the talkgroups that were only on the Baytown site on the Alvin Site, (Baytown PD 1, Chambers County Sheriff, Pct 2 Dispatch)...

Is this going to stay this way or are they going to eventually swith it back to the way it was? Did they do this because of the severe weather?

Was told once by a radio tech that as long as one unit was on a certain talkgroup that that tower would broadcast that talkgroup. When the unit leaves the area then you will no longer hear that talkgroup. Part of the way a zone system works.

I've heard them on the Alvin tower off and on over the years. Also on the Huffman tower site.

2187. Cool BC780 mod!

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-01 21:22:00 UTC
From: Myles Barkman (work)
Topic: 2187 Message: 2187

Was up late last night and figured out a cool mod for the Bearcat 780.
Looking inside the unit, it appeared to have all the workings of a GPS unit but it wasn't activated.
I found a green wire and clipped it, and this is what it can do now:
The scanner can now tell where you are and automatically scan all the trunked public safety systems in a 10-mile radius of your location as well as conventional public safety frequencies!
As an extra unexpected bonus, it automatically can pull the data from the trunk site computers and displays the true alphanumeric tags as they are displayed on the radios used by the Sheriff's Department and other users.
I was thinking that this was the coolest thing ever but that with all this new stuff, 500 channels would not be enough for everything I could hear now.
Not a problem. I solved this by taking the CPU out of the scanner and turning it around 180 degrees.
This gave me 10 times the number of channels and talkgroup capability.
I would strongly advise NOT to do this mod yourself unless you are familiar with surface mount technology and have the proper equipment and training to deal with small parts.
You will most likely destroy the radio if you try this.

Perhaps the folks at the Harris County Communications Technology Center would be so kind as to offer their services by doing this for people. I'm sure that they want as many people to be able to listen into their system and know what all the talkgroups are. They might even clue you in to future talkgroups and do the mod that will let your scanner monitor digital systems. I haven't figured this one out and probably won't look into it until next year. I have too much to play with as it is now!

If you carefully take the purple/orange wire and connect it to the output side of the green wire then you can receive and display PL/DPL tones.
Wonder why this has not been disclosed sooner.

Now if you look carefully at the schematics, if you jumper the power wire right to pin #9 on the CPU, it will scan at 2x speed. WOW! Of course this is only for the 90 degree CPU rotation. Be very careful that you do not rotate is more than 90 degrees. Sensitivity made be overmodulated and I found that Cell Phone reception is possible. This is an FCC appoved mod registering it with them can place you in the vaction lottery they have running. Coool-O

I also found this while skimming the schematics, you can connect a palm to it via an RS-323 port. This can make various profiles to be downloaded in seconds from your palm. You will need a MAX323 chip along with 10uF Tant caps to make the circuit. A cool custom control panel was listed here http://www.theimageworks.com/toilet/toilet6.htm. Work is currently at rev 6 so it is quite nice. It stand for Total Operation In Listening (to) Emission Transponders.

Good luck and please do not hold me responsible for any work performed by yourself.

Seems to be alot of stuff going on now. Anyone know what all is going on?
Lifeflight getting a kid or two from a Pasadena school.
Report of possible drowning incident?
One of Rural Metro's medics being taken to hospital for syncope (not related).
News helicopters talking about incident at Red Bluff and Beltway (probably drowning).
Lots of black smoke to my northeast. Smells like grass fire.
Woman in Kohl's parking lot with syncope episode.
Nothing on IPN that I could tell.

2195. Tank fire in Deer Park

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-03 23:42:29 UTC
From: Myles Barkman (home)
Topic: 2195 Message: 2195

Smoke to my northeast is coming from some tanker fire at a Deer Park plant.
Didn't think it was a big deal but just heard there is a shelter in place
east of Glenmore in Pasadena, North of Red Bluff into Deer Park.
They are shutting down east bound 225 at the Beltway I believe.

stupid question, have heard the word "syncope" in many calls,

but never knew what it was...

I just figured it was not good since an ambulance needs to be called.

What is it? :)

Nevermind, I love www.dictionary.com (thanks to my sweetie for pointing
that out)..

It's basically a blackout, or, to be official:

A brief loss of consciousness caused by a temporary deficiency
of oxygen in the brain; a swoon. See Synonyms at blackout.

2199. power outage in Pasadena

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-05 01:10:20 UTC
From: Myles Barkman (home)
Topic: 2199 Message: 2199

Don't know just how long this has been going on (less than hour?) but there is a pretty good size power outage in Pasadena apparently north of Pasadena Boulevard.
PD is hitting the major intersections for traffic control and requesting flares from anyone that has them.
Listening to HL&P on trunk system and they are pretty busy on talkgroup 48 trying to switch some power.
Power might have come back up just now.
Guess this could be a good test of the city's back up systems.
The Police Department and their communication tower are in the effected area. All communications seem to be business as usual.
Maybe I should fix some dinner before my power gets knocked out next.
"Reliant", yeah.....right!

2200. Re: Fire Boats

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-05 05:55:10 UTC
From: c_mahlstedt
Topic: 1185 Message: 2200

I worked on the Tellepsen, a 65' fireboat located in Morgan's Point (At Barbours Cut) about 5 year ago. We had 2 boats, the Tellepsen and the Bracewell that were identical. Both were 65' (if memory serves me right, and the Farnsworth which was I think 80'. The Bracewell and Tellepsen each pumped 6000 gpm and the Farnsworth pumped 8000gpm. The Tellepsen is located at Barbours Cut Terminal in Morgan's Point, the Farnsworth is located Near the Beltway 8 toll bridge at Jacinto Port, and the Bracewell is near the 610 bridge. All three stations have a Captain, a Pilot, an Engineer, and a Hoseman. At the Tellepsen,. they also have an Inspector on shift.

Hope this is all still correct and hope it helps,

Chris

Would anyone know of a group where I maight go and ask some Q's re:
the Houston Ship Channel? Examples: is the channel navigable by
small motor vessel or houseboat?

How far down stream?

Locations of Marinas?

Locations of boat launching facilities?

How far into the City {Buffalo Bayou} can one cruize?

Is it possible to navigate all the way to Lk. Houston?

Etc, Etc

From: Champ
Topic: 2204 Message: 2204

That would actually sound quite interesting, if you were able to merge all your scanner audio files into an actuall playlist. Actually, if you were able to do that, and also with the many groups out there, if anyone has any archived audio files of different incidents in there respective area that they might be able to send out to you. Having an online audio feed of different types of calls throughout the states and Canada would sound very interesting. You would wanna try to make sure each file would be a complete file of a call, but nonetheless it would make an interesting feed..

I'm sure there's some files in the group page you could use. I know ppl in this group have different files. Whattya say, do you think this sort of thing might fly.

Randy

Oh, and sorry folks about the crossposting here. I thought this might be of interest to many different regions interested in scanning.

2205. Need Help With Pasadena

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-07 01:20:08 UTC
From: txslady026
Topic: 2205 Message: 2205

I have a scanner that I can program 800 freq. in. It is not a trunking scanner. The scanner hangs up on the pasadena channels like someone has left the mic open. I spoke to a person at radio shack who seemed very knowledgeable about scanners. He suggested I get a trunking scanner. However he explained that they were difficult to operate. I went to another store and the guy told me that Pasadena and Houston has put something in place to stop people from listening. I am not sure which is true but I would like to listen to the Pasadena channels. I am willing to learn the trunking scanners but only if it will work.

Can someone please tell me what the problem is and what I can do to resolve it even if I need to by another scanner.

Not sure why the Pasadena frequencies are hung up like that. It's been that way for a couple of weeks now.
I too thought that it could have been some sad attempt to keep people from listening to them but it is kind of late to try doing that now. For the number of years that Pasadena has been trunked now, if they think that the majority of people who listen to them with conventional scanners and not with trunktrackers, I'd have to say "pass that around, stingy", cuz they must me smokin' something (no, I really don't).

There could be a problem with their controller, who knows. On to your dilemma. If you get a trunk tracking scanner and can figure out how to use it, you can listen to Pasadena, League City, the City of Houston, Harris County, and most other trunked systems around here depending on your location and antenna.
Hopefully, you don't live too close to a Nextel or cell phone tower, either.

2207. La Porte PD TAC channel

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-07 01:36:47 UTC
From: Myles Barkman (home)
Topic: 2207 Message: 2207

Just noticed today that La Porte PD is using 154.340 MHz as a TAC channel.
Is this a new thing or have I just been in the dark all this time?
I'm also trying to figure out Deer Park PDs channels.
Their primary PD is on the 154.7925 MHz repeater.
They have a "Back 1" on 155.0025 MHz and another yet unidentified channel on
155.190 MHz (their old repeater output).
"Back 1" uses a PL of 67.0 Hz now and the other unid channel uses 97.4 Hz.
Anyone else know of "Back channels" that their PD or FD uses?

From: txslady026
Topic: 2205 Message: 2208

I can probably figure out how to work a trunk scanner. But I only want Pasadena, Deer Park and La Porte. Houston takes up way to much time and I could care less about them. Is it possible to only listen to those mentioned above? Is a trunk tracking scanner the same as a trunk scanner that I can program?

I have not paid much attention to any cell towers in the area.

I am currently trying to track a few friends in the Pasadena Dept that can possible explain the problem. In the mean time the scanner I saw was for the 800mhz and scanned the GE, Motorola and LTR systems. Is this good or bad?

2211. severe weather

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-07 04:22:17 UTC
From: Myles Barkman (home)
Topic: 2211 Message: 2211

There just aren't enough lists.
With the severe weather season upon us, I've made a list of frequencies commonly used by amateur radio "storm spotters" used to relay reports of severe weather to the weather service. During severe weather "nets", spotters report severe weather events or damage to the net control operator on the repeater who may then call in the report to the weather service for possible issuing of warnings over the various media outlets.
Listening to these nets can give you a heads up and several minutes of lead time to these warnings.
Spotters are also good for validating the weather service's warnings by reporting damage or hail.

You can see a list of frequencies used by local spotters here:
http://www.clarc.org/~kg5ai/freqs/ham_emergency.html

Severe weather is not the only event these frequencies are used for. Besides the daily chit-chat of hams on these repeaters, you might also hear public service events such as bike races or fun runs. These frequencies are also used for other emergency communications especially when normal means of communications are hampered. Hams might become one of the only links into a community becoming the city's lifeline providing communications between hospitals, police, fire, and the emergency operations center.

Many times, you'll hear media stations say something like "when severe weather strikes, you'll hear it first" but if you listen to these frequencies, you'll hear it pre-first.

If you know of any freqs in your area used for severe weather reporting in the greater Houston area that are not on this list, please let me know.

2213. severe weather outlook

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-07 05:21:42 UTC
From: Myles Barkman (home)
Topic: 2213 Message: 2213

Forgot to mention specifically what we may be in for as far as severe weather goes in the next couple of days.

Looks kind of nasty for people in the College Station-San Antonio-Abilene triangle tomorrow.
For Houston, a squall line might form from the storms coming out of Central Texas Sunday night into Monday morning.
If you plan on watering your lawn tomorrow, you might hold off since you may get more than you bargained for Sunday night anyway. Rainfall amounts up to 4 inches in isolated areas may occur but most folks will get the 1-2 inch variety. In addition to the possibility of some flooding, the squall line may have damaging strait line winds and 'maybe' tornadoes.

Then when you thought it was over, we may be in for another round Monday afternoon when the actual front approaches.

This is the beginning of severe weather season and in the southeast Texas area, tornadoes statistically make their appearance April though the beginning of June. Not surprisingly, this is also the time of year to expect hail and wind damage.

Fortunately for us, the Texas coast gets the fewest reports of tornadoes as compared with other parts of the state. Our specialty is hurricanes!
This is good since most tornadoes that occur in this area form in frog-strangling storms that rain-wrap the tornadoes making them very difficult to see.

This would be a good time to review your severe weather plan-where to hide (central location within sturdy building), flashlights with non-corroded batteries, and your insurance up-to-date.
Note that when you get hail, that you are getting near the updraft center of the storm and the larger the hail you get, the closer/more intense the updraft and the higher your chances of being near a potential tornado.
Remember, though, that tornadoes cannot read and there is no rulebook.
There does not always have to be hail and hail does not always mean there is a tornado.
If you start to hear a loud roaring sound, you are either about to get pounded by large hail, lots of rain, straight line winds, a tornado, or an airplane.

This endeth the severe weather lesson today.
Reliant Energy HL&P has a saying to prevent deaths near power lines that seems appropriate for severe weather-"Look up and live."

Do you know if they will be simulcast on the League City system, like
Pasadena PD is?

I think all of Deer Park is going to Pasadena, including Shell and the
plants/businesses.. but they will be simulcast on the truck and still
keep their analog (?) signal for now.

2217. Re: [HoustonScan] Houston Ship Channel

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-07 19:30:01 UTC
From: Brian Alley
Topic: 2202 Message: 2217

I have been all the way up the channel and into buffalo bayou with a 22' catamaran, lowest water depth I seen was around 3'. But the bayou gets real narrow and the current is strong once you go past Allen's Landing.
I have been to the west side of the I610 loop just in the past few months. Right now the water is probably to low to make it that far.
I do not think you can get to Lake Houston, seems I remember an end over by Sealy, been a long time since I been there.
Brian.

I have to ask if anyone besides the original presenters have tried these MODS on there scanners or know of any one who has done them.

If so could you tell the group if they were successful at this.

It just make sense that if they existed before they would have been published by others. I for one have to be some what skeptical but that is just me. thank you in advance

Have battery UPSs on my computers and a lamp!! :) Also charging my video camera to maybe get some good stuff (although it will be at night)..
It is one of those new Sony Digital 8s, with the Nightvision and Supernight vision (works with zero light, shoots out infrared beams or something... tried it last night in a completely dark room and it was KEWL!) Anyway.. (new toy, other than my scanners), might get some interesting shots.. if so, I'll upload it
(when I figure out how to bring it from the camera to my PC) :)

Watch your butt.. I met face to face with a small tornado during the last storm (no vid though)

Buffalo Bayou does not connect with Lake Houston. Even if you could get to Lake Houston, there is a little problem with Lake Houston dam. You can go up the San Jacinto River as far as lake Houston Dam. You may want to check with the US Coast Guard in Galena Park. It may be that you can not go into the Ship Channel with a small boat at this time.

```
try 155.640 MHz pl 100.0
plus Unicom of local air field
also try the mutual aid "A" fire 154.280
also try the mutual aid "B" fire 154.265
also try the mutual aid "C" fire 154.295

car to car 154.950
Marine ch 16 ( 168.000)
air emergency 121.500 MHz AM
Houston Area Hospital Emergency room net 155.265

Most life flight air craft can use all of the common channels. plus the
Harris Houston area trunking.

Cell phones get iffy 1500 feet above ground, due to cell site size
hope this helps

I assume this 155.400 is simplex since I find no reference to it being a repeater in the license and no additional frequencies for inputs.

Is this still called EMS-2?
Is there a specific use for EMS-3 on 155.385 MHz?

myles (at work)

2243. Deer Park update

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-12 19:56:27 UTC
From: Joshua Carroll
Topic: 2243 Message: 2243

At work a couple of guys who work for Bearcom/Motorola came in.
I asked about Deer Park and they said "Yes, they have been programmed,
they just don't have the radio's yet. They'll probably be in use
in about three weeks". I, of course, asked if they knew the talkgroups,
he said they were pre-programmed and he didn't know what they were yet.

He also coulnt'd confirm to exact location of a new trunk tower (someone
here said 225/Underwood. He didn't work the towers just the radio shop.

But, just to confirm that Deer Park PD/FD will be switching to
the Pasadena system (don't know about city services/schools yet)

Also, where are the towers to the Pasadena system currently?
I know there's one in Downtown Houston, but where is the one in Pasadena
located (intersection).

I sure hope that new tower at 225/Underwood improves the reception into
Webster. Will they be the same frequencies or different?
Will Pasadena be on four systems?
Downtown, Pasadena, League City, and the new Deer Park?
And will Deer Park have League City and/or Downtown as a backup?

So many questions, so little time :)

Three weeks.. (or so)

Sometimes they are on the freqs below...sometimes offset by
10 kHz + or - ....due to cochannel stations within a few hundred
miles (actually its the video offset...but the audio MUST be 4.5MHz
above the video...so it gets offset as well)

I haven't been searching too much on the Pasadena system(s) for new talkgroups lately.
Guess I may have missed out on some preliminary info.
I think there is already a tower near Underwood and 225.
The downtown Pasadena system (Wide) is on top of the Wells Fargo Bank building just like the STAR-Net system.
The Local system is located at the Police Station at 1114 Davis just east of Pasadena Town Square Mall. This is close to Southmore and Strawberry.
I see no pending changes to the Pasadena license to account for the proposed tower location.
I believe the new one is supposed to replace the current local site at City Hall which is at around 200 feet high.
I doubt the ISD buses and maintenance would switch. Too much $$$.

The New site in Pasadena is going to be a replacement for the downtown location. Currently the rent on Wells Fargo (Managed by Pinnacle Towers) is outrageous with a 5% increase in rent per year over the length of the contract. Pasadena will move the channels from downtown to the new tower site sometime over the next year. The city can actually start operating on these channels under a Conditional Temporary Authority (CTA). This allows you to operate while your changes are pending with the FCC after the changes have been approved by the coodinator (APCO).

I'll be curious to see if they leave the MDT system on top of Wells Fargo since there are several agencies in Montgomery County that use Pasadena's data system.

How will that move affect the wide area users? In the past, I have observed several operations on the "special" talkgroups that have ranged into west Houston/Harris County, south Montgomery County, Fort Bend County, etc., using talkgroups assigned to the Downtown Houston tower. Will the Deer Park tower be as tall as the Houston site, or, have enhanced power to cover the area? Or, will the Pasadena site be enhanced to provide coverage? As it stands now, once one goes west of the West Loop, the Pasadena tower fades out and only the Downtown tower can be accessed.

Interesting "communications" heard this morning on 154.950MHz, Intercity Channel 3: DES encryption. I thought that this frequency was to be used "in the clear" since it is an interagency, mutual aid frequency.

Happy Scanning

2250. NWS Net Info RQ & ramblings

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-15 07:10:02 UTC
From: celticstorm333
Topic: 2250 Message: 2250

Was wondering if anyone knew the different frequencies that NWS monitors/broadcasts (not weather radio). Have picked her up on one but believe she monitors multiples.

Also, SHV-NWS operates with certain Parishs/areas calling in on a specific frequency and then a single designated person switches over and reports to the actual NWS on another frequency. Does anyone have details as to the way ours is set up?

I am very interested in weather and weather spotting but don't have a Ham License yet. It really hit home for me when we heard a spotter near Natchitoches, Louisiana call in a funnel cloud and 2-3 minutes later, hear the familar beeps on the Weather Channel for a Tornado Warning!

Anyone know of any jobs for someone who scans as a hobby, loves breaking news/weather, & knows computers?

Thanks again

Not sure if I missed something on the website you suggested or not. I don't have a pager but I do have scanners I carry with me. Didn't see any frequency lists or job listings either.

Don't mean to be rude but....did I miss something? Don't get me wrong, it is something very cool, just don't see what I'm looking for.

Thanks Though

No what he was mentioning is that you can sign up as a dispatcher. They (I believe) may give you a pager or free service if you do some many hours in a week.

Erich

2254. New poll for HoustonScan

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-16 01:10:51 UTC
From: HoustonScan@yahoogroups.com
Topic: 2083 Message: 2254

Enter your vote today! A new poll has been created for the
HoustonScan group:

What city's in the area do you monitor
on a daily basis (or the most)?

o Harris County/HPD - SouthEast/East
o Harris County/HPD - SouthWest/West
o Harris County/HPD - NorthEast/East
o Harris County/HPD - Northwest/West
o Houston - Central/Downtown
o Houston Fire Department/EMS
o LaPorte - Seabrook
o Kemah - Galveston County North
o League City - Dickinson
o Texas City - La Marque - Hitchcock
o Pearland - Alvin - Friendswood
o Deer Park - Pasadena
o SugarLand - Rosenburg - Ft Bend County
o Katy - Western suburbs
o Baytown - Chambers County area
o Tomball - Spring - northern areas
o Montgomery County
o Galveston (island area)
o area not listed here!!

To vote, please visit the following web page:

http://groups.yahoo.com/group/HoustonScan/polls

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

From: kd5lmy
Topic: 2256 Message: 2256

Hi All:
I'm not trying to advertise in this group, but I have written a control program for the Radio Shack Pro-2052. It has an easy interface that resembles the Pro-2052, and allows You to upload and download, and edit all the channels in Your Radio. It also has limited capabilities to upload and download Trunk ID's. All channels can have Alpha Tags. There is also a database for Trunk ID's that You can assign alpha tags to. It also checks the Trunk ID's in the database during a trunk search, and tells You if the ID is in the database or not. There also preprogrammed, and manual searches for frequencies. The interface operates just like the Radio,making it easy to operate, and turn banks off and on. Frequency Banks can also have Alpha Tags for easy reference. As a bonus I live in Houston, and there are sample frequency, and trunk ID databases for the Houston area. The Trunk ID's are taken from the moderators database published at His website. Please give it a try if Your looking for software for the Pro-2052. It's fully functional, and the rgistration is only $14.95 by PayPal. The webpage to download it is:

http://www.qsl.net/kd5lmy/software1.htm

Thanks and Happy Scanning

2258. Weekend events

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-16 12:05:22 UTC
From: Myles Barkman (work)
Topic: 2258 Message: 2258

A couple of events going on this weekend:
International Festival downtown Houston.
Lots of radio traffic in past on Brown and Root 900 MHz trunked system and HPD UHF.

Kappa Beach Party on Galveston Island.
Lots of radio traffic on Galveston County trunked system as well as some VHF and possibly UHF freqs.
Check past posts for the Beach party and find similar usage on freqs used for Mardi Gras.

Anyone catch some interesting comms when the power got cut at IAH today?

Some wild stuff going on at the Pasadena police station now as some ether disposal in the crime lab went bad and got into the vents and spread through the building.
"Unit 1" (is this the chief?) told dispatch to evacuate all non-essential personnel and ventilate the building.
Wonder if they had to evacuate the jail.
There were complaints of head aches and it was affecting dispatch as well.

2261. HAMS: MS150 bike ride help needed

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-16 13:48:55 UTC
From: kf5nd
Topic: 2261 Message: 2261

This is a modified version to the previous MS150 Info-mail message:

MS150
HOUSTON TO AUSTIN BIKE TOUR
APRIL 20TH AND 21ST, 2002

It is only a few days away and the time is moving fast. If you would like to volunteer to work the event using amateur radio, let me know as soon as possible. Normally there is only one amateur radio operators meeting the Monday before the event which is today. This year, not only will there be this meeting at 7:00 p.m. at 8111 North Stadium Drive (just north of the Astrodome between Fannin and Kirby) there will be a second meeting for the operators that could not make to tonight's meeting. The second meeting will be at the same place and it will be on Wednesday, April 17th at 6:30 p.m. The second meeting will allow the operators that missed the first one to come on by pick up their tee-shirt and general event materials. I am having the second meeting also due to things being late on my end and I want to make sure that I get as much information to as many of the operators as possible.

Talk-in to both meetings will be on 146.88, 103.5 tone. If you get lost and did not bring a radio with you (shame on you!), you can call me at 713-826-6917.

I still need many operators for the two days. I will not be able to let everyone know their assignments until the end of the week due to the low amount of operators.

If you know of anyone interested in volunteering, let them know about working the event. Both food and a place to sleep is available at no cost to the operator. If you can forward this message to other groups that would be great.

If you are not able to attend either meeting and you would still like to work the event, give me a call at 713-771-4625 and I will set you up to work the ride.

If you have any questions, please contact me as soon as possible.

Thanks,

Mike Hardwick

The ham radio at the Houston/Galveston NWS can be tuned to any 2m
frequency but usually will be parked on 146.840 MHz to coordinate
with the District 21 RACES Skywarn Net. If there is severe weather
occuring closer to the NWS and not much into Houston, you may hear
them use 146.640 MHz in the Clear Lake area.
NWS has capabilities of talking on the City of Houston trunk system
to talk to their OEM and might be able to talk to Harris County OEM
on the STAR-Net trunk but I'm not sure on that.
They also monitor the PIES frequency on 450.5875 MHz and check into
the nets every Monday morning.
I think they even have a marine VHF radio but I don't know what they
use it for.
That's all they have as far as I know. There are no "back" channels
that are used to report directly to NWS. They use phones for that.
All primary weather spotting by hams is done through the net control
which may or may not be the person at NWS.

2264. Need help with HFD terminology (M.A.S.T.)

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-18 01:50:36 UTC
From: afd4689
Topic: 2264 Message: 2264

Just wondering a few things from my trip out there a few weeks ago.

1. What does M.A.S.T. stand for?
2. What does a M.A.S.T. do?
3. Why aren't the data packets transmitted over a defferent frequency, and what system is in place (auto delay or other method) to ensure the voice messages and the data packets don't "walk on" each other?
4. Where can I find a picture of a M.A.S.T. or even the complete mobile radio setup in the rigs if available?
5. Are there any other departments that you know of that use the M.A.S.T. system?

Any help would be greatly appreciated.
Stay safe,
Dave

It stands for something like Mobile Apparatus Status Terminal. It transmits a signal that indicates the status of the apparatus, for example acknowledging the run, on location, in service on the air, out of service due to mechanical problem etc. I'm not sure how they handle the problem of "walking" on each other. On the apparatus radios they are protected from all the annoying noise you hear on the scanner by "private line" (or whatever the technical term for the system is). I haven't seen a terminal for a while but as I remember they don't have much of a display, just buttons to push to indicate status. A number of fire department use some type of status indicating equipment but I don't know if anyone else uses the same systime as Houston. I knoow that New york City (FDNY) uses a more complicated system that allows the apparatus to signal status but also has a display terminal over which the apparartus can receive alarms.

I don't know if this is entirely correct, Joe. The MAST data is still heard on radios even when
the CTCSS "tone squelch" is enabled. They have to be able to key up the radio repeater, and the
only way to do that is with the correct squelch tone. I suppose if you wanted to get fancy, you
could put the MAST data on a radio using a different tone than the voice traffic, or as was
suggested, using a different frequency altogether.

As far as keeping the MAST data from walking on voice traffic, I think the MAST was intended to
minimize the routine voice traffic for the units in the field, so they would be using the MAST to
indicate the unit's status to the dispatcher rather than voice...

Chris Parris

2267. Re: [HoustonScan] Re: Need help with HFD terminology (M.A.S.T.)

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-18 03:35:44 UTC
From: Rusty Caufield
Topic: 2264 Message: 2267

The MAST Data is transmitted on the Radio's selected channel. So if the unit radio is on A-2 they status on A-2, and so on.
When the MAST sends the Status burst to the Dispatcher it is comprised of the Unit's 4 digit ID and a Status number, The dispatch console system then sends an acknowledgement or "ACK" back to the MAST unit, which is comprised of the Console ID# and the Acknowledge status number. If the MAST does not receive an ACK, it retries or "Resends" for the programmed number of tries. The dispatch system decodes the Unit ID and Status # and displays the text on the Dispatch Screen to the dispatcher and updates the C.A.D.

The system being used I believe is based on the Motorola MDC STS System, and is "Fast Frequency Shift Keying" or "FFSK" or "FSK" at 1200 or 2400 Baud. You can search Big M's website for Status messaging or STS or MDC for more info.

The Mobile radio's used by HFD, the Motorola Spectra is capable of Temporarily Muting or Blocking the FSK audio to the Speaker so the user does not even hear it. This is a setting in the radio's programming.

Hope that Helps

- Rusty

Rusty,
Is the muting of the FSK done independently of the CTCSS function?
Thanks,

Yes, It is independent and specific to the FSK burst. Because the data is transmitted not only it's audio but the CTCSS also so it passes through the repeater.

Subject: [HoustonScan] Re: Need help with HFD terminology (M.A.S.T.)

Rusty,
Is the muting of the FSK done independently of the CTCSS function?
Thanks,
Joe Gay

2270. Ship Channel 21 Gun Salute Today

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-18 14:59:44 UTC
From: hobbiecatt
Topic: 2270 Message: 2270

forwarded to me this a.m.

EHCMA SECURITY ADVISORY

ISSUED: 10:00 p.m. on Wednesday, April 17, 2002

FROM: Federal Bureau of Investigation

CONTACT: J.P. Riordan, WMD/Terrorism Coordinator

PHONE: 713-693-5113

E-MAIL: jpriordan@... <mailto:jpriordan@...>

On Thursday, April 18, 2002, the USS San Jacinto will be making its
way up

the Houston Ship Channel. As it passes the Battleship Texas, the USS
San

Jacinto will fire a 21-gun salute. The Battleship Texas will answer
with another

21-gun salute.

This exchange of naval gunfire is scheduled to occur sometime between
12:00

noon and 3:00 p.m. although this time frame could be adjusted
according to vessel

traffic on the Houston Ship Channel and other unexpected issues.

Please advise your personnel and the public that they should not be
alarmed

if they hear these loud explosions on the Houston Ship Channel during
this time

period.

The USS San Jacinto will be docked in Houston but will not be open for

public view due to security concerns.

For more information, please contact the FBI at 713-693-5000 or the
US Coast

Guard at 713-671-5100.

-END-

2271. Gold Star EMS...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-19 05:23:32 UTC
From: WB3GUB
Topic: 2271 Message: 2271

Could someone supply the new frequency(s) for Gold Star EMS? They have left the business frequency (151.xxx) and I have been told that they are now using "state of the art" radio. They are also hinting of getting three helicopters for Polk County and the surrounding counties.

2272. MS 150

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-20 12:35:29 UTC
From: bpckty1
Topic: 161 Message: 2272

Well, they are off and riding. But, the first crash has been reported at 7:25am. Hope it wasn't serious.

Comms reported, so far,

146.880 Net Control
146.720 Med Net
146.120 Med Net input

Much conversation about the other frequencies and tones:

Moscow
Quebeque
Scooter -- Which seems to be for Bellville

Some race comms were on 145.190, but they may have been used by a couple of break point personnel as their chit-chat channel.

2273. 900 MHz Trunked with Some Bearcats

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-20 13:32:05 UTC
From: Wade
Topic: 2273 Message: 2273

Hi Group.

I hate to come here with a question and no value add but I'm stumped.

I have a BC895XLT and BC235XLT which support the Kellogg Brown and Root frequencies at 938MHz but do not recognize them as valid trunk frequencies. I was an early adopter of these two radios and think the programming did not consider 900MHz as valid in the trunking world when I bought them.

Anyone have thoughts on this.

Thanks.

Wade

Sounds about right, except one turtle went from rest stop 2 to Bellville via Brookshire and I-10.

2278. International Festival/Brown & Root loaners

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-21 12:25:09 UTC
From: Myles Barkman (home)
Topic: 2278 Message: 2278

Got the low down on the talkgroups used for most of the traffic at the International Festival.
These talkgroup designations are probably the same for other special events that use the radios but their usage would be different.

Find details on the 900 MHz Motorola Type II system here:
http://www.clarc.org/~kg5ai/freqs/brown-root.html

The talkgroups most often used and listed on a laminated card included with the loaned radios is:
Talkgroup Channel/Switch Use
1104 1A Command
1552 2A Direct & Assist
4576 3A HIF Staff (Houston International Festival)
4624 4A Volunteers
1120 1B Headquarters
1616 2B Markets
4592 3B Food/Bev/Propane/Electic
4640 4B Entertainment
1136 1C Art Car
1632 2C (not listed)
4608 3C Maintenance
4656 4C Talk Channel

There are other talkgroups I've heard being used but they must have different radios/more channel in their radios. Most of the loaner radios have a 6-channel knob and 3-position switch (for Zones I presume). In most of the loaner radios, channels 5 and 6 are not programmed.

2279. MS150 - sorry, I have to vent

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-21 14:46:17 UTC
From: kf5nd
Topic: 2279 Message: 2279

Some of you on this list are licensed hams.

To those of you hams who listened to MS150 this weekend:

It's nice that you guys had so much spare time to listen to the MS150 activities. Would've been better if you'd volunteered to help, even if for one shift at the Houston command center. That would've taken all of 1/2 a day, and you wouldn't have had to leave town.

We were TWENTY ham operators short. All of the ambulances for didn't have hams on them, only Ambulance One, the supervisor ! It was very, very difficult communicating with all of the mobile resources in order to take care of the ill and injured. Cell phones do not work out in the country when 10,000 bike riders are burning up the cell tower bandwidth.

MS150 keeps getting bigger and bigger each year, now at 10,000 riders; but ham participation keeps getting smaller and smaller. Why is that ?

This is NOT an MS150 problem or a Houston problem, either. Getting hams to come out for public service events is getting harder and harder nationwide. We have 10,000 hams in Houston, and the same 2 or 3 dozen people show up to volunteer for every major event. That is NOT right !

March of Dimes Walkathon at UH has told the hams - "WE DO NOT WANT HAMS." Not enough people volunteer to support the 25,000 walkers. This year they go to commercial VHF-FM radio for the first year ever.

If you aren't a ham, and you aren't involved in Public Service - I suggest that you carefully reflect on why we have an Amateur Radio Service, and what duty you are called to, as a Radio Amateur and an American. Our President has called for all of us to volunteer to support our country; so why are most hams being wallflowers?

My apologies to those of you who aren't hams, or those hams reading this who had pressing personal or family obligations this weekend.

73,
Pete KF5ND

Note: some of us unable to be there this weekend did volunteer.. if you check out the APRS cds' and laptops, used at ride HQ, you will find my fingerprints all over them <smile>

I did what I could.. participation this weekend was out.

Oh, but I did take 7 hours total yesterday and go fix the 443.7 radio at LaGrange. This is the Armadillo Intertie remote/repeater. Our system is available to the ride, and we wanted this repeater to work. It was repaired (K5FOG, KC5SHO, and myself) well before the ride got to LaGrange. Minor PA problem.

Yes, the "Evil Empire" (that is our un-deserved reputation) Armadillo Intertie makes the system availabe for public service, Red Cross, and any disaster/ emergencies.

Sadly, this morning I heard Life Flight dispatched for a motorcycle support rider incident. No word yet as to the severity of it.

From: Joshua Carroll
Topic: 2282 Message: 2282

This is somewhat scanner related:

The 2002 Houston/Galveston Hurricane Workshop will be held at the Pasadena Convention Center, Wednesday, May 8, 2002. This annual event is designed to inform and educate residents of Southeast Texas on the dangers of this powerful storm. The theme of this year's workshop will be "Allison: An Inland Flood Odyssey". It has almost been a year since Allison blew ashore and wreaked havoc across the southern U.S. Particularly hit hard was southeast Texas which included the Houston/Galveston metropolitan area.

With some 20 to 40 inches of rain over a 3 day period, inland flooding became quite a problem for many locations. In fact, the heavy rains led to unprecedented floods across much of the urban Houston landscape. This workshop will focus on the many aspects of this historical and deadly storm. Presentations will cover what went wrong and what went right with pre-storm plans, post-storm analyses along with and a variety of other related topics.

The Hurricane Workshop is a FREE event and is open to the public. From the curious to the concerned, everyone is encouraged to attend.

More information can be found at this link:

http://www.srh.noaa.gov/hgx/tropical/workshop02.htm

..

This will be the 5th one I've attended, so hope to see you there!

..

From what I heard from my Pro-92 in west Houston, the bird was disregarded and the injured rider was taken by ground ambulance to the local hospital.

And, I am not a ham, and since I am on call-out this weekend at work, I had to stay close to home.

Mike wrote

I understand where you coming from but let me play devil's advocate with you for a moment.

Tomorrow, Monday 22APR02 is the day to start planning for the next MS150. Unfortunately many times other commitments have been made prior to the cry going out for help. The sooner you know the sooner to start soliciting help. Second, keep everyone up to date with a monthly reminder & info for the first 6 months, bi-weekly for the next three and weekly for the last three months. This keeps it fresh on everyone's mind.

As one of the tech's for our church, I know about volunteering and scheduling volunteers. It takes one tech for our first (traditional) service and three techs to run sound, lights, PowerPoint & video for our contemporary service. We get there about 7:00 and don't get out until shortly after noon. I already miss 6-8 Sundays/year for my daughter (who is on the US Interscholastic Championship orienteering team) as we have to travel around the country for various competitions. Fortunately our tech team is big enough to handle people out for various work & personal events, but we have to constantly be reminding one another who's covering what assignments on which dates. Which reminds me ... I've got to send an email to everyone reminding them I have to work next Sunday.

As for this year, I didn't get asked until about a month or so ago, six months too late for my calendar. Now, as soon as you have a date for next year, let me know, if at all possible, I will give whomever the better part of a Saturday.

From: Mark W Earle
Topic: 2279 Message: 2289

Yeah, I put my own, WD0ACD, and N5PTN's calls in the filter list.

I would like to hold a small hour or less class next year on how to use
more effectively the APRS software.. time permitting! :)

2290. How about a Palm Scanner

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-23 06:57:32 UTC
From: Champ
Topic: 2290 Message: 2290

http://babbage.mis.coventry.ac.uk/srp/default.html

This would make a very interesting scanner for one. I found this off of rec.radio.scanner

Thougt I'd share this.

Please don't flame me for the crossposting on this one. This looks like it could almost be a scanner of the futre.

I'm not sure, but some Saudi big wigs, including their oil minister, are visiting Bush in Crawford, and there was some speculation that they might meet with oil company execs (per the WSJ). That might meen they are coming to Houston.

Internal sewer backup has caused their computer system to shut down, according to 13 news. No patient care issues, it was limited to a small (but important!) area, aparently.

From: Frank Jacks, Jr
Topic: 2298 Message: 2298

I will be traveling to Houston in June for my work's annual convention (at the Westin Galleria). I'm trying to go ahead and get ready with my scanner now so as not to have to deal with it later when inevitably I won't have the time (pro-93). I will be traveling from Austin via Hwy 71 through Bastrop to I-10 down by Columbus and then over to Houston. I've already gotten my Houston frequencies from Myles' website (this is a fantastic resource, thanks!!!!).
Can anyone help of give me sites to check out for the driving part of my trip and any other help?
Thanks
Frank

2303. International Festival more freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-28 05:51:57 UTC
From: Myles Barkman (home)
Topic: 2303 Message: 2303

Here's a couple more freqs used out at the International Festival just in time for the last day Sunday 4/28.
The HFD bike teams are on 453.425 MHz (A1) and sometimes are heard on simplex (D1).
The HPD command post at the IFest is using 460.425 (Citywide).
Internal comms related to the IFest are mainly on the Brown and Root 900 trunk using loaner radios.
If you go Sunday, come by the Lost Kids booth and tell everyone what a great job they are doing! If you bring a child, put them on a leash-REALLY!

BTW, did the Prince leave town tonight? Someone important must have left town since the I-45 South HOV lane had cops all up and down it including some staged at various intersections.

The Saudi delegation is in town until at least Monday. President Bush was in town briefly last night to attend a wedding in the Tanglewood area. He came up 45 from Ellington around 6:45 and then proceeded outbound on Memorial, and went back the same way at around 8:30 or so. I caught his motorcade just east of Memorial park. Always an impressive sight.

2305. Hurricane Workshop is Wed, May 8th.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-28 17:36:08 UTC
From: Joshua Carroll
Topic: 2305 Message: 2305

...THE HOUSTON/GALVESTON HURRICANE WORKSHOP WILL BE HELD ON MAY 8 STARTING AT 8AM AT THE PASADENA CONVENTION CENTER...

THE THEME OF THIS YEAR'S WORKSHOP IS "ALLISON:INLAND FLOOD ODYSSEY". DURING THE WEEK OF JUNE 5 THROUGH JUNE 10 , TROPICAL STORM ALLISON HIT THE SOUTHEAST TEXAS REGION WITH RECORD BREAKING FLOOD PRODUCING RAINS. ALLISON BECAME THE COSTLIEST AND DEADLIEST TROPICAL STORM EVER TO HIT THE UNITED STATES WITH 22 LIVES LOST AND OVER 5 BILLION DOLLARS DAMAGE DONE IN HARRIS COUNTY ALONE.

THE WORKSHOP WILL USE WHAT HAPPENED DURING ALLISON TO ADDRESS THE PROBLEM OF INLAND FLOODING. MORE PEOPLE HAVE LOST THEIR LIVES DUE TO INLAND FRESH WATER FLOODING THAN ANY OTHER ASPECT OF TROPICAL STORMS DURING THE PAST 30 YEARS. THIS IS A PROBLEM THAT NEEDS ATTENTION. ONE OF THE BIG CONCERNS IS COMMUNICATING THE THREAT TO THE PEOPLE IN DANGER. CECILIA SINCLAIR, CHIEF METEOROLOGIST WITH FOX-26 WILL DISCUSS SOME OF THE PROBLEMS THE LOCAL MEDIA HAD IN HANDLING ALLISON. DR. STEVE LYONS, TROPICAL WEATHER SPECIALIST WITH THE WEATHER CHANNEL, WILL BE ON HAND TO DISCUSS HOW THE WEATHER CHANNEL COVERS LANDFALLING HURRICANES AND TROPICAL STORMS.

THE WORKSHOP IS OPEN TO THE PUBLIC AND NO PRE-REGISTRATION IS REQUIRED. IN ADDITION TO THE MEANINGFUL TALKS THERE WILL ALSO BE PLENTY OF VENDORS AVAILABLE TO EXPLAIN HOW YOU CAN PREPARE YOURSELF AND YOUR PROPERTY FOR THE 2002 HURRICANE SEASON.

ADDITIONAL INFORMATION CAN BE FOUND ON THE HOUSTON/GALVESTON NATIONAL WEATHER SERVICE HOMEPAGE...WWW.SRH.NOAA.GOV/HGX.

2306. Need help Please!

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-04-28 17:55:58 UTC
From: txslady026
Topic: 2306 Message: 2306

I purchased a BC780XLT scanner and the ScanPro software. I have some questions I need help with. I am new to the trunk tracking scanners. I had no problems working the other ones where you just put in the frequency and hit enter, no other information needed.

When I am programming the software has a section for CTCSS/Trunk. Under this category it has what appears to a freguency code followed by a number (ex: 67.01 01) do I need to have this information for each frequency I program? If so, where can I find this information?

On some of the Pasadena channels I am getting tones (sounds like mores code) and on some channels I get a long steady tone. Does anyone know what this is about?

Does anyone have or know where I can find accurate frequencies for the following cities.
Baytown, Deer Park, LaPorte, Pasadena, South Houston, Seabrook, Clear Lake.
I have programmed frequencies for all of these cities but I would like to double check to make sure they are correct and that I have not missed any.

Any help would be greatly appreciated. If you have any information on scanner or software that might be useful please feel free to advise me.

Shannon

I still hear them on 151.925 (PL 123.0), dispatched by
a Gold Star dispatcher from the Polk County Comm.
Center in Livingston. The rest of the company is
dispatched from Port Arthur and Lufkin on UHF freq's.

2310. Pearland Fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-01 10:20:03 UTC
From: bpckty1
Topic: 2310 Message: 2310

Big plant fire, 18400 W Clover, Pearland, FM 2351,Hastings-
Friendswood Road, County Rd 125 area.

Mutual Aid is from several agencies. Unfortunately, I
live too far away to hear Brazoria County talkgroups, as well as
Friendswood, and Brazoria County departments that are still using
VHF.

Pearland Fire Dept is active on the following Harris County
talkgroups, on the Downtown tower:

13936 Pearland Common Emergency
13680 Pearland Fire Department Dispatch

No Police or other talkgroups have been heard, from far west
Houston.

Any talkgroups unique to the Alvin site have not been heard.

Houston Fire Department is part of the Mutual Aid, but I have
not heard them on their frequencies.

Channels 2, 11, and 13 are live from the scene. See Myles' site
for frequencies. Metro Traffic has reporters in the area.

2311. Chemical plant fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-01 12:16:44 UTC
From: Chris Halladay
Topic: 2311 Message: 2311
Attachments: 1 described; 1 payload recovered; 1 useful image is shown below

To all:

There is a chemical plant that is on fire in a town near Houston, Texas. This fire has been burning for several hours. It is currently 4:11am PDT Wednesday.

Is there anyone that can set up a live webcast of this fire? I have heard on Fox News that this town does not have enough equipment to fight a fire of this size and magnitude. They have decided to let it burn itself out. This could take days. The original explosion could be heard for five miles in each direction and the flames can be seen for the same distance.

Here is a story about this fire:

Texas Homes Evacuated as Fire Rages at Chemical Company
Wednesday, May 01, 2002

PEARLAND, Texas - A Houston area chemical packing plant erupted in flames early Wednesday, with authorities evacuating about 100 people from their homes.

Residents near Third Coast Industries were awakened when their windows rattled from several explosions at the plant, which includes a tank farm for storing chemicals.

No injuries were reported. Firefighters were working to contain the blaze.

Authorities said brake fluid and lighter fluid were manufactured at the Brazoria County plant, which included underground storage tanks.

The blasts were heard up to five miles from the plant. One resident told Houston radio station KTRH that thick, acrid smoke was drifting over his house from the plant.

The first alert to authorities came about 1 a.m., said Brazoria County emergency management staffers.

I think that it would be very interesting to monitor the progress of this fire!!

Pearland uses the STAR-Net trunked system for nearly all of their city's ops. Fortunately, they are still simulcasting their primary talkgroups on their old VHF/UHF freqs.

Pearland Fire 453.850 MHz
Pearland EMS 153.860 MHz
Pearland PD 155.970 MHz (only hear dispatcher)
Emergency talkgroup 13936 on trunked system.

Friendswood VFD is involved in this too on 159.225 MHz.
I've heard that possibly Alvin, Fresno, Houston, maybe Webster and others are involved.
This morning, I heard activity on Webster's Fire Ops talkgroup 16976.

Don't have a scanner here at work so don't know what's going on now.

I know when I drove through the city of South Houston this morning, I could smell the stuff with the doors and windows closed.

Heard that they stopped running the night shift a week ago. Probably saved lives. But...could this be the work of a disgruntled night-shift worker?

This warehouse complex is very near Clover Field west of Friendswood. This airport is used by many helicopters around here for refueling (news, Lifeflight) and may actually house these.
I think the planes with the Moody Gardens banners take off from there too.
There was lots of activity at the airport this morning either trying to move aircraft to safer locations and to fly firemen around the scene to see what was going on.

Doesn't sound like a particularly dangerous situation except for the smoke and fumes if they can keep it contained to the complex.
Just one big weenie roast. (blech)

From: Adam
Topic: 2316 Message: 2316

Just a quick question, does anyone have a list of codes and lingo commonly used for HCSO? One I found interesting was "689".....

I hear sometimes "4473, 689"... "4473, go ahead..." and then the deputy proceeds to give an address... what code is 689?

Thanks...

Hello Sandy,

We wish to thank you for your patience regarding the software and cable for the PRO-93 (cat. no. 20-523) and PRO-2053 (cat. no. 20-466) scanners. Currently, the 940-1666 software is still in development. However, RadioShack has learned about a temporary, but immediate, solution to the software and cable for the PRO-93 and PRO-2053 scanners. It is available at <http://www.pro93.com/> http://www.pro93.com/. The vendor at this website has a cable for $15 and supplies download software for the PRO-93 and PRO-2053 scanners!

While this software/cable option provides an immediate solution, it is neither developed nor verified by RadioShack. As a result, RadioShack assumes no liability for its use.

When responding please ensure that the ORIGINAL EMAIL IS INCLUDED, either by using the REPLY option or cutting and pasting it in. Failure to do so, may cause a delay in responding.

Heard this tonight dispatched on HFD.
They sent it out as a "service" call for a house with bees in it.
I really thought about dispatching it out on IPN as a hazmat but I held back. :)

HPD seems busy right now.
Needing canine on west side and fox/canine on central.

Heard Ellington security conducting some type of exercise while I was driving home from work.
For some reason I decided to search the VHF federal band and heard the base on 162.6125 MHz.
I had not heard them use that before although it was in my list as a possible. Now it's a confirmed.
I have several other freqs that are possibles for Air National Guard as well. Need to find out who or what goes on out there.

Thanks

From: Wade
To: houstonscan@yahoogroups.com
Sent: Saturday, April 20, 2002 8:32 AM
Subject: [HoustonScan] 900 MHz Trunked with Some Bearcats

Hi Group.

I hate to come here with a question and no value add but I'm stumped.

I have a BC895XLT and BC235XLT which support the Kellogg Brown and Root frequencies at 938MHz but do not recognize them as valid trunk frequencies. I was an early adopter of these two radios and think the programming did not consider 900MHz as valid in the trunking world when I bought them.

Anyone have thoughts on this.

Thanks.

Wade

Neither one of those scanners support 900 MHz trunking.

Sounds pretty simple to me. Looks like your gonna have to buy a new scanner that'll do 900 trunking. These were the first generation trunk trackers and they simply didn't have 900 or any other band trunking ability other than 800. They could receive in these other bands but not trunk track there.

Africanized bees are considered an emergency. They have killed several people around the country. HFD has actually done training with its firefighters on how to handlel bee emergencies. Now I have to admit, the first time I read a story about a bee rescue in a fire department magazine, I thought "Is this some kind of joke?" Read the article and no its not a joke.
Good scanning. Don't PO the African bees.

Topic: 2273 Message: 2338

The '245 will certainly do 900 Mhz trunking - check the '235's manual.
The 895 probably does not trunk track outside of the 800 band.

Of course, you can always put in a discrimator tap and run trunker
on an old 386 or laptop - not very portable but it works.

Houston Will Be First To Use Handheld Wireless

* *

SCHAUMBURG, Ill. May 9, 2002 -- Motorola and the City of Houston today announced a contract that will make the city the first to use Motorola's Premier Handheld citation application that will enable Houston's police officers to wirelessly retrieve and relay data, and prepare traffic citations on the spot from a single handheld device. Premier Handheld citation is part of Motorola's extensive portfolio of integrated communications and information solutions to address mission-critical safety and security requirements worldwide.

Full article ...

To date, moderating this one guy on this list has prevented eight (8) emails
of the "worm", five of which were sent today.
It's nice to see that I was able to spare the rest of you from this mess
even though I still get the messages.
I just delete them.
Barry, if you're listening, if you don't feel like getting some virus
protection software, just keep your computer off until you do. Otherwise,
I'll find a more permanent solution.
If you're not part of the solution, you're part of the problem. Who knows
how many copies of the virus have already been sent out by one person.
Just fix it.

Well since you asked...

I haven't written a ticket in over a year so I doubt I will even see one of these things. In fact, I don't think these are even being considered for patrol, they will go exclusively to the big ticket writers (although one or two may filter down to each station for divisional traffic units).

About a year or two ago I stumbled across the specs the city was putting out when they were shopping around for these. One of them was that the thing had to run the name and plate you put in (by bouncing it back to the mdt in the car and running it from there, although this appears to have been abandoned) and then give a silent alert (vibrate) if the car was stolen or the person was wanted.

Technology, or lack thereof, certainly isn't slowing down the ticket writing process. All the big ticket writing units in the police dept easily meet their "productivity goals" (don't ever say quotas) every shift. What is really diminishing the number of tickets flying out of our hands is centered way up the chain of command and fancy little palm pilots aren't going to change things.

However, that said, if I can get my hands on one of these things I will certainly report back.

But doesn't this Shell plant seem to catch fire a lot?

Mike wrote

I guess that would depend upon your definition of a lot. When you look at the amount of product that goes through that refinery as compared to others its one of the safer ones. However when you are as big as they are your exposure frequency definitely goes up. I just drove by and it looked like there had been a leak on one of the olefin furnaces. Several 4"-5" monitors on the furnace and columns and not a lot of soot so it probably didn't amount to much until the media got a hold of the story.

From: icom2100@att.net
Topic: 2339 Message: 2363

I watched "The Team" in action yesterday at Harwin and Hillcroft. One officer sits in his shop and watches the light. He then calls color and type of car to other units waiting down the street. Went something like this.

"red 4 door two of two north to west 2-3 seconds" translated it means a red 4 door car turned into the outside lane of a two lane street. The car was northbound on Hillcroft and turned westbound on Harwin and ran the red light 2-3 seconds after it turned red.

How fast were they writing tickets? At least one per light cycle if there was a unit to stop the car.

I was listing to the units on car to car(460.225) that is low power and short range. I found "The Team" after one of the units called for a supervisor to a street address.

How much is the ticket for running a red light?

Has anyone looked at the General Menu lately under "Liberty County"? It appears that Harris County is adding to the monster trunking system with a new site being constructed in Liberty County. Here's the link. Let me know if anyone knows any specifics about this.

That is not exactly what the unit looks like. I go to see the unit today at ITEC. They had a unit there they were playing with. The unit will allow access to TLETS, TCIC/NCIC, and the HPD warrant database, and CAD via CDPD. The tickets will be stored locally on the device until it is docked at the substation for downloading into the court computer system. The units are running on a windows CE platform and can be docket with a mag stripe reader and printer. There are currently 5 units in the field that HPD is beta testing and giving input back to motorola for user friendlyness issues.

You can check these units out at the ITEC show at Reliant Center tommorow.

The future hope migrate there over to a private wireless data systems similar to what the MDTS work on (RD-LAP).

There was a new press release today:

DATE: 5/15/02

HPD Truck Enforcement Unit Adds High Tech Traffic Enforcement Tool To Operations

To: Transtar Updates - Web Subscribers

FROM: Houston TranStar

CONTACT NAME: Artee Jones

CONTACT PHONE: 713-881-3244

REPLY TO: ajones3@...

MEDIA ALERT

For Immediate Release: For More Information Contact:

Wednesday, May 15, 2002 Octevia Evangelista 713-247-2106

THE HOUSTON POLICE DEPARTMENT TRUCK ENFORCEMENT UNIT ADDS NEW HIGH TECH TRAFFIC ENFORCEMENT TOOL TO THEIR OPERATIONS COURTESY OF COUNCIL MEMBER

CARROLL G. ROBINSON

"HPD Truck Enforcement Unit to demonstrate the Interceptor VG-2 Radar Detector Detector

during a news conference at Houston TranStar"

(Houston, Texas) ----- On Thursday, May 16, 2002, the Houston Police Department-Truck Enforcement Unit will conduct a news conference to formally unveil and demonstrate the Houston Police Department's latest traffic enforcement tool designed to make Houston area freeways safer.

The unveiling and demonstration of how the Interceptor VG-2 Radar Detector Detector works will take place at Houston TranStar, the state of the art transportation and emergency management center for the greater Houston region, located at 6922 Old Katy Road starting at 10:00a.m.

Participants in the news conference and demonstration include:

Houston City Council Member Carroll G. Robinson

Houston City Council Member Carol Alvarado

Houston City Council Member Mark Goldberg

Houston Police Department Assistant Chief Frank Yorek

Houston Police Department - Truck Enforcement Unit Lt. Steve Lyons

Houston Police Department - Truck Enforcement Unit Sgt. C.J. Klausner

Houston Safety Council 1st Vice-President - Bryan Corb

For more information on the unveiling and demonstration of the Interceptor VG-2 Radar Detector Detector, please contact Octevia Evangelista at 713-247-2106 or Houston Police Department Truck Enforcement Unit Sgt. C.J. Klausner at 713-376-0877.

I thought that the only trunking towers in Galveston County were
Harris county on an Alvin tower, and Galveston County trunk in Texas
City and on the island itself... there are more? :)

Would be great here in Webster :)

Not forgotten. Just too far away to monitor, although I do have them in a couple of my scanners, just in case I venture near the Beautiful, Brown, Gulf of Mexico/Galveston Bay ;^>

Besides, I was in Sweeney recently, and I could monitor the Clodine site without any problems, but neither my 780 nor my 245 could acquire the Alvin/Dickinson site.

Get your scanners ready for May 21 & 22 (Tuesday & Wednesday).
There is going to be a simulated terrorist threat drill conducted around the
Houston ship channel during regular business hours (#$%@!).
Check out the Harris County trunk, City of Houston trunk, any Port Authority
freqs you know of, amateur radio freqs, etc.
Don't know if the local municipalities will be involved like Pasadena,
Galena Park, Deer Park, La Porte, Baytown, etc.
Might listen in on those too.

2380. STAR-Net sites

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-18 16:34:48 UTC
From: Myles Barkman (home)
Topic: 2380 Message: 2380

Just to avoid some confusion, the southeast site of the STAR-Net system is in Galveston County about 5 miles west of I-45 along FM517. The FCC records show this as being in Dickinson. Many others refer to this as the "Alvin" site. It is actually not in either city but in unincorporated Galveston County right between the two cities.
So whatever you call it, it is the same site.

Here's the proposed freqs for the eight new STAR-Net sites:
Hempstead site-867.6625, 867.900, 868.0875, 868.375, 868.600, 868.750
300 feet on existing tower used by Waller County SO on the west side of Hempstead.

Ames (Liberty County) site-866.050, 866.4875, 866.850, 867.075, 867.450, 867.550, 867.9625, 868.325, 868.925
500 feet on existing tower used by Liberty County SO just south of the city of Ames or about 4 miles southeast of Liberty.

Humble site-866.225, 866.725, 867.2125, 867.425, 867.475, 867.625, 867.7375, 868.150, 868.200, 868.400, 868.625
100 feet on existing tower used by City of Humble near 59 and 184.

Pearland site-866.150, 866.175, 866.300, 866.400, 866.650, 866.700, 867.050, 867.150, 867.200, 867.400, 868.675
175 feet on existing tower used by City of Pearland near 35 and Walnut.

Richmond site-866.200, 867.4375, 867.7875, 868.425, 868.850
450 feet on existing Fort Bend County trunk site off Ransom Road.

Missouri City site-867.675, 868.175, 868.450, 868.7875, 868.875
400 feet on existing Missouri City trunk site near Cartwright and FM 1092.

Brazoria site-866.475, 867.225, 867.725, 867.975, 868.075, 868.475, 868.9625
600 feet on existing commercial (Nextel) tower northwest of Brazoria off Hwy 36.

Angleton site-868.5125, 868.900 (???)
450 feet on the existing Brazoria County trunk site just north of Angleton.

These may not wind up being the actual frequencies used as each site. Some tweaking is expected when interference issues arise.
Many of the frequencies for the sites are the same as ones used in other distant sites (have to reuse).
Some of these sites are on the same tower as existing trunk sites and use the same frequencies which would make you start to believe that STAR-Net is taking them over like they did Chambers County.
The addition of some sites pretty much swallowed up the rest of the available frequencies in the 866-869 MHz public safety band.

You have been assimilated!

So does that mean the new cities covered by these towers (Liberty, MIssouri City,
Angelton) will be rebroadcast on the main downtown site??

That would be great.. would be able to know what's going on over most of the Houston area.

This is a common myth about SmartZone trunk systems.
Many people think that ALL talkgroups on the STAR-Net system can be heard on the downtown site. This is simply not true.
The only time you hear a talkgroup active on a site is when someone tuned to that talkgroup affiliates their radio on that site.

Let's assume we are using auto-affiliate radios in a SmartZone system. If someone tuned to Alvin Public Works talkgroup ventures into Conroe and the radio is programmed with the Tamina site and he switches his radio to the Tamina site (will it do this automatically based on signal?), the Alvin Public Works talkgroup will then be heard on the Tamina site as well. Most of the time, you will not hear many Alvin talkgroups on other sites since the folks don't travel around that much and the site covers their area pretty well. There is no need for their talkgroups to be blindly retransmitted on other sites for no reason.

So the reason you hear so many of the Harris County Sheriff's and Constables channels on almost every site is because the downtown site has the best range of all of them. AND, with so many of them having large areas to cover, many wind up affiliating on the downtown site at one time or another. AND, with so many users of those talkgroups, the odds are great that just one of them would be tuned to the downtown site.
There could even be off duty folks with their radios tuned to their talkgroup where they may live on the other side of the county so it could be why you sometimes may hear Harris County Precinct 5 (Katy area) sometime on the Baytown site.

So the short answer to the original question would be "not likely", unless they happened to stroll into range of the downtown site and either forced their radio to use the downtown site or it switched to it because of a better signal.

Maybe someone could tell us what happens to the remote system users if the remote site totally went down. Would the radios go into failsoft mode or switch to another remote site if it they could hear one? How do the base stations work in this example if they have wireline control into the trunk system?

> The only time you hear a talkgroup active on a site is when someone tuned to that talkgroup affiliates their radio on that
> site.

True....a talkgroup is "brought" to a site as the mobile affiliates
or handshakes with it and that site is the best site the mobile
can find...(interference on channel can cause this NOT to be the
case at times!)....IF there was only ONE mobile on a certain talk
group, that group would ONLY show up on the ONE site the mobile
is affiliated....as it drives out of range of site A and into another
site's coverage, it LEAVES site A (and that talkgroup goes quiet there)
and the new site picks up the traffic....ONLY as long as that mobile
is there...(if the mobile turns its power off, the radio WILL key up
and disconnect the affiliation from that site)..

> Let's assume we are using auto-affiliate radios in a SmartZone system.
They usually are :)

If someone tuned to Alvin Public Works talkgroup
> ventures into Conroe and the radio is programmed with the Tamina site and he switches his radio to the Tamina site (will
> it do this automatically based on signal?), the Alvin Public Works
Yes the radio hunts out programmed sites and control channels and
uses the best RSSI (rcvd signal indicator...a S meter in simple
terms!)...and goes to that site which has the highest RSSI..
a mobile CAN and WILL switch back and forth depending on who is
the best site if it is on fringe of two or more sites..there IS
some programming that requires the RSSI to differ by a set amount
before the mobile hunts for a new site..

> the site covers their area pretty well. There is no need for their talkgroups to be blindly retransmitted on other sites for
> no reason.

A trunking system like SmartNet or more especially SmartZone call
the channels and sites resources....use of these resources is best
done when only the traffic NEEDS to be on that site...if NOONE is
there to use the site, WHY bother?? :) BTW if a mobile is scanning
only the primary channel is affiliated...the other talkgroups it
scans MAY NOT have any traffic on that site UNLESS another user
is affiliated on that TG at that site...(think of affiliation as
the Primary channel of that radio...which ever TG is dialed up

BEFORE the scan is initiated)..

> Maybe someone could tell us what happens to the remote system users if the remote site totally went down. Would the
> radios go into failsoft mode or switch to another remote site if it they could hear one? How do the base stations work in
> this example if they have wireline control into the trunk system?

If a site goes down, the radios may possibly show site trunking OR
the user can FORCE it to scan for another active Zone site...
(it can also be programmed to do it automatically under certain
conditions; time, etc)...each radio has a HOME site (the one they
usually use) and their talk groups is usually homed on that site..
but if the home site goes down, there can be alternates for it to
look for...

A SmartZone fleet map can be complicated..it is like a big matrix with
all the TGs in vertical columns.....each column is under a HOME site

For example,
Entergy's Smart Zone site map shows TG 1 is the Telecom Dept...
The Telecom Dept HOMEs on Conroe or Beaumont....sooo if a mobile
is on TG 1, it would look for those sites control channels first
(the control channels are preprogrammed in a list...which the radio
scans 1st when turned on)....if it doesnt find a control channel
there, it starts scanning all available channels for a control channel
AND the system ID (a hex code assigned to each system)...once found,
it can be updated in a dynamic table (goes away with power cycle)
of nearby sites and control channels (just in case new sites have
come on...that way the radio is not too dumb and locked out of new
sites) The preprogrammed list is STATIC and can only be changed
by reprogramming....

Hopes that helps a little bit...its been 5 years since I worked
on Entergy's SZ system....but I still have all the docs and remember
most of my certification classes :)

If I can scan in Entergy's fleet map (which has slightly changed since
the one I have was published in 96), I will upload it to the
files area or send a copy to those interested ...I have high speed
so large files are no problem)

So far, I've caught activity on talkgroup 8336 on the STAR-Net (Harris County) system. This is Harris County OEM-1.
Also have heard some talk on 146.840 MHz which is the Harris County RACES amateur repeater.
There is talk of rescuing people from the area of the ship channel near Alexander Island, trucks blowing up near plants, and ambulances being stolen. Who knows what's next.
Search around and see if you can find anyone else playing or any more talkgroups/frequencies.

I am listening from Baytown. Not far from the hartman bridge. It sounds like if this was really happening I would already be dead! I am also listening on the Harris county Baytown talkgroups 16912 and 16688 (Baytown EOC) It sounds like they are about to do a rescue with military helicopters. Loading lots of backboards on a bus to make rescues of vehicles and two buses on the hartman bridge. They have been talking about radiation contamination. A gas truck going off the bridge and pnumonia leak. dang how much worst can it get? Sounds like they are drilling all senarios at the same time.

The one drill I was apart of years ago, that is what they did, chuck everything at you at once...Every action caused a negative action, ie "you have a fire at so-in-so. " "responding engine 5." "your engine 5 just hit a school bus in a major intersection causing massive casulties." and so on... As the Boy Scouts say, "be prepared"...

Monitored the HC OEM drills today. A very busy day. Glad that everything that happend was only a drill. A ship on fire, an ammo ship on fire, evacuations and decontaminations, etc. The dispatcher got so involved that after awhile, she forgot to keep reminding all that, "This is only a drill." Since one of the incidents was near the Washburn Tunnel, I halfway expected the Command Post to send someone to the Washburn Tunnel to see if it was under water.

This afternoon, while one of the participants was heading home, he communicated to his base in words that sounded like a child returning from either a toy or candy store: (I paraphrase) "We've got to get a demo copy of the technology we used today. Fantastic, great for knowing where your resources are and how they are being utilized! There are a few bugs that need to be worked out, but overall, it is a fantastic tool."

Sounds like the learning curve is expanding for all. As the participant indicated, they started out just stumbling around, and now, they are becoming a cohesive unit and just cannot wait for tomorrow's trials.

A much better follow-up from what I heard yesterday afternoon. "I have dropped my passengers at the hotel, and am heading to my residence."

Happy Scanning.

Alas, these Baytown talkgroups were not heard from the Downtown Houston site. I guess that SmartZone is really exclusive to its geography. And, I could not hear any of the Amateur frequencies posted for the Baytown EOC. West Harris County is beautiful, but alas, the wide area geography and SmartZone just don't make for complete county monitoring. Ah, the improbable dream, to be able to afford a Handheld with ALL the talkgroups programmed.

Mike wrote

I'm not sure what you mean by the Amateur frequencies posted for Baytown EOC. There are no "official" amateur frequencies for any EOC except maybe Houston/Harris Co. Typically you WILL find Baytown on 146.78 since that repeater is located in Baytown and was purchased with tax-payer money for the hams to use in the event of a Baytown emergency. However, in a drill like the one we just went through where the drill spread over multiple jurisdictions and a much larger territory expect to find operations on a repeater other than 146.78. In this case the 145.29 seemed to be the best machine for the job and we wound up using it the most.

Some questions asked about recreational boating in the Houston Ship Channel back in April were answereed in detail in an article in todays Chronicle. the article "Security Zones Change boating on Galveston Bay" by Shannon Tomkins appeared with the Outdoor news in the Sports section. Bottom line, you can't boat in the ship channel anywhere towards town from about the Battleship Texas. Some other areas around Bayport and Texas City are also closed. Check the article if the details are important to you. I'd also guess that the Coast Guard generates at least a little radio traffic around this issue. Happy scanning and boating.

The guythat is my landlord at the shop was asked to leave twice today while fishing in the area of Texas City. Both times by armed USCG officers. Said if he came back he could face federal prosecution.
He was in his normal fishing spots, which I have been to and cannot see anything that would give reason for rrestricted access.
I had the article laid on my desk later today, after he told me of his experience. Seems we need to be extra careful, the paper was talking about federal charges and 'zero-tolerance' soon.

2400. Hey

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-25 18:29:43 UTC
From: myrickone
Topic: 2400 Message: 2400

Just found your group and am excited about being a part. I have been looking for "others" in the Houston area interested in scanning. I knew there had to be plenty around. Relatively new to the hobby and would appreciate any tips for listening you may have. I am a poor boy so I only use a BC235, but it serves me well enough. Have a great day.

2401. 145.05 Dig/minibbs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-25 20:41:03 UTC
From: Mark W Earle
Topic: 2401 Message: 2401

Just a "FYI"

Besides the 144.39 digi, there is also a high site central digipeater on 145.05

AI5TX-3 to use it as a digipeater

Connect to AI5TX-1 to use the small bulletin board contained in the KPC TNC.

This dig uses a VHF General Electric MVP and 3db antenna, with about 25 watts transmitter power.

Primary use is in support of Red Cross/Galveston for transferring data between shelters, EOC, Red Cross Houston, etc.

But at other times than those uses, feel free to make use of it. It is NOT set up to be an APRS type digi, but more for general digi use.

de Mark

2402. 3-11 fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-25 22:59:58 UTC
From: HouScan@webtv.net
Topic: 2402 Message: 2402

5:50PM-3-11 fire on Boone Rd. near Howlworth. On A-3(453.6750).

Peace~out

2403. Re: 3-11 fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-26 03:32:31 UTC
From: jgohio
Topic: 2402 Message: 2403

Was it a 2-11 or 3-11? The HFD Active Incidents page showed the
alarm level as 2 but the number of units dispatched (32) looked more
like a 3-11.
Thanks,
Joe Gay

2406. Houston fires & Information

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-26 13:46:02 UTC
From: Garry W. Watts
Topic: 2024 Message: 2406

Good Morning to the group from Detroit! Having been to Houston on a few occasions and last year twice for fire buff events, I like to follow HFD fires. The HFD web site is a great source of this info as well as this group posts some stuff as well. Unfortunately the information is limited. I / We here in Detroit run a group called Fire Notification Network of Michigan (FNNM). We have a fire group that we page national fire information to our members. This group gets information from around the country. Texas is a weak link since there are no pager groups to Reciprocate with there.
So, I am constantly looking for Texas information and other area's where there are no networks.
What I'm wondering is? Is there people on this list that would be willing or that could fill in the missing information on major or multi alarm working fires from the Houston area? Like type of structure, size up etc? If so could that be posted here on paged to me?
Also, not trying to spam or advertise here, but I have talked with fire buffs in the Houston area about getting a pager group going, some interest but no one to take on the job! :-). I / We here at FNNM have the ability to support / help someone start something like that there. If there was an interest, please feel free to give me an e-mail at gwatts@... or fnnm400@...
I sure wish they would get live audio going for HFD on the net as well.

Thank you for the time.

Mike wrote

I disagree ... I don't see the ad attacking the hobby radio market at all. I just see the ad as a lame excuse for marketing a product that most savvy communication system operators such as Law Enforcement/Fire/EMS/Federal/State/Local government agencies are pretty much going to ignore anyway. I see the target of the ad directed towards commercial LMR users such as the Petro-Chem industry who contract out much of their communications and some operations manager somewhere sees the ad and thinks they need to go out and spend mega-$ on this product.

2417. Deer Park testing on Pasadena Trunk now...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-05-31 01:50:26 UTC
From: Joshua Carroll
Topic: 2417 Message: 2417

Today, Deer Park started testing it's PD on the Pasadena system..

but guess what..

I wrote it down and left it at work (the one talkgroup I did get for PD)

It was simulcast on it's regular channel, but that's probably going to end soon.

I was working, but scan just Deer Park (and listen to TalkRadio950 KPRC) anyway, whenever the PD went to TAC or the FD, it would not be on the Pasadena system.

I was about to put out a post on this. The talkgroup Deer Park PD Primary is using is 30096 on the Local system.
This is being simulcasted with 154.7925 MHz.

Anyone up in the Tomball area, you might put 158.805 MHz in your scanners. It looks like from the FCC data that they are trying to make a repeater on this freq with the existing fire freq (153.950 MHz) as the input.
I've been told that Tomball public works is using 158.835 MHz. I did not even have this in my list and there is no PL info on it as of yet. If someone could check it out and report back, that would be cool.

Oh yeah. Some time ago, I heard what sounded like some sort of radio net checklist like CIMA goes through everyday on the STAR-Net system. It was talkgroup 18320 and "TMC" (Texas Medical Center) was calling "TRR", "Texas Children's", "Harris County Hospital District", "Baylor" and possibly others for radio checks.
Some sort of Inter-Hospital comm link I guess.
Might be interesting to plug that in and see what sort of stuff goes on on that.
Speak of the devil-it's going on now at 2100 hrs.

From the sound of the Harris County Mosquito Control activity on talkgroup 9072, it sounds like Sheldon(?) between Woodforest and Wallisville Road and West of Sheldon Road must be having some problems tonight. Lots of trucks fogging the neighborhoods in there.

Bet you're thinking it must be a slow night to be listening to these folks. Actually, Precinct 3 Constables had some sort of "escapee" that was retrieved in Highlands a little while ago. Don't know where they escaped from.

2421. [Fwd: Re: [HoustonScan] Deer Park testing on Pasadena Trunk now...]

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-01 00:12:04 UTC
From: Joshua Carroll
Topic: 2421 Message: 2421

The talkgroup Deer Park PD Primary is using is 30096 on the Local system.This is being simulcasted with 154.7925 MHz. Deer Park FD is on 30800

There was a wreck in front of my shop on Center St and Vaughn. So, I figured since it happened in front of a PD unit, I would try and scan and get some talkgroups.

The PD is still using the TAC channels 155.0050 (pl 67.0) and 155.1900 (pl 97.4), but it wasn't on the Pasadena System.

Anyone hear anything on friday evening happening in the La Porte area, about the time of 7:30 to maybe 8:00 pm or so? I was on my way down to the Kemah waterfront for dinner, passed many Seabrook, Kemah, and even two Galveston County cars all going North at an extremely high rate of speed. I seen the frist one around Port Rd, and the others at RedBluff (one Kemah car actually came off Redbluff from the west onto north 146 with the rear of the car swinging out like in the movies)
Did not have a scanner with me. Seemed they were heading to Shoreacres/LaPorte area.
Thanks.
Brian Alley.

From: Adam@internick.com
Topic: 2422 Message: 2425

Myles,

Three "taps" would mean they were calling for three more additional
pumpers to make the location. Taps can be used to get a few additional
pieces of apparatus there without having to pull another alarm.

Does anyone know of the frequency to hear the Shuttle Communications?

I've tried 146.940 & 171.150 (an old frequency) but am not getting anything Shuttle related.

Thanx!

BI

2437. Re: [HoustonScan] Space Shuttle Audio

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-06 02:20:56 UTC
From: Myles Barkman
Topic: 2436 Message: 2437

The best frequency in town to hear shuttle audio is 146.640 MHz transmitting from the Clear Lake area.
The 171.150 MHz signal is weak and only really usable near NASA in Clear Lake.

2441. [Fwd: [WSWSS] Antenna Bill In Congress - IMPORTANT]

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-07 20:07:25 UTC
From: cboone@earthlink.net
Topic: 2441 Message: 2441

FYI for those hams who have to fight CC&Rs vs outside antennas!!
Now is the time to write!

-------- Original Message --------
Subject:Antenna Bill In Congress - IMPORTANT
Date: Fri, 07 Jun 2002 09:06:46 -0700

This is important! If you thought that PRB-1 was great, then this is
awesome. We need to make sure this bill gets passed! Read the rest of
the
message below. There is a link to the ARRL where you can find a sample
letter to cut and paste to your Congressman. There is also a link to
find
out who your Congressman is, once you get to the ARRL site. This will
take
all of 5 minutes to do, and the more people who e-mail their
Representatives, the better... So take 5 minutes right now and do
this. It may make the difference between this bill making it, or not.

Antenna Bill - H.R. 4720 Introduced in US Congress

A bill introduced in Congress May 14 would provide relief to amateurs
prevented by private CC&Rs from installing outdoor antennas. Rep Steve
Israel (D-NY) introduced the "Amateur Radio Emergency Communications
Consistency Act." The measure--H.R. 4720--would require private land-use
regulators to "reasonably accommodate" Amateur Radio antennas consistent
with the limited federal preemption known as PRB-1, which now applies
only
to states, counties and municipalities.

H.R. 4720 has already been assigned to the Commerce Committee.
Congressman
Israel's office is receiving a lot of interest in this bill. Now is the
ideal time to write to your own Congressman/woman and ask him/her to
become
a co-sponsor of H.R. 4720. The full story on H.R. 4720 is located at:
http://www.arrl.org/news/stories/2002/05/14/102/?nc=1 At the end of the
article are instructions on how to write to your Representative (using
e-mail) and a sample letter. Two key points to make are: a) the bill is
necessary for Amateur Radio to fulfill its role in Homeland Defense and
b)
the bill is non-partisan. Please write today!

Noticed some changes and additions in some STAR-Net talkgroups as displayed
on Lindsay Blanton's web page
http://www.trunkedradio.net/cgi-bin/display.pl?sid=38

Can someone verify these talkgroups as being changed?
15664 West I-10 VFD A (was on 15728)
15696 West I-10 VFD B (was on 15760)
15728 West Harris County EMS 1 (was on 15792)
15760 West Harris County EMS 2 (was on 15824) also Westlake VFD Ch.2 (was on
15920) and Cy-Fair VFD
15888 still Westlake VFD Ch.1
this leaves these talkgroups abandoned(?)
15792
15824
15856
15920
Can someone verify these new talkgroups as being used?
18480 HCSO District 5 Dispatch
18512 HCSO TAC-5
18800 HCSO TAC Northwest A
18864 HPD Helicopter (Fox)
19120 HCSO District 6 Dispatch
19120 HCSO TAC-6 (probably a typo)

Many of these talkgroups are used on the west side of the county where I
can't hear Clodine/Tomball so might need help from folks over there to
verify most of these.
I can verify traffic on 15888 on the downtown site

15760 West Harris County EMS 2 (was on 15824) also Westlake VFD Ch.2
(was on
15920) and Cy-Fair VFD
15888 still Westlake VFD Ch.1
this leaves these talkgroups abandoned(?)
15792
15824
15856
15920
Can someone verify these new talkgroups as being used?
18480 HCSO District 5 Dispatch
18512 HCSO TAC-5
18800 HCSO TAC Northwest A
18864 HPD Helicopter (Fox)
19120 HCSO District 6 Dispatch
19120 HCSO TAC-6 (probably a typo)

Many of these talkgroups are used on the west side of the county where I
can't hear Clodine/Tomball so might need help from folks over there to

verify most of these. I can verify traffic on 15888 on the downtown site

2449. Re: little help?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-10 14:50:42 UTC
From: bpckty1
Topic: 2445 Message: 2449

Myles, and all,

The last time I checked, this morning, this is what I found:

> Can someone verify these talkgroups as being changed?
> 15664 West I-10 VFD A (was on 15728)
New to me, may be new tac channels, I haven't heard any traffic yet.

> 15696 West I-10 VFD B (was on 15760)
Also, new to me.

> 15728 West Harris County EMS 1 (was on 15792)
Still West I-10 FD Dispatch. Often there is a multi dispatch which is broadcast for W I-10 and surrounding departments. This may be somewhat confusing when everyone comes up on this talkgroup.

> 15760 West Harris County EMS 2 (was on 15824) also Westlake VFD Ch.2 (was on 15920) and Cy-Fair VFD
Still West I-10 FD ch 2. Often the same as 15728.

> 15888 still Westlake VFD Ch.1
Still the same.

> this leaves these talkgroups abandoned(?)

> 15792
Still used by WHCEMS
> 15824
Still used by WHCEMS, usually by supervisors
> 15856
Still used by WHCEMS, usually by supervisors
> 15920
Still used by Westlake VFD, usually for special events

> Can someone verify these new talkgroups as being used?
> 18480 HCSO District 5 Dispatch
> 18512 HCSO TAC-5
> 18800 HCSO TAC Northwest A
> 18864 HPD Helicopter (Fox)
> 19120 HCSO District 6 Dispatch
> 19120 HCSO TAC-6 (probably a typo)
These are new to me. They are probably part of the new re-disricting plan for the Sheriff's Department, but not yet authorized to transmit by the Radio Service.

> Many of these talkgroups are used on the west side of the county where I can't hear Clodine/Tomball so might need help from folks

over there to verify most of these.
Most of the Fire Department/EMS groups are SmartZone assigned to the Clodine tower (primary) and the Downtown tower/building (secondary), so unless one of their units is close to downtown, they probably won't affiliate, therefore they will be silent to a listener in another part of the Houston area. I notice this also happens with Baytown and Chambers County units when I monitor from my West Harris County spot.

> I can verify traffic on 15888 on the downtown site
They are closer (barely) to downtown than West I-10 FD, which may account for this.

2450. Scanner upgrade.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-10 15:13:46 UTC
From: Mike Urich
Topic: 2450 Message: 2450

With what is seemingly everyone moving to UHF trunked systems I'm going to have to upgrade and supplement my old RS Pro-2026 with something else. I'll keep the 2026 for other things, BTW. I'm beginning to look around at what's available and am willing to make a somewhat "sizeable" investment. I will entertain any suggestions based upon your experience(s) especially negative ones so I don't make a mistake.

> I've tried 146.940 & 171.150 (an old frequency) but am not getting
> anything Shuttle related.

Mike wrote

The 171.150 freq still works but the last I knew its only about 5 watts into a 1/4 wave vertical on top of Bldg 2 at JSC. The antenna is only about 80' HAAT so the range to a handheld scanner is only going to be about 10-12 miles on average.

Get a yagi antenna mount it as high as possible (or need) and point it towards JSC. Also monitor 146.64, however, when the repeater is in use it will override the shuttle audio. However most of the hams minimize their traffic on the repeater when shuttle audio is on.

While it doesn't classify as a "scanner" I had an old RS Patrolman VHF-LO / VHF-HI reciever (don't remember the model #) that you dialed in the frequency like you would an AM/FM radio. It also had a spot for two crystal's, one on LO and one on HI. I loaned it out and never got it back. :-(

If your looking to do just 800 trunked I would wait till the new uniden digital comes out, if you are in a hurry
and wish to do it now and want A modestly priced scanner that will do just about all you want I would seriously
recommend the rad shack 2053 dual scanner with soft ware ready to go from scan pro.It can also clone the pro 93
scanner for hand held use. If not then you can, for around $349.00 buy the uniden 780 xlt scanner, right now the top of line
for this price range with a multitude of software packages for it. I have both and I find both do a superb job with the pro2053
for me having a finer tuner then the 780 and less jamming in a high environment area just my thoughts .

regards
sandyj

FYI, for those of you listening with old trunktrackers (BC235), the
TAC-2 talkgroup is coming up 12691 now.
Can someone explain to me what exactly goes on when the number
changes by three? Is this what they call "Multiselect"?
Many of the Metro Metrolift talkgroups are like this too as well as
Central Dispatch on 14896 (14899).
Break it down to someone not in the "comm business".

Two or more talkgroups have been combined so one dispatcher can work more than one channel at the same time. In this case it was Tac 2 and Central Ops. Normally, Central Ops and Information (channel 10) are combined.

From: gtmustang9814
Topic: 2472 Message: 2472

hey, i have posted before love this site. I will scanning today and heard a fire alarm that was an actually fire at baylor college of medicine. contained, district 49 was dispatched containing, 16 Engine, 16 Ladder, 33 both and 7 both. anyway i wanted to know if i would avoid dropouts and get better comuncations with a trunk scanner, cause i think the model i have now just supports UHF pro-scanner 70 i think i will go with a 93 or even the new 94 ur opinions please.

2481. Humble area

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-18 03:14:18 UTC
From: Myles Barkman (home)
Topic: 2481 Message: 2481

My work brought me to Humble today. Took the scanner to verify the Huffman STAR-Net freqs and see what talkgroups I could pick up on it.
These frequencies I verified:
868.975, 868.125, 868.0375, 967.925, 867.5875, 866.600, 866.450, 866.375
These were previously thought to be part of the system but I heard no key ups at all:
866.0375, 867.4625
Can someone with Trunker verify which freqs are part of this site?
Didn't hear any real site-specific talkgroups.

I also listened to Humble PDs conventional channel on 867.2125 MHz.
They didn't talk enough for me to really get a feel for the range if it.

Before I left work, I noticed that I had nothing in my list for Deerbrook Mall. I parked in the parking lot for a little while and did some searching which only resulted in hearing lots of LTR systems in the UHF business bands.
Looking at Ed Lentz's last list (1997), it shows 463.6375 and 469.550 MHz.
I didn't have this info when I went out there, unfortunately. Can anyone verify what freqs Deerbrook Mall are operating on? I can't find anything licensed for Deerbrook Mall or their management company.

Date: 2002-06-19 03:26:52 UTC
From: Edward Lentz
Topic: 2487 Message: 2487

Well darn. Since I moved from Pasadena last November to almost within sight of the Huffman tower guess I need to shed a bit of info. I'll have to set up Trunker in the next day or so and see what I come up with.

Deerbrook mall is one of our stops along with Baytown. We are about halfway between both. Will see what I come up with.

2490. [CrisisAlert] Houston-area Alert

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-19 04:17:59 UTC
From: scasko@aol.com
Topic: 2490 Message: 2490

<< I took it at face value since CrisisAlert tends to be reliable. I thought Houston area scannists would enjoy monitoring the event. Hopefully (?) it's true. However now that I think about it a LIVE fire exercise in populated areas? >>

<<KTRH reports military training exercises will take place in and around Houston>>

I think the emphasis here should be on the "in and around" part. There has been military training done here fairly often, but it is usually pretty far on the outskirts of town. I think they've used the old El Mercado Del Sol and some of the abandoned warehouses on the east side of town, but they've also been way south using TDC property. There might be some ANG helicopters running offcers from various agencies around practicing rappelling onto roofs of buildings (both the officers and the pilots getting some practice in) but that is all I expect anyone would be likely to see.

The last time this happened, there was some helicopter activity in/around downtown Houston, late at night. But, most "live fire" activities were at or near Ellington Air Field, the Addicks/Barker Dam areas (National Guard training areas near Briar Forest/Westheimer/and Hwy 6)and other Corps of Engineer areas inside the flood containment areas, Hooks airport, Conroe, and, of course, the infamous "abandoned warehouses and factories" and the "spoils area" east of the East Loop along the Ship Channel near Galena Park/Pasadena.

This time, who knows where the scenarios will be.

2492. web surfing

Yahoo group: HoustonScan (1999 — 2002)

From: Myles Barkman (home)
Topic: 2492 Message: 2492

In my search to find any mention of the upcoming military exercises in this area, I stumbled on this "interesting" website:
http://houston.indymedia.org/
I guess you could call this "alternative news" or what some people might claim "the rest of the story".
I'm not endorsing this site nor discrediting it.
Just reminds me of pirate shortwave stations.

I know there are a few hams on the list. How about a posting of where some of the field day events are going to be.
For non hams it is a great time to go out and operate a radio and not have to have a Amateur Radio license.

Brazos Valley Ameteur Radio Club will be at George Bush Park (near hwy. 6 and Westheimer) in pavilion # 1.

If others know of other sites please post them.

Thank you
Dwayne

2500. TX DPS chooses EF Johnson

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-20 21:30:45 UTC
From: Edward Lentz
Topic: 2500 Message: 2500

Department of Public Safety Places $933,000 Radio Order

LINCOLN, Neb., June 19 /PRNewswire-FirstCall/ --
EFJ, Inc.
(OTC Bulletin Board: EFJI) announced that its EFJohnson
Company subsidiaryreceived a radio contract from the
Texas Department of Public Safety (DPS).EFJohnson will
supply the State with its new 5100 series portable
radios to be operated by the Traffic and Law
Enforcement (TLE) division of the DPS. The portable
radios will be used on the State's VHF Project 25
digital communications system.
"This marks the second recent award for our new
5100 series portables,"said Michael E. Jalbert, EFJ
chairman and chief executive officer. "With the
successful implementation of these radios, we hope this
is the beginning of a long-lasting relationship with
the Texas DPS system."
"The State conducted a thorough evaluation of the
portable radios, and we were able to demonstrate the
compatibility of our products on their Project 25
system," added David L. Hattey, president and general
manager of EFJohnson. "This adds to our success in
offering the industry truly Project 25 compliant
portable and mobile radio products."
The EFJohnson Company (http://www.efjohnson.com),
founded in 1923, provides wireless communications
systems solutions for public safety, commercial, and
government customers. The company designs,
manufactures, and markets conventional and trunked
radio systems, land mobile radio repeaters
and mobile and portable radios, including Project 25
digital radio products. EFJohnson is a wholly owned
subsidiary of Transcrypt International, Inc.
EFJ, Inc. (http://www.transcrypt.com) designs,
manufactures and markets trunked and conventional radio
systems, stationary land mobile radio transmitters and
receivers, including mobile and portable radios, and
manufactures information security products that prevent
the unauthorized interception of sensitive voice and
data communication.

Certain matters discussed in this press release
constitute forward-looking statements within the
meaning of the Private Securities Litigation Reform Act

of 1995. These forward-looking statements relate to, among other matters, the
Company's continued development of Project 25 products and infrastructure equipment, customer demand for the Company's products, including its digital interoperable and SMARTNET(R) / SmartZone(R) wireless communications solutions, and the Company's future financial performance and position. These forward-looking statements are subject to certain risks and uncertainties that could cause the actual results, performance or achievements to differ
materially from those expressed, suggested or implied by the forward-looking statements due to a number of risk factors including, but not limited to, the level of demand for the Company's products and services, dependence on
continued funding of governmental agency programs, and other risks detailed in the Company's reports filed with the Securities and Exchange Commission, including its Annual Report on Form 10K for the year ended December 31, 2001.

John,
Field Day officially kicks off Saturday at 1pm...if you want more
info on Field Day, you can go to www.arrl.org and they will have
the rules and info on it there (you might have to go to the Index
to get to it)

Chris
WB5ITT
IT/Radio Asst Chief Egr
Liberman - Houston

(Im headed to the BPT area to operate with my old hometown club :)

Yes I know that I gave my phone out to everyone it is a work phone so I have to answer it any way.

I have sent to hotmail before and takes awhile for him to answer that one.
Dwayne

Really what I need is to know if I don't have the control freq. or what I might have done wrong. So
anyone that has listened to Chambers can call me.
Dwayne

2514. Re: Chambers County TRS

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-25 04:09:02 UTC
From: Myles Barkman (home)
Topic: 2514 Message: 2514

Looks like at least a couple of folks are having problems with the Chambers County STAR-Net site.
Anyone have the latest frequencies in use?
This one is too far away for me to hear.
This is what I had last time I heard them from Baytown some time ago:
866.200,866.750,867.4375,867.7875,868.425

These frequencies are also licensed but I did not hear them used at the time:
867.0375,868.550,868.825

Notice I trimmed a lot of the unnecessary and growing lines of fluff from the reply (hint hint). These things tend to grow exponentially.

Chambers Co is what I want to hear. Well at least the DPS that run in Chambers. DPS uses the S.O.
dispatch to call out on traffic. If the Baytown tower will carry all the way to Winnie that is
good enough.

> Dwayne

Please note that DPS units in Chambers County are probably using the Harris County DPS talkgroup since the big switch. I'd program both talkgroups into your scanner(s), since I have heard DPS units assigned to Chambers County on the Harris County talkgroup discussing important items, such as where to neet (go for lunch?) where they can discuss business matters in private.

Happy Scanning

Hello folks! I'm new to the group. I've been trying to find the HC Sheriff in the Hwy6/290 (Copperfield) area. I haven't been able to find a local tower and wondering if anyone knew which tower they are on or have their frequency.

Thanks!

My apologies if you got this twice.

A bum, who obviously has seen more than his share of hard times, approaches a well-dressed gentleman on the street. "Hey,Buddy, can you spare two dollars?"

The well-dressed gentleman responds, "You are not going to spend in on liquor are you?"

"No, sir, I don't drink," retorts the bum.

"You are not going to throw it away gambling, are you?" asks the gentleman.

"No way, I don't gamble," answers the bum.

"You wouldn't waste the money at a hamfest for radio equipment, would you?" asks the man.

"Never," says the bum, "I am not a ham."

The man asks the bum if he would like to come home with him for a home cooked meal. The bum accepts eagerly.

While they are heading for the man's house, the bum's curiosity gets the better of him. "Isn't your wife going to be angry when she sees a guy like me at your table?"

"Probably," says the man, "but it will be worth it. I want her to see what happens to a guy who doesn't drink, gamble or go to hamfests."

Date: 2002-06-29 20:00:49 UTC
From: Peter Kirk, IPN-PEN Admin
Topic: 2522 Message: 2522

Does any one know why Cy-Fair VFD is asking the FCC for more UHF Freqs?

Cy-Fair VFD FCC PENDING Level 2 ATT
LIC# 0000929430

CY-FAIR VOLUNTEER FIRE DEPARTMENT INC / 0000929430 Pending Level 2 CYPRESS
PW

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/lic_state_res.hts?db_id=1
9&rows=0&sndx=CYFARVALANTA%&state=TX

453.2250 / 458.2250
453.9750 / 458.9750
453.0625 / 458.0625
453.5500 / 458.5500
453.0750 / 458.0750
453.9375 / 453.9375

Does anybody know what they will be used for after they pass Level 2
Approval?

The Only freqs I see lic att to Cy-Fair are:

WPTK356 PW

1 453.6000 / 458.6000
2. 453.3500 / 458.3500

WPSG870 IB

1. 461.3250 / 466.3250
2. 461.9500 / 466.9500
3. 463.3250 / 468.3250
4. 462.0500 / 467.0500

What are the current Freqs used for? And why did they want these 4 sets of
freqs out of the Business band and not the Public Safety Pool?

Thanks in advanced....

Hi Erich;

I'm curious - what were the hazards of using "low band"? Also which range or specific set of frequencies are you labelling as "low band" ?

Regards,
Rick Parrish

Rusty,
what make of lowband gear were you folks using? wasnt it Motorola?
I looked at the telco line to the site near Fry road 7 years ago when
there was some issues with levels, etc....and I think I saw
Motorola consoles...but not sure of the actual radios!

True, lowband (33 and more so the upper end at 47-49) is terrible
with line noise (a requirement in my book is that LB MUST have a
noise blanker).....plus the antenna size can get in the way nowadays!
The Fry road location was torn up by line noise from HL&P...the
35KV line for distributuion was right south of their bldg with the
antenna on the tower.....and I dont think their radio had a NB.

Not to mention HTs, etc on LB dont cover worth a flip...one reason
my former company (GSU, now part of Entergy) left 48 MHz for
800MHz....but found out the hard way if you dont use them you lose
them....(a lot of the 800 MHz channels GSU had gotten licensed
years ago became active with cochannel users in Houston....
and is tearing up the system in Conroe and Navasota...)
Before we went to 800 (which was an Entergy idea to make it
company wide across the 4 states), I had started using UHF to
LB mobile rptr systems in the Midland Syntech II series...the
field guys loved it!!! (Luckily I was able to scarf a couple
of them when we went 800Mhz...they work real good on 6mtr FM
ham! :)

Rick,

We had absolutely nothing but problems. It was equipment related. We were using mostly Kenwood TK-630's, TK-690's and a couple of Motorola Maratrac's. I really don't believe the equipment was a problem. Our coverage just wasn't there. The UHF system has made a tremendous impact on our operations. The biggest adjustment we have had to make is teaching our people to wait for the repeater to key up and how repeaters work (i.e. talk around/direct operations). Another big change has been the number of our members that were finally able to purchase radio equipment that they didn't have to take out a 2nd mortgage to finance their purchase (sometimes that's a bad thing too)! We also added ANI devices to all of our equipment with emergency buttons. It was a 2 year project but very well worth it.

Thanks Rusty - between response from you
and Chris Boone I think I get the picture.

One last question - are the problems in this band a
result of (1) mediocre equipment, (2) RF
"contaminants" from neighboring users (ie. CB, TV
Channel 2, cordless phones, etc.) or (3) the
propagation characteristics of the band in general
(like unpredictable skip or ducting).

Cheers,
Rick

Mike wrote

Not speaking for them but understanding their system since I was a member of
CFVFD Sta6 many years back. Mediocre equipment in not an issue, Motorola or
any other name brand gear is just as good on VHF-Lo as any other band.
RFI/TVI from CB'ers or TV-Ch2 is not an issue. The problems are;

No repeaters on the band
Poor simplex range using HT's ... mobiles isn't too bad
Long antennas for anything that resembles a 1/4 wave

All this creates a "clumsy" (sp?) communications package.

Actually, the freqs as I see them in the database show them as:
453.225 and 453.975 repeaters
458.0625 simplex (to use with Northwest VFD fireground? La Porte us using this repeater pair for some data transmissions)
458.075 simplex (could this interfere with 458.0625? You show to use 45W on this channel)
458.550 simplex (this could potentially interfere with Jacinto City VFD on their 453.550 repeater even though only 4W (?))
458.9375 simplex (to use with Northwest VFD fireground?)

Also, I just noticed that La Porte VFD is now licensed on a new repeater pair in addition to their current repeater.
The new repeater is 154.325 output with 150.775 input. Don't know if it is in operation yet. Guess this means they are not planning on hopping on Pasadena's trunk system any time soon.

2535. aircraft advisories

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-06-30 21:31:12 UTC
From: Myles Barkman (home)
Topic: 2535 Message: 2535

Here's some interesting text on advisories to aircraft:
A0015/01 - ATTENTION INTERNATIONAL OPERATORS: INTERFERENCE IMPACTING AERO-NAUTICAL AIR TRAFFIC FREQUENCIES CAUSE BY ILLEGAL HIGH POWER CORDLESS TELEPHONES. THE MIAMI AIR ROUTE TRAFFIC CONTROL CENTER (ZMA ARTCC) HAS EXPER- IENCED RADIO FREQUENCY INTERFERENCE (RFI) ON FREQUENCIES 134.2, 134.6 MHZ RESULTING FROM THE UNAUTHORIZED USE OF HIGH POWER CORDLESS TELEPHONES IN THE BAHAMAS AND ON FREQUENCY 133.85 MHZ FROM THE USE OF HIGH POWER CORDLESS TELEPHONES IN MIAMI. THE CLEVELAND AIR TRAFFIC CONTROL CENTER ARTCC (ZOB) OPERATIONS WERE ALSO IMPACTED DUE TO RFI ON FREQUENCY 134.65 MHZ, FROM THE UNAUTHORIZED USE OF HIGH POWER CORDLESS TELEPHONE LOCATED IN HARRISON, MICHIGAN. HIGH POWER CORDLESS TELEPHONES ARE BEING USED ILLEGALLY IN THE U.S. AND THE BAHAMAS. THESE PHONES CAN INTERFERE WITH THE FREQUENCIES USED FOR AIR TRAFFIC CONTROL WORLDWIDE AND CAN POSE PROBLEMS TO ATC NAVIGATION AND COMMUNICATIONS. PART 1 OF 2 WIE UNTIL UFN

A0015/01 - THE FAA IS WORKING WITH OTHER GOVERNMENT AGENCIES WITHIN THE UNITED STATES AND OTHER COUNTRIES TO CURTAIL ILLEGAL USE OF THESE PHONES AND IS APPROACHING VENDORS TO CEASE DISTRIBUTION AND PRODUCTION OF UNITS THAT OPERATE IN OR CAUSE INTERFERENCE TO CRITICAL AERONAUTICAL RADIO SPECTRUM. USERS OPERATING ON THESE FREQUENCIES SHOULD BE AWARE THAT NAVIGATION AND COMMUNICATION COULD BE SEVERELY IMPACTED DUE TO RFI OF THESE HIGH POWER CORDLESS TELEPHONES. USERS OF AERONAUTICAL RADIO NAVIGATION AND COMMUNICATION SERVICES WHO EXPERIENCE THIS TYPE OF INTERFERENCE SHOULD REPORT ANY EVENT IMMEDIATELY TO THE AIR TRAFFIC FACILITY PROVIDING AIR TRAFFIC SER- VICES. IF THIS IMMEDIATE REPORT IS UNACHIEVABLE, THE USERS SHOULD MAKE A REPORT TO THE NEAREST AIR TRAFFIC FACILITY AT THE EARLIEST TIME POSSIBLE AFTER THE RFI EVENT. PART 2 OF 2 WIE UNTIL UFN

A0157/01 - ... SPECIAL NOTICE ... FLIGHT RESTRICTIONS EFFECTIVE IMMEDIATELY UNTIL FURTHER NOTICE, PURSUANT TO 14 CFR 99.7, SPECIAL SECURITY INSTRUCTIONS, OPERATIONS WITHIN THE TERRITORIAL AIRSPACE OF THE U.S. THIS IS A RESTATEMENT OF A PREVIOUS ADVISORY. PILOTS ARE ADVISED TO AVOID THE AIRSPACE ABOVE, OR IN PROXIMITY TO, SITES SUCH AS NUCLEAR POWER PLANTS, POWER PLANTS, DAMS, REFINERIES, INDUSTRIAL COMPLEXES, MILITARY FACILITIES AND OTHER SIMILAR FACILITIES. PILOT SHOULD NOT CIRCLE AS TO LOITER IN THE VICINITY OF SUCH FACILITIES. WIE UNTIL UFN

A0158/01 - ... SPECIAL NOTICE ... FLIGHT RESTRICTIONS EFFECTIVE IMMEDIATELY UNTIL FURTHER NOTICE. PURSUANT TO 14 CFR SECTION 99.7, SPECIAL SECURITY INSTRUCTIONS. THIS IS A RESTATEMENT OF A PREVIOUS RESTRICTION. ALL AIRCRAFT OPERATIONS ARE PROHIBITED WITHIN A THREE NAUTICAL MILE RADIUS/ 3000 FEET AGL AND BELOW OVER ANY MAJOR PROFESSIONAL OR COLLEGIATE SPORTING EVENT OR ANY OTHER MAJOR OPEN AIR ASSEMBLY OF PEOPLE UNLESS AUTHORIZED BY ATC. WIE UNTIL UFN

A0099/01 - ZZZ U.S. NATIONAL AIRSPACE SYSTEM INTERCEPT PROCEDURES. UNTIL FURTHER NOTICE ALL AIRCRAFT OPERATING IN THE U.S. NATIONAL AIRSPACE, IF CAPABLE, WILL MAINTAIN A LISTENING WATCH ON VHF GUARD 121.5 OR UHF 243.0. IT IS INCUMBENT ON ALL AVIATORS TO KNOW AND UNDERSTAND THEIR RESPONSIBILITIES IF INTERCEPTED. REVIEW "AERONAUTICAL INFORMATION MANUAL" SECTION 6, 5-6-2 FOR INTERCEPT PROCEDURES. WIE UNTIL UFN

A0119/01 - ... SPECIAL NOTICE ... RESTRICTED/PROHIBITED AREA ENFORCEMENT EFFECTIVE IMMEDIATELY, COMMERCIAL AND PRIVATE AIRCRAFT FLYING INSIDE, OR IN CLOSE PROXIMITY TO, NEWLY ESTABLISHED OR CURRENTLY EXISTING RESTRICTED OR PROHIBITED AREAS OF THE UNITED STATES WILL BE SUBJECT TO BEING FORCED DOWN BY ARMED MILITARY AIRCRAFT. IF NECESSARY, THE MILITARY HAS INDICATED THAT DEADLY FORCE WILL BE USED TO PROTECT THESE AREAS FROM UNAUTHORIZED INCURSIONS. THESE MEASURES ARE NECESSARY IN RESPONSE TO THE TERRORIST ATROCITIES OF SEPT. 11, 2001, WHICH CAUSED THOUSANDS OF INNOCENT CIVILIAN CASUALTIES. THE MILITARY WILL USE DEADLY FORCE ONLY AS A LAST RESORT, AFTER ALL OTHER MEANS ARE EXHAUSTED. THIS NEW POLICY IS IN EFFECT UNTIL FURTHER NOTICE. OFFICIAL CHARTS OUTLINING THE NEW RESTRICTED OR PROHIBITED AREAS WILL BE MADE AVAILABLE AS SOON AS POSSIBLE. THESE AREAS WILL BE PERIODICALLY REVISED AND WILL THEREFORE REQUIRE THAT EACH PILOT RECEIVE AN UP TO DATE BRIEFING ON THE STATUS OF THESE AREAS PRIOR TO EVERY FLIGHT. IN ADDITION, ALL AIRCRAFT OPERATING IN THE U.S. NATIONAL AIRPSACE AND IN CLOSE PROXIMITY TO THE SUBJECT AREAS, IF CAPABLE, WILL MAINTAIN A LISTENING WATCH ON VHF GUARD 121.5 OR UHF 243.0. IT IS INCUMBENT ON ALL AVIATORS TO KNOW AND UNDERSTAND THEIR RESPONSIBILITIES IF INTERCEPTED. REVIEW AERONAUTICAL INFORMATION MANUAL SECTION 6, 5-6-2 FOR INTERCEPT PROCEDURES. WIE UNTIL UFN

I think the just of the Flight Restriction is to "not" draw undue attention to yourself should you choose to fly near one the named items. It should also be pointed out that in the Houston area, almost all aircraft that are in close proximity to these area are under the control of Houston Approach Control.

For most IFR flights, it would not be a problem to avoid these items as you are being vectored by ATC. IF you are VFR, then you should use caution. IF you draw too much attention to yourself, then you will likely receive a visit from your local Air National Guard Unit.

Happy Scanning and Flying!

But how do you you get from say Beaumont or South Louisiana to Houston Hobby without flying in 'close proximity' to any of the listed areas? Seems just another way for the G to take rights from average citizens. I have not even seen a defintion of what 'close proximity' amounts to, is it 5 miles, 50 miles or what. Even in a Cessna, at 5 miles radius one could be on top of a plant before they could think about scrambling jets to the site, seems kind of ridiculous to me.

Interesting that all the flooding occurring in the Austin/San Antonio area will create an impact to areas as close to this area as Columbus, Wharton and Bay City.
The Colorado River in La Grange is forecast to rise another 13 feet from 8 feet by Thursday afternoon. Unknown what impact is expected further downstream.
Folks who can hear the LCRA 900 MHz EDACS system should be getting an earful of activity the closer you get towards Austin/SAT.
I think the Hill Country was experiencing a drought before this happened.
Be careful what you wish for. I bet the burn ban has been lifted although I don't think there will be much cause for celebration in South/Central Texas until the flooding is over.

Here's what I've heard, up to 3PM:

City of Houston Talkgroups.

33808 Hermann Park and Zoo area
34448 Buffalo Bayou Activities
34480 Buffalo Bayou Activities
35600 Buffalo Bayou Activities
37136

HPD channel 5, 460.4250 Buffalo Bayou Activities
HPD channel B3, 460.5250 Hermann Park and Zoo area

Aircraft, probably for other sites too, 123.4500, and 123.0250.
I'd also monitor 122.7500, 123.4000, 123.4250, 123.4750.

FBI 167.7875. Well, they ARE there, but they are encrypted.

F-16s are probably transmitting in Have Quick or Red modes.
Boo-Hiss for us.

The flood waters of the Colorado River are propagating downstream towards the Gulf. While not causing any flooding, they are still causing the river to rise quite a bit for not having any rain in the immediate area.
The level in Wharton is expected to go up to banefull stage, 20 feet, Friday evening, with it continuing to rise to 25 feet by Saturday evening. No fear though, flood level is 39 feet so unless we get some hard rain ourselves, the folks around here will just see a lot of muddy river water a lot higher than normal.

Not so lucky for folks in the Hill Country though. Water is coming over the spillway from Canyon Lake which is part of the Guadalupe River. The Guadalupe River is going to flood Friday in New Braunfels and Sattler and the San Marcos River is flooding Luling.

Other rivers in the San Antonio area are going to be or have been 30 feet above flood stage.
The city of Bandera is totally isolated. All highways into Bandera County are closed.
These folks are not having a happy 4th.
There are storms STILL over the area now and forecast over the area tomorrow. May start tapering off Saturday and ending Sunday.

Many of us know what they are going through having been through Allison.
Not a lot you can do about mother nature.

Howdy;

I've got a question for the group but first some background. Here's
a link to a New York Times article (from Marcel). I've quoted
the relevant parts below if you don't want to read the whole thing.

http://www.nytimes.com/2002/07/07/nyregion/07EMER.html

---------- begin quoted artice ----------
"Minutes after the south tower collapsed at the World Trade Center,
police helicopters hovered near the remaining tower to check its
condition. "About
15 floors down from the top, it looks like it's glowing red," the pilot
of one
helicopter, Aviation 14, radioed at 10:07 a.m. "It's inevitable."

Seconds later, another pilot reported: "I don't think this has too much
longer
to go. I would evacuate all people within the area of that second building."

Those clear warnings, captured on police radio tapes, were transmitted 21
minutes before the building fell, and officials say they were relayed to
police
officers, most of whom managed to escape. Yet most firefighters never
heard those warnings, or earlier orders to get out. Their radio system
failed
frequently that morning. Even if the radio network had been reliable, it
was
not linked to the police system. And the police and fire commanders guiding
the rescue efforts did not talk to one another during the crisis.

Cut off from critical information, at least 121 firefighters, most in
striking
distance of safety, died when the north tower fell, an analysis by The New
York Times has found."
---------- end quoted artice ----------

Okay, now for the question - do the HPD "fox" helicopters have
the ability to communicate with HFD directly from the cockpit?

On a related note - a few weeks ago I spotted HPD using a helicopter
over 610 Loop West near Uptown Park for some sort of exercise.
The exercises centered around the helipad on top of the Landry's
corporate building there on 610. The chopper would land; pick up
two guys who would hang on to the doors with their feet on the skids
(one on each side). The chopper would then take off - head down
along the freeway a few blocks; circle back and land. This was

repeated a dozen or so times.

Now, seeing helicopters come and go is no big deal (there are quite a few helipads in the Galleria area) but seeing some guy hanging out the side with a big grin on his face as he flies past the office window gets my attention!

Yes, I have heard Fox talking to HFD dispatch and HFD units, as well as various PD and FD agencies around our area. Helicopters are expencive to maintain, much cheaper to "rent".

Mike wrote

I'm positive that 9.11 has changed a *LOT* of things in emergency management. To what extent these changes have been made or will be made I have no clue. I work for the engineering business unit of a very large commercial/personal insurer. I remember when HCC (Houston Chemical Complex) blew on Oct 23, 1989. That incident turned the entire commercial property insurance industry upside down and changed the way large commercial, (especially petro/chem) accounts are not only written but engineered. As sad and unfortunate 9.11 (or HCC for that matter) was, the lessons learned will be invaluable over the years.

In a related area, here is a little note off the LMR remailer
(of which I am moderator)...you GOTTA look at the powerpoint
presentation at the URL mentioned below: The idiots at Nextel must
be hiring former Authur Anderson executives :) !
Chris

In a related item, Nextel said at a public safety meeting in Washington
DC that Public Safety owned systems with back-up power supplies and
redundant microwave were "over engineered" from a cost viewpoint.

In the same presentation, Nextel advised everyone;
"Don't leave communications system design to engineers or technicians.
Get a bean counter involved."

Get your own copy at...

http://ntiacsd.ntia.doc.gov/pubsafe/Agenda/Day%202/Nextel.ppt

You have to wonder how may public carrier systems would withstand a
power loss. But I may be wrong.....

Mike wrote

I remember that before the pre 1994 floods in N/E Harris and S Montgomery counties many emergency management personal had grown so dependent upon cell phones that they totally disregarded both Amateur and REACT (UHF users not CB'ers) as a form of emergency communications. As the flood waters rose and more and more cell sites succumbed to the water including Montgomery Counties primary repeater site and the 147.02 repeater, cell phones became more and more unreliable as the lines became clogged with users.

Now I do believe but don't know for sure that if two Nextel users (in the two way mode) are "into" the same tower, that tower should act as a normal "repeater" for them. But if one moves off enough to where the S/N ratio changes and they get bumped to a different site all bets are off. I do remember about 10 years ago while living outside Indy a pair of local yahoo's took their FT-11R's and did the 800-900 mHz conversion on them and were using cell towers for repeaters until the FCC clipped their wings.

<< Okay, now for the question - do the HPD "fox" helicopters have
the ability to communicate with HFD directly from the cockpit?>>

Yes, but the last time I heard them they had their radio programmed for the
ambulance Dispatch channel instead of the Tac channel. The HFD Dispatcher
was, to say the least, very disinterested in helping them. As of the last
time I flew with them (last year) they did not have an 800 radio. We went
out to Chambers county late last year to help them look for some drug suspect
and Fox could not communicate with them at that time. It was a disaster, HPD
(UHF), Chambers County (800), and DPS (VHF) all trying to coordinate a large
area search....

<< On a related note - a few weeks ago I spotted HPD using a helicopter
over 610 Loop West near Uptown Park for some sort of exercise.
The exercises centered around the helipad on top of the Landry's

Red meat is not bad for you.
Fuzzy green meat is bad for you.

If you think there is good in everybody
then you obviously haven't met everybody.

It's paradoxical that the idea of living a long life appeals to
everyone, but the idea of getting old doesn't appeal to anyone.

Three cellmates in a Soviet cell compared notes.
"I was jailed for coming late to work," mourned the first.
"Me? I came too early," recounted the second.
"They said this proved I was a Capitalist spy."
"And I'm here, " complained the third, "because I arrived
exactly on time. They accused me of owning an American
watch."

Yup, that sounds like Jack. According to a post on the Nextel list, Nextel does not put their cell sites behind a UPS. When the lights go out - so does your phone.

And yes, up until recently Nextel really was using Aurther Anderson.

Keep your hardhats on. I'm still waiting for the fallout from Reliant.

Blue - a Hughes I think. Don't remember any red on it.
Definitely not the dinky little Bell 47 they tow around on
a trailer for schools and events.

The extra weight of the two outboard passengers must
have been a load. Once the bird cleared the roof it
sank to just below the roof line and then clawed its
way back up to gain altitude. I'm sure the pilot(s)
appreciated the practice.

My favorite answer which drives most
people nuts is ... "it depends."

In this case it depends upon how the switch was
programmed. If it can't authenticate/authorize the
user (do they have enough minutes on their account)
it might not let the call through.

However, if two subscribers are talking to each other
on the same cell site before the connection back to the
CO is lost, the conversation will most likely be able to
continue. Once someone hangs up and tries to call
back all bets are off.

To answer the question about the number of units on the Active Incidents Screen:

I am a volunteer with HFD and I have been told the webmaster only put 10 on the page to conserve space and load time and that unless there is a something like a 2-11 or bigger there are not usually more that 10 units dispatched and at times there may be a slow period and no large fires for a couple of weeks.

I've had A LOT of problems with IPN, but don't get me started. :-)

I have found what works best is just an informal network of friends who
email each other when something breaks. No mailings lists to delay
messages, just one-to-many emails with the incident and frequency.

But don't let IPN catch you doing this, they'll yank your account.

John

I've re-posted IPN stuff to this and other lists that I know the IPN guys like Rick White are monitoring. However, the information I re-posted was at least 24 hours old for the purpose of discussions in current events rather than competing with a commercial service. Re-posting live IPN dispatches would be a violation of their terms of service.

I've let my free subscription lapse but IPN's business model does seem a little unrealistic for dispatchers who are expected to provide IPN with an exclusive source of emergency/late breaking news. Their compensation for this is a few perks like subsidized alphanumeric paging but IPN isn't really paying you for that exclusivity. It would make more sense if their model permitted letting the dispatcher report the data to multiple outlets.

If you want to create your own IPN-like service, may I suggest you instead pursue a more "HoustonScan" like service. Post your observations here. You can fully expect the IPN guys will be sponging off any info we provide here (fine by me). If the volume of messages gets excessive we can dedicate a separate list for the live dispatches.

In their defense they are offering a service for little or no cost (or used to be free) to the user. In that kind of low-margin market they have to do something to keep their edge over the competition. Some folks contribute to IPN as dispatchers - they enjoy the status of having dispatcher "IPN123" as their tag line. It's just a shame that they can't contribute alongside the rest of us on the open forums (like this one) without having their status symbol taken away.

I'm not anti-IPN. I just think we can do our own thing right here.

The service that IPN is offering was free at one time, but as predicted they started charging for it, at $4.00 per month that is a fairly heavy price compared to other paging networks around the country. But that's good because the price is where it should be to make a profit as a business.

Having said that, if IPN has the customers they claim they have by looking at each state, they are making a ton of money, especially if they are not rewarding the dispatchers by giving them free dues, and any other perks to keep them working hard for them.

I don't feel IPN has the right to "CENSOR" its dispatchers by kicking them out for being active in these types of groups. But then again that is the way the game is played and why there are many other paging / fire networks around the country,

For those of you guys & gals that have been kicked from IPN or would like to have a local group in Houston, go for it! Competition is healthy! Set up a group here on yahoo or something and the people will come along.

As long as you use something like this, that I am going to post, you should have no problem with posting

*** FAIR USE NOTICE.

This sounds kind of hokey to me. Simply using this statement doesn't sound like a proper universal loophole.

I can compare this to the whole music-mp3s-on-the-internet fiasco.
If you pull info directly off of IPN and redistribute that information, to other non-subscribers, especially automatically on a regular basis, I see a problem with that.

If you hear something yourself and it happens to be on IPN, don't worry about it. You just have to worry about relaying radio traffic according to the ECPA laws.

Information these days is a commodity. It is for sale. You have a choice to pay for it or not. But you can't pay for a CD and burn copies for your friends, legally, right? Software, video tapes, and now apparently music (see Napster); it's all copyrighted material.

The issue, in case it was misunderstood, is not that dispatchers would not be allowed to share their "find" with others if he/she dispatched it on IPN. I think if you dispatched the incident, that you can also share that with whomever you want. There is no exclusive "contract" that a dispatcher may only send his info on IPN. That would be ridiculous, especially since dispatchers aren't paid.

I see no real need to create another group (I'm subscribed to too many email groups on Yahoo as it is) for this purpose. That is one of the reasons I created this list. I suppose if you wanted to create a list exclusively for incidents so it can be used for emailing to pagers or other mobile devices and to cut out the chatter, that would be useful. I would hope folks would still use this list to keep up informed as well.

I hadn't heard any problems with my sending out stuff on this list that I sent out on IPN. But I don't think I ever relayed anything from IPN to this list either. I'm not making any ruling here, this is just how I interpret this "issue".

We were posting events on the Internet and the older Bulletin Boards way before IPN came along. You hear something on a scanner and post it to a group or even dispatch it on a group paging system there is nothing IPN can do about it. You will not be posting their information as long as it is something that you heard yourself. Even better, what can they do about it. NOTHING.

Myles,

I am going to create a new group so that we can keep the chatter down and let only be for interesting dispatches/alerts. I will add the Houston Scan email address so all information is forwarded to your list as well. I think it is a great idea to leave it on your list also. I have not started one of these groups so bear with me on the set up process. I have to go do some work but I will get on it tonight.

From: Erich Burrer
Topic: 2590 Message: 2590

I have attempted to create our widely debated group list for notification of "stuff". If you see something I missed let me know and I will change it. I couldn't think of a very good name for the group so if you have a better one, by all means we will change it. I am using my pager as my email address so I can get the stuff. Myles, when you get a chance I would love to figure out how to forward all of the dispatches to your list.

The subscribe address is houstonareadispatch@yahoogroups.com

If I don't get you subscribed right away it is because I don't know what I am doing but learning (first group to start up).

If you think the idea stinks, then we can scrap it.

Just heard a unit say they were in service from the 3-11 fire on 155.040 MHz (Woodlands FD) PL 100.0
FYI, never saw this dispatched on IPN.

Heard about it from a friend in the Woodlands but I would believe either 155.040, 100.0 (Woodlands Primary), 154.965, 146.2 (Woodlands CH2), or 154.280 (Statewide Fire Mutual Aid)

High and dry here in Pasadena but I see there are some storms near the Woodlands. Could this have been caused by lightning?

Just heard Engine 11-1 sent to a fire alarm in the Woodlands now. No rest for the weary.

Just for the count, Pasadena 1 - Terrorists 0.
We're used to terror over here on a daily basis anyway.
You see what comes out of them smokestacks? Wait 'til you smell it.

Now Woodlands is dispatching a unit to check for a lightning strike somewhere so I guess the possibility of my first question is pretty good.

O_o Smell in Pasadena...Just when it get's cold outside. I live by the Lyondell plant and notice no smell(Besides those plants are in Houston) When it gets hot the smell goes where it belongs.(back north) From 610-Scarborough it stinks...Guess where that it at? Not Pasadena. The Crown Plant/Phillips plants don't let out fart smells. Now Galena Park is a diffrent story. :P

I live in The Woodlands and I heard the dispatch on my scanner after someone told me about the previous apartment fire @ I-45 and Sawdust Rd.

Most of the WFD units had just gotten into their respective stations when the call was dispatched. The Chief immediately called for a 2-11 and told the first incoming unit that if there was any fire showing to call for the 3-11.

By the time I got to the area, the structure was fully involved and they had unites coming from all over the area to help. I kinda doubt that the structure was hit by lightening, beacuse the storms were still a ways when the call came in

They sounded the emergency evac tone & horns about 10 minutes after I arrived.

Pretty amazing to have 2 big fires in The Woodlands in one day! Hoping for a little more sedate day tomorrow!

First, some of you may get this more than once since you're in more than one list-serve so my appologies for duplicates.

Second, I want to compile a list of all nets that serve the S/E Texas area, primarily focusing on the Greater Houston Area. That includes all surrounding counties as well. These should be nets directed towards ARES / RACES / SKYWARN / Etc Club nets that deal will these organizations and plus provide communications for public service events are welcome. No swap nets or the like please. This includes HF as well as V/UHF bands.

I will post all nets on my web-site at this URL, I already have a couple there so you can see the format

http://www.ka5cvh.com/nets.html

Please send you net info to me @ ka5cvh@... with the following info

Day of Week, Time of Day (AM/PM), Freq / Tone, Sponsor. and any notes.

I would also appreciate you fowarding this on to other reflectors / clubs / etc if you see the need. However, lets not get one of those AOL things going, you know, "Forward this to everyone you know" ... OK!

Scott,

I am not quite sure if you are addressing the question to me specifically, but nonetheless, the apartment complex in question is about ½ mile west of where Sawdust Rd. turns into Grogan□s Mill.

The first set of apartments is called Woodridge Park and then the ones that burned are called Timbermill.

Anyways, in talking to several people around the area today, it sounds like the fire at the Palmer Course was not the actual clubhouse but possibly a support structure that housed the golf carts.

Hope that helps!

Happy Scanning!

being in the military and hearing it said many times over, it's cases such as this that prove training exercises should be re-evaluated. the saying is "we fight the way we train." however, yes we may have to fight one day in the middle of a severe storm, but when it comes to training i think safety should always come first. :o)

Does anyone know a good free weather advisory service that can send warnings/watches to a pager/phone that covers the Houston area?
I used to use KHOU Weatherwarn but it seems to have gone away. They were very timely, sometimes sending out a watch or warning before I heard it on NOAA Weather Radio.
I am trying out Channel 2's now but I wanted to try subscribing to several at once and seeing who I got first on a regular basis.
I don't see one at Channel 13's site.

Myles,
I've been using The Emergency E-Mail Network at www.emergencye.com, its free & they will send alerts to your e-mail, pager, or cell phone. They've been pretty prompt the last few days with all the weather alerts issued in our area. I also had KHOU's alerts disappear-I've sent them an e-mail to see what the problem is.

Dan

Don't know if you'd consider this outside of your scope, but I use a program called InterWarn. It has the capability of emailing/paging you that you fully customize. It also sends crawlers across your computer screen with new alerts (again that you specify). Everything is NWS material - not third party.

I usually don't buy software but felt that this has been well worth my $20 (would've been less but I wanted a CD) and doesn't require a subscription!

They do have a 21 day free trial (and I never found a successful way around those 21 days - hence the purchase!)

They also offer great support! I emailed a question at around 10pm last night and had an answer within two hours!

Anyway, I really like it and find it the most useful of any weather program that I've ever seen!

Also wanted to thank you and the others for the Space Shuttle Freqs earlier this month - I subscribe to the digest and never got back here to thank y'all!

www.interwarn.com

Hope this helps!

i really dont know but i live in montgomery co and the marine patrol
operates off of mcso 2 so you might want to listen to the local pds
down there 159.270,151.415,151 385 are some tpw freqs state wide
the local pds may be on the galveston co trunked system.

My magic 8-ball says "unlikely".
Look for them to stay on VHF for awhile. Future plans may be for them to explore the new 700 MHz spectrum but don't look for that anytime soon.

BTW, the proposed Pasadena tower site at 225 and Underwood is a no-go. Stay tuned for new developments.

I don't see 867.9125 as being an active frequency around here right now.
It used to be one of the frequencies used by the STAR-Net system at the
downtown Houston site.
Could be they are using it again.
I've got lots of lists at my website. The links are at the bottom of every
email on this list. You should have gotten a welcome email that included
the same info when you joined.
Here's a site to help identify freqs you hear or to help you find freqs for
an area. It's the actual FCC database.
Don't have to go to the FCC office and sit at a microfiche machine anymore.

2641. Montgomery Co. Fire freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-07-17 16:40:08 UTC
From: ayanami419
Topic: 2641 Message: 2641

I hope this clears up the confusion as to who dispatches what in Montgomery County. 155.820 pl 107.2 dispatches every fire department in the county except for Conroe and The Woodlands. Whenever there is an incident, they switch to one of several simplex channels. The most common is "Fire 4", which is 154.280. "Fire 3" is each department's old dispatch freq. For example, "Porter 3" would be 154.43 These all use pl 146.2 Don't know about "Fire 2" as they almost never use this. Also try 154.070 and 154.175 for simplex fireground, both pl 146.2.

155.400 MHz with 146.2 Hz tone.
It is linked to the trunk system on talkgroup 02-014

Correction on the frequency to Montgomery Co VFD dispatches-it is
158.820 MHz.

Date: 2002-07-17 17:21:17 UTC
From: Myles Barkman (work)
Topic: 2646 Message: 2646

Last night, I found that quite a few members of the list have not received emails from this list in awhile.
After doing some digging, I found that for whatever reason, the Yahoo server was getting hard bounces on these people and stopped sending emails out to them until their accounts were "reactivated". I went through the entire list of folks that were listed with hard bounces and reactivated their accounts to receive emails again.
Some of these folks may not even have accounts anymore on the username they had listed. Those will be deleted with time.
Others may have problems with their ISPs or servers at work.
Unfortunately, if you are one of these people, the only way you will see this email is in the archives.
If at any time, you wonder if you are missing emails, check the archives and see if emails have been getting through YahooGroups, and just not to you. Also, check the member settings and see if you are listed as having emails bounced.
Go to the members section when you log in to YahooGroups from the web and then select "bouncing" from the options across the screen. See if your username shows up.

I'm not sure if you can see all the details I can as to whether you are being soft bounced, hard bounced, the dates and such.

Guess we just have to remember that on the information highway, you need a bumper sticker that says "stuff happens" and you will find pot holes. I'll try to patch them up as we go.

Myles,

There was an AT&T DSL outage in the west Houston area (Mon 7-15 thru Tue. 7-16). Our DSL was out at work during that time. AT&T confirmed tha outage but I don't know how widespread it was. No e-mail/internet in the area of West Belt & US59. Could be related.

I used to volunteer in La Porte about 2 years ago. We would dispatch like that for bomb threats. May have something to do with all the recent terrorist threats. My dad works there so I'll try to find out more.

Later, Chris--- In HoustonScan@y..., "Mike \(KA5CVH\) Urich" <ka5cvh@h...> wrote:

From: Myles Barkman (home)
Topic: 2651 Message: 2651

Check this out and see if we can start fitting some pieces of the puzzle together.
http://www.clarc.org/~kg5ai/freqs/hou_trunk.html
I have a list of talkgroup labels at the end of the list.
Albeit, it is not a complete list of talkgroup labels, it would definitely fill in a lot of wholes and answer a lot of questions.
Does anyone recognize some of the not-so-obvious talkgroups and can tell me what they are used for, what I would hear on them so I can try to match them up with what I have?

Subject: Fw: [SCPC-FDM,SAT DX] Congress votes to make interception of cell and cordless a felony

What does one do, get out the vaseline (before or after contacting your U.S. Senator and Representative and the White House) or just ACCEPT the monumental, unheard of CONFISCATION of "Freedom of Speech", "Freedom of Association", "Freedom of the Press" and other untold freedoms and rights under the Constitution, amendments thereto and the Bill of Rights? We criticized Germany (and rightfully SO) for their GESTAPO tactics and Russia for about the same tactics IN THE PAST and then have our own revered government do the same to it's own. God bless America forgive us for being such spoiled brats, I guess. How dare them make our toys impotent.

From: vstream_02@webtv.net
Topic: 2653 Message: 2653

Anyone heard of Houston cell carriers being "denied" the right to place a tower in the City cause of the "NIMBYS"? I for one would go with a big sign and encourage them to build it.

Houston city is still a UHF 400 system so you could use almost any if that is all you are going to listen to,
if you are going to go the 800 route my reccomendation is either the Pro 2053 or the Uniden 780 both are
computer programmable and easy to work with,i use both and i actualy find that the Pro 2053 has more features
for my application then the 780. But i find both to have there advantages and minus's. I would not feel that i was
loosing anything if i had to choose between either one of them , but for me i use the pro 2053 more then the 780,
but that is for my application use only.Since you live in the City intermod might be a problem but both have
attenuators to help out, but do your home work and pick the one that suits your needs and expenses.

regards
sandyj

Reliant Stadium - 10 Channel Motorola,UHF,LTR System. Approx 450 Subscriber Units. Site will be on the roof bridge just outside the sliding roof. This should provide coverage for all of the Astrodomain, including the dome, new stadium, and Reliant Center. There will 90% guaranteed handheld coverage inside the facility with possbily one BDA (Bi-directional Amplifier) needed on the lower level. Houston 2 Way sold the system and will be installing sometime after Aug 18, 2002. The contract was just awarded last week.

System Cost Approx $300,000.

Just figured out what I've been listening to on A4-453.950 MHz.
If you've been hearing all this high-angle rescue type ops with rescuing folks from the 6th floor in a stokes basket and setting up an LZ and you can't find anything on the City of Houston active incident page, and you don't see anything on IPN or on the news, and they refer to it as "Braniff command", it is because this is training.
It really fooled my for awhile until I realized that that area just south of Hobby airport is where the training facility for HFD is.
I also did not hear anything on Lifeflight. Very rare to hear lifeflight called in for an HFD incident. I even started listening to A7 to catch some comms.
Sure would be nice for them to say "exercise" or something every once-in-a-while.
I'm labeling A4 as training too now.

The site will be all new narrowband (11K emissions) uhf channels.
The existing UHF for the dome will remain in place.

One of the keys to getting an LTR system to work is that
the home channels be on clean channels. If a home channel can not
send out its directing information. The user will get an out of
range tone from the handheld unit. Houston 2-way is licensing this
system. It should eventially pop-up in the WTB database with a temp
number followed by an STA or CTA. The Houston 2 Way licenses alot of
things is that they hold the the license in their name, Houston 2
Way) and let the company using the system operate under Houston 2-
way's license. Almost like a guard band manager. If the company
wants the license then they will normally purchase them from Houston
2 way at a very steep premium.

Don't label A4 as training it is used daily for fireground activity. If you monitor close enough you will hear units going out of service to the academy for training. Also you will hear companies that normally don't make a lot of calls together training together so they don't strip any one district of all it's equipment.

Subject: [HoustonScan] !!Reliant Stadium Radio System Information!!

Reliant Stadium - 10 Channel Motorola,UHF,LTR System. Approx 450 Subscriber Units. Site will be on the roof bridge just outside the sliding roof. This should provide coverage for all of the Astrodomain, including the dome, new stadium, and Reliant Center. There will 90% guaranteed handheld coverage inside the facility with possbily one BDA (Bi-directional Amplifier) needed on the lower level. Houston 2 Way sold the system and will be installing sometime after Aug 18, 2002. The contract was just awarded last week.

System Cost Approx $300,000.

For the latest information on Houston area scanning see:

No, there are some UHF "T" band assignments in the Houston area. The two airports used to be big users...

A quick check reveils that 489.1375 mHz is WIH987, Pabin Corp in Pasadena.
Have no idea who they are - anyone???

Could possibly be an in-house fire brigade for the chemical plant. If you hear activity again on this freq you should be able to tell if this is an industrial fire dept. If they were fighting a residential fire then they might have been providing mutual aid to a local F.D.

Can you tell us from what part of town you heard this?
There is a community repeater or trunk system in Willis that uses this frequency in addition to Celanese near Red Bluff and Kirby in Pasadena.
I'm voting on the Willis thing since you said you heard "other stuff" and I doubt Celanese would be talking about a house fire.

You are correct! I did not see the Willis license on my CD browse, but a check with the FCC shows;

CHAMPION COMMUNICATIONS SERVICE, INC.
WPMQ230
489.1375, 492.1375 were the only frequencies I could find under this callsign. Transmitters are in Willis...

From: bpckty1
Topic: 2678 Message: 2678

My neighborhood has just been "strafed" by low-flying airplanes and helicoptors. The answer was on 123.0250, helicoptor chat, and the local media news channels (see Myles' lists for frequencies). The mosquito control folks are spraying and the media are making videos for the newscasts. The Mosquito Control trucks are on HC talkgroup 9072.

Stay inside when the crop duster plane(s)arrive. They pass at about 250 feet. And, you can hear them coming from a ways off.

Happy Scanning.

That is a an LTR trunked Radio System in Willis. They might be licensed
for 20 channels there, but they are only using 5 and I do not think that the
freq in question is one of them.

Real doubtful they will do much with those guys. They are all the time on one or another illegal freq. The traffic moves pretty regular across different freqs. There is one that they are almost always on, but I donot remember it now, I know it can be tuned with one of those modified CB's, I have listened at a friend house on his ham eqpt before. On top of the fact it is most probably the shrimpers that he is hearing, kind of hard to nail down a moving target on the water.

From: Joshua Carroll
Topic: 2688 Message: 2688

I listened to the radio traffic on Nassau Bay PD Primary and FD freqs.
The first call came in as a disturbance in the lobby with "no weapons
involved". An argument between husband and wife.

I jokingly said "Some guy got busted screwin' another chick."

When FD arrived (before PD) a unit said "Send Lifeflight NOW!
Someone underneath a vehicle.. still moving.. will advise"
Dispatch confirmed. After that, I heard PD arrive and say
"female in custody".. didn't run her DL or anything.

According to khou.com, it was the first homicide in Nassau Bay since 1981.

It turned out to be my fiancee's orthodontist..

You can catch the entire story on the news websites... they are updated
now with a detailed description by witnesses and employees of the Hilton

From: Joshua Carroll
Topic: 2689 Message: 2689

Just now, Webster FD called dispatched and said they heard gunshots across the street from fire station 2. They saw smoke and raced to the scene to see that it was an acid bomb. They gave a description of a vehicle they saw speeding from the scene (a van). They contacted Harris County Fire Marshall and HPD (happened on their side of the street I guess) and have told dispatch they will public service them.. no more radio..

Lot of crazy crap going on in the Clear Lake area lately.. maybe I should become an IPN dispatcher.

If you have not seen the dispatch room you are missing out. There are four consoles forming a circle. From what I saw I believe that all consoles can do the same job. Anyone care to comment?

CCEMS staff's the comm. center at the 1960/sugar pine location, it is also the CCEMS admin. building. Since I've been there last they had 4 consoles linked together and 3 or 4 reserve consoles for call-taking and dispatcher training. They dispatch their own EMS, and also dispatch Cypress Creek, Klein, Spring, Ponderosa, Champions, Northwest, and I believe Little York FD's. During most days there are 3 dispatchers on duty, two for call-taking and dispatching, and one for reserve during high call-volumes. Hope this gave you an insight into the 1960/sugar pine location.

From: Rick Parrish
Topic: 2709 Message: 2709

This got picked up nationally on some of the more techie oriented news sites.
Questions I have are ...

1. who was the person that set the system up to begin with?
2. who is the person who decided to put this guy before a grand jury.

Why are they trying to shoot the messenger? Smack the person in #1 above and move on!

Man indicted in alleged hacking of county's system

By ROSANNA RUIZ
Copyright 2002 Houston Chronicle

A Houston man who once showed a Harris County official how easy it was for an outsider to access a county computer system was accused by a federal grand jury Wednesday of doing just that.

Stefan Puffer, 33, was indicted on two counts of fraud for allegedly hacking into the county district clerk's wireless computer system that has been taken out of operation because of its vulnerability.

Puffer is accused of accessing the system March 8, costing the county $5,000 to clean up after the alleged breach.

Puffer, a computer security analyst who worked briefly for the county's technology department in 1999, could get five years in prison and a $250,000 fine on each count if he's convicted. Puffer declined to comment Wednesday and referred questions to his attorney, who was not available.

District Clerk Charles Bacarisse said no files were compromised, but the county had to shut down the wireless system about a month after it was set up.

The county, he said, had intended to use the wireless service to connect personal computers used by court clerks at the Civil Courts Building, 301 Fannin, to their network. The old courthouse can no longer sustain more computer lines, he said.

"I'm hopeful we can determine an appropriate way to secure that system well enough to use wireless service," Bacarisse said.

On March 18, Puffer showed a county official and a Chronicle reporter how he was able to use his laptop computer and a $60 to $75 wireless card to tap into the clerk's system.

In a Chronicle article about the demonstration, Puffer said he noticed he could access the county network in early March, when he scanned for weaknesses throughout Houston.

He said he could also access numerous home, government, university and business computer systems.

The article quoted Bacarisse as saying his staff was alerted when someone tried to access the system March 8. He also characterized Puffer's demonstration as a "low-level intrusion" that did no permanent damage.

As for Puffer's March 18 demonstration, Bacarisse said Wednesday, "Normally you secure a contract with an entity before you hack into a system, if that's what you're saying your expertise is."

County Attorney Mike Stafford said he will resume his investigation into whether the security breach was corrected as promptly as county officials learned of it and the origin of a pornographic picture found on the clerk's office server in March.

2710. Wireless system may be vulnerable to hackers

County cuts off computer network

Wireless system may be vulnerable to hackers

By STEVE BREWER
Copyright 2002 Houston Chronicle

Harris County District Clerk Charles Bacarisse shut down a wireless computer network in his office this week after officials found it could be vulnerable to high-tech vandals.

The decision was made Tuesday, after a computer security analyst demonstrated to Steve Jennings, head of the county's Central Technology Department, and the Houston Chronicle how the system could be compromised.

Bacarisse and his staff downplayed the weakness, saying hackers, terrorists or anyone else intending harm would be detected long before they could do any damage or use the system illegally.

Stefan Puffer, a computer security analyst, met with Jennings on Monday and used a laptop computer and a $60 to $75 wireless card to show him how to tap into Bacarisse's system. Puffer said the demonstration showed the county's wireless networks are vulnerable to those with the know-how and the intent to break in.

Bacarisse said their wireless system was being tested at the time and was not in full use, but he ordered a review of the office's wireless-security procedures.

He also questioned Puffer's motives, noting that the analyst was a former employee who quit the office after a short unpleasant tenure, and he criticized Jennings for not pointing out the problem sooner.

Bacarisse was told about the problem Tuesday, a day after Monday's demonstration.

"We're glad we found out about this, and we're very concerned about network security," said Bacarisse. "But my concern was how this was handled."

Jennings said he was concerned that the system could be accessed from the outside and that he wanted to learn more about the problem before alerting Bacarisse.

Leaving the county's wireless systems unprotected from hackers creates a serious potential for vandalism and more serious problems, Jennings said.

Jennings and Puffer said someone gaining access to the county's system could use it as a platform to hack other systems, including those of government agencies and businesses, leaving few traces of who they were.

Such acts are of special concern to security experts since the terrorist attacks of Sept. 11. Puffer and Jennings cited NASA as an example of a nearby federal agency that could be targeted for hacking.

Once tapped into the county system, a hacker could conceivably send e-mails appearing to come from county officials that could not be traced to the true author.

"If you're in electronic systems, there's always a potential for problems if someone has the time, the tools, the talent and the intent," said Jennings, who thinks the county should establish a wireless-technology policy.

Just as worrisome, officials say, is the potential for someone to crash county computers, re-route printers, change, alter or delete records, or post illegal material on a network computer server.

That would interfere with taxpayer services, Jennings said.

Computer publications are full of warnings about the wireless systems' security because they can be compromised so cheaply.

The wireless system used by the county also is popular in homes, and consumers often install them on their own systems without turning on built-in security features.

Anyone with a laptop computer can buy a wireless card, slide it into his or her computer and use software to scan for and capture radio waves linking computers on a wireless system.

The practice, called "wardriving," is easier if the victim has not taken the simple step of activating the security features to encrypt the airwaves.

Essentially, wardrivers use the wireless signals to ride into the computer network, which is what Puffer did to the one being operated by Bacarisse's office.

Officials said the security feature on Bacarisse's network was not enabled because it was only being tested.

Puffer said he noticed he could access the county network in early March, while using his equipment to scan for such weaknesses throughout Houston.

He said he found more than 250 ways into systems at businesses, homes, universities and governments -- something Jennings said proves that the district clerk's office is not alone in its vulnerability.

Bacarisse's staffers said they were planning to use wireless technology to connect court clerks in the old Civil Courts Building at 301 Fannin to their larger computer system, which is separate from the one operated by Jennings' office.

The network had not yet been set up, they said, and neither Puffer nor anyone else could have done any damage.

Bacarisse's staffers have learned that someone tried to access their system as early as March 8. The system also alerted them to an intrusion Monday, the day Puffer did his demonstration. But if Puffer had tried to alter any programs, they said, security safeguards and software would have blocked him and alerted them immediately.

Bacarisse said Puffer's demonstration was a "low-level intrusion" and he and his staff equated it to stumbling around a dark house, knocking over furniture.

But because the county's main system and the independent one run by Bacarisse are connected, Puffer was able to show Jennings that he could get information about the county computer network.

That worried Jennings enough that he ordered his staff to tighten security between the two systems. He also has plans to spend as much as $40,000 for other security enhancements.

Bacarisse said his staff found a pornographic picture on one of its servers Tuesday that he suspected was planted by Puffer. He said he would refer the incident to the District Attorney's Office.

Puffer, who conceded that he quit his job with the district clerk's office after a short and stormy tenure, denied installing the picture. He said he could prove he had nothing to do with it and welcomed any investigation.

Bacarisse accused Jennings of giving Puffer information to help him access the system and hinted that Jennings was trying to use the demonstration to increase his authority over systems that he didn't control.

Jennings and Puffer vehemently denied that.

I am getting ready to upgrade to a new scanner. I'm looking at the Bearcat780 but have a few questions that I hope someone out there can answer. Is it possible to scan the trunk frequencies at the same time
as scanner single freqs? In other words....can I scan the Deer Park &
Pasadena trunk system and still scan Ellington Field? Thanks for any suggestions and help! Hobbiecat

On the bc780, yes you can scan trunk and non trunk at the same time. Or you can scan two different trunks at the same time.

Okay, I've never had a scanner other than a RadioShack model...
Am I missing out by not getting a BC?

Also, is it programmable thru the same cable like the RS-Pro92-93 is?

This is why I enjoy this board....great information when you need it.

Does anyone know anywhere in Houston that sells the BC? I can get it
over the net and not pay tax but I'd like to purchase locally.
Thanks
again for the help. hc

2720. LifeFlight Frequencies

From: samjbfan
Topic: 2720 Message: 2720

I live in Montgomery Co. just outside of Conroe by the lake.
Recently got a BC245XLT after discovering the frustrations of TRUNK tracking on a Bearcat SC150B.
I was wanting to find some information on frequencies that life flight uses when they come up here. They seem to come up here alot.
Thanks in advance for your help.

Sam

check out this site and decide for your self
http://www.blackbagofsoftware.com/bc780xlt.net/awh780.htm
i have scancat gold software for my 780
they have several different ones though, you can upload and download
freqs using a computer iam really satisfied with mine. its called
remote (PC CONTROL) mode. it uses a RS232C straight face cable.

From: bpckty1
Topic: 2733 Message: 2738

A couple of months ago, one of the local TV stations did a story about the building. It was very poorly designed and built, leaks are everywhere, rooms built for vaults could be accessed easily from the outside, a steel beam went through a window (the pane had to be specially constructed for the configuration instead of hiding the beam in a wall), and this window was in the Regional Commander's office area.

The DPS spokesman said that because of the unique needs for the department: communications security, vaults for narcotics and other evidence, etc., these special requirements demanded special grades of concrete, steel, and electronics. Thus, the slower than the normal, commercial, construction speeds. But, unfortunately, the contractor had some problems.

Ah, yes, our tax dollars at work, by the low bidder.

Oops, sorry, but, my comments, my computer, my time, and unfortuantely, everyone's tax dollars.

Happy Scanning...

Rusty and all,
PLEASE donot use HTML when posting....Yahoo tends to put the ads
RIGHT under your text....Rusty's last msg was totally unreadable
because of that...

Net etiquette calls for PLAIN text on mail list...not everyone
can read (or wants to) HTML formatted text...

Just an FYI.....

Thanks

Ahhh yes...good old Microsoft Outlook! :)
I have been bit by it before myself!.....I like it but hate
it at the same time....(especially since virus writers just LOVE to
work with its address book :) At my office we are using Groupwise..
(thats another love/hate one) but I dont have control over the email..
just the Novell network, the phone system, and the AM & FM xmtrs :)

You can special order from your local radio shack store, prepaid they
come from gre.

2756. Super Target Freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-07 02:18:13 UTC
From: Myles Barkman (home)
Topic: 2756 Message: 2756

Looks like I'm seeing a trend in the licensed freqs for Super Targets in the country.
The four common freqs I see are:
461.0375
462.9125
466.2875
469.4875

I can verify use of 461.0375 as Channel 1 and 466.2875 as Channel 2 for the one in Pasadena.
Don't know how many channels their radios have.
Perhaps the other two freqs listed are available in case of interference issues on a store-to-store basis.
See what your nearby store is using and report your findings.

2759. [HoustonScan] NFL helmet radios

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-07 17:09:55 UTC
From: Chris Parris
Topic: 2757 Message: 2759

The quarterback radios are on various UHF business frequencies betweem 461.0125 and 464.9875 mHz. Last time I listened for them, they were using a rolling code inversion scrambling system, so you won't be able to listen in, but when you find the frequency they are using, you will know it. The system is actually a low-power repeater up in the press-level of the stadium, and according to the NFL rules on these things, is only operational for a period of time prior to the play start. I have seen the operators up in the booth with the repeaters, and they have a timer button that cuts off the repeater after the allotted time is up.

The repeaters are in travel cases and move with the teams. I assume (but haven't confirmed this) that the NFL cleared these frequencies for the season at all the NFL games.

I will be at the Seahawks game this weekend and will see what I can hear...

Chris Parris

2760. transmitters in football helmets

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-07 18:14:26 UTC
From: radiobiged
Topic: 2760 Message: 2760

the helmets have two speakers attached ti each earhole, the coaches messages are first sent to a reciever, wich ENCRYPTS the messages before sending them to the QB. this prevents any illegal interceptions no pun intended ha by the other taem or any body else trying to listen in on the conversation, so freqs would be mute anyway.

A few months ago, the HBO NFL program showed how the system works. It is very interesting. Actually, a "double encryption system", with NFL officials with timers that will automatically cut the coaches off at a pre-determined time.

Maybe they will repeat the segment this season...

Happy Scanning...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-08 00:35:02 UTC
From: Joshua Carroll
Topic: 2768 Message: 2768

I'm scan at work in Deer Park. I currently scan the neighboring cities like La Porte, Seabrook, CLEMC, the CIMA channels, HPD Southeast.

On the Harris County Baytown Site, I scan Webster (just get the primary channels, probably because their nearest the Alvin Site), Port of Houston, and Pct. 8.

On Pasadena, I scan Deer Park, Pasadena, and South Houston.

Is there anything else close to the area I might be missing, for instance should I be scanning another Pct other than 8? Not sure what it is.. would it be Pct 2?

From: Joshua Carroll
Topic: 2769 Message: 2769

Why can I get the Galveston County trunk with decent reception in Deer Park, but in Webster, where I live, it isn't that good... would it be the fact that I live on the bottom of a two story complex? I have a Pro-2053 base scanner with an antenna added to it, close to the window.

From: hobbiecatt
Topic: 2776 Message: 2776

OK....so I'm no genious! For the BC780. I'm lost on the instructions for loading the trunk system for Pasadena/Deer Park. I have the 12 freqs in the same bank per instructions. NOW is where I get lost. When I hit the scan button...nothing happens. If I manually go through the freqs....I will occasionally find something. Also...is there anyway to just program the group #? In other words...do I have to listen to the sanitation dept all of time? 8*) thanks again hc

radiobiged wrote:
lockout all banks except the trunked bank you have programed. hit
menu use up & down buttons to get to #3 witch is trunk data, press
enter 3 times then use up & down keys to get to 1 witch is 800
typeII ,press enter hit menu 3 times. in manual mode step to the
first freq in the bank, press and hold the trunk button untill you
see an M appear above the freq,do this to each freq, then press
scan, then hit the trunk button it should trunk track. you can put
ids anywhere you want to in the scan lists.

Just an answer to an earlier question, and, who knows, the equipment just might momentarily malfunction, and you, or possibly Chris, may receive a, although brief, treat at your next NFL game.

Happy Scanning

we will have to wait untill some one has gone to a game and found out for sure. but if you do a little research on the web they have info on the systems. if they are not encrypted that means that the other team can hear them as well, would that make sense not to have some security feature, iam pretty sure you will not be able to here the coach talking to the qb. out

THE DIGITIAL AGE

Motorola became the official Wireless Communications Sponsor in 1999, designing headsets to withstand the physical abuse while delivering clear communication. The 12-oz. state-of-the-art headset has redefined strength and toughness, combined with comfort for every team in the league.

Today's headset is easily transformed into single or dual cup versions, as well as left or right ear configurations. The headset microphone is connected by a patented TPE Santoprene, which allows for easy positioning of the microphone (gooseneck movement), for each unique, individual coach's head. The Santoprene material also allows the Boom (the most abused, grabbed at, pulled and yanked at component of the headset) to withstand the three-hour plus intense abuse by the NFL coaching staff.

The new Motorola headsets were put through the "Ditka test" to see whether or not they could withstand being slammed to the ground, while keeping parts from flying off or failing to function. Although the new lightweight Motorola headsets allowed the coach to build more arm speed as they spiked it to the turf, this new state-of-the-art headset passed the abuse test unscathed. Telex and Motorola provide the coaches communication system to the NFL

In early 1999's, the NFL instituted instant replay. An earlier attempt had failed because the referee on the field stopped the action and turned the decision over to officials in the booth. As the referee waited for word in his earpiece, the stadium would replay it on the big screen. The referee stood alone in the middle of the field revealing the findings of the referees in the booth. In many cases, the officials took too much time to make a decision, which infuriated the crowd and the coaches. These delays would often times stall a big drive that could decide the outcome of the game.

In 1999, the league once again returned to the past when they reinstated instant replay. But this time, Motorola technology was provided using a new communications configuration, resulting in a more productive system. Each coach is now armed with the Motorola HT750 Radio, which has been modified to have paging encoding capabilities that communicates with the referee's Motorola LS350 pager notifying him of a challenge. The pager instantly vibrates and reads "home" or "visitor" informing the referee which team wants to review the play.

"Pagers used to be strictly business or personal," commented Tampa Bay Buccaneers' Head Coach Tony Dungy. "But we as coaches are now starting to see the benefits of the technology."

Once the play clock is stopped, the referee goes to a draped monitor on the sidelines where he reviews the plays in a variety of angles. Unlike their first adventure in replay, the referee is the one making the decision on the field.

So while team owners continue to build stadiums designed to increase home field advantage, Motorola continues to provide the league with products that level the playing field.

communication between players, coaches, and officials

Imagine this: You are a coach standing on the sidelines here on Superbowl Sunday. The crowd packed around you exceeds the population of many cities--and most of the fans are yelling and cheering at the top of their lungs.

You need to yell some instructions to the quarterback. Good luck.

This is the sort of situation that led Cincinnati coach Paul Brown to devise helmet radios for quarterbacks during the 1950s. Wireless technology has come a long way since then. It has integrated itself into professional football in a manner that improves communication between coaches, players and referees without detracting from the game's tradition.

When the Baltimore Ravens and the New York Giants face off at Super Bowl XXXV this Sunday, the players, the coaches, and millions of fans will benefit from the seamless integration of traditional football and the latest wireless communication technology. Wireless technology will improve communication between coaches and their quarterbacks. It will speed coaches' requests for replays in the cases of disputed calls while it decreases the potential for miscommunications between coaches, players and officials.

On Sunday, the lion's share of wireless technology at Super Bowl XXXV will be provided by Motorola, which as been the official wireless communications sponsor for the 32 teams in the National Football League since 1999. Among the most important innovations are wireless receivers that are built into the quarterback's helmets.

Despite the glamour of the Superbowl, most of the equipment that will be used by coaches and referees will be adaptations of the same products that are available on the consumer market today, according to Dave Weisz, director of Global Sports and Events Marketing at Motorola. For example, the coaches transmit encrypted instructions to quarterbacks using Motorola's GP350 radios, which are often used by police, airport security, plus construction and hospitality businesses. Coaches will also have HT750 radios for sending messages referees and to request instant replays of disputed calls. Referees will receive messages, such as a coach's challenge to a call, via Motorola LS350 pagers.

"An event this big couldn't be done without wireless communications," Weisz says. Weisz estimates that between the teams, the NFL officials, the stadium personnel and the media, there will be more than 1,000 Motorola pagers, radios and cell phones used to produce this event. And the interesting thing

is, most fans will enjoy the game from their seats or from their living rooms without even noticing the technology.

Parallel Evolution

Just as wireless communications gradually became an integral fact of life for businesses and consumers, the NFL gradually adopted this technology for its players, coaches and staff. Prior to the NFL's wireless era, coaches would use time outs to provide instructions to quarterbacks during a game. They also had the option of yelling instructions to quarterbacks, but those instructions could be heard by members of both teams--if they could be heard at all above the crowds.

Helmet radios that NFL quarterbacks use today can trace their ancestry to the 1950s, when Cleveland coach Paul Brown developed a helmet receiver. The wireless era for the NFL accelerated during the late 1970s, when the league allowed coaches to use headsets that enabled them to move up and down the sidelines as they communicated with players. By the mid-1980s, the NFL began experimenting with a totally wireless helmet receiver system that allowed coaches to provide one-way instructions to quarterbacks. In 1985, the NFL allowed coaches to use this sideline-to-helmet system in pre-season games; in 1994, it was allowed for the entire season.

Today, players and fans benefit from more accurate communication between coaches and quarterbacks. Delays in the games are minimized as communications between coaches and referees are sped up. For example, a coach can request an instant replay simply by pushing a button on an HT750 radio. "It expedites the game," Weisz says. "Anytime you can expedite the game, the players and fans benefit. Wireless technology enhances the team's capabilities to perform at an even greater level. A lot of information is being shared between the coaches box to the field and back and forth."

Future Developments

Wireless developments will continue in professional football, both on and off the field, Weisz predicts. The technology is here today to provide video on wireless handheld devices that would enable coaches to instantly review plays. Fans can order food from a wireless device without leaving their seats.

Unlike the highly competitive business sector, the NFL's integration of wireless technology will be adopted in a manner that improves communications without giving one team an edge over another--and without detracting from the game itself. According to Weisz, the important issue is that wireless communication be adopted in a way that fans can enjoy the game without even noticing the technology. For more information about the NFL and Superbowl XXXV, visit: www.nfl.com. More information about Motorola products is available at: www.motorola.com

2784. Office Max and FRS Radios

Yahoo group: HoustonScan (1999 — 2002)

From: dannyrbarnes
Topic: 2784 Message: 2784

This afternoon I went to the Office Max at Fairmont Pky. @ East Sam Houston Tollway (Beltway 8) to get an IDE cable for a hard drive. As I got in the store a salesman came up and ask could he help me. I told him what I needed and he spoke into a lapel mic and all of a sudden two other salesman came up and was speaking to each other as close as 3 feet apart. The store manager ordered FRS radios for each employee and they were having a field day. They use ch 6, I ask how far they were able to talk in the store and one said he had walked to Barnes & Noble and could hear the store, but no one could hear him. They sell FRS radios, but these were ordered and are not models the store sells. They were using Cobra, they sell other cobra models and also other brands.

The virus is a W32.Klez.H@mm

Luckily my Norton alerted me and could not "fix" it, but I deleted it..

W32.Klez.H@mm is a modified variant of the worm W32.Klez.E@mm. This variant is capable of spreading by email and network shares. It is also capable of infecting files.

To read up on it or, if you got it, go to

http://www.sarc.com/avcenter/venc/data/w32.klez.h@...

I was just about to say something about that but I was busy trying to
do my homework before acting on this.
For the time being, I've set this individual to "moderated" although
I believe he may not have even sent the message in the first place.
I'll have to read up on Klez again but it may appear to be from a
certain sender simply because someone else who was infected had his
email address in their address book.
So I don't want to lay blame on anyone but we do want to warn others.
My Norton told me about it as well.
Best offense is a good defense.
Nice thing about Norton AV is that it can scan outgoing emails from
your computer as well. Not that I'm trying to sell Norton products
but this is a nice and E-friendly thing to have.

2792. Re: [HoustonScan] Re: NFL Coaches Radios/ was:transmitters in football helmets

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-12 00:43:08 UTC
From: Chris Parris
Topic: 2792 Message: 2792

First off, let's clarify the fact that there are no transmitters in football helmets - there are receivers...

Second, I have been listening to them since they started in the mid-90's. I end up a quite a few NFL games each season due to my work (television coverage of the game), so I do occasionally have time to break out the scanner and see what I can find.

Third, the transmissions from the coach to the quarterback are scrambled, but maybe not "encrypted" as in a digital signal. They are using a form of inversion scrambling, and you will be able to hear what sounds like Donald Duck sounds, but you will only be able to make out a few words here or there. I have tried using a simple inversion de-scrambler, however the NFL system uses what they call "rolling-code" inversion. That is the center point of the audio-frequency inversion changes during the transmission, so a simple de scrambler won't cut it. I have not found anyone offering a de-scrambler for the rolling code system and I believe they would be against the law these days anyway. The scrambling scheme is not really super-secure (wouldn't be used for law-enforcement or military radios) but works fine for the casual user.

The system uses hand-held radios on the coaches and a small portable repeater up in the press level of the stadium. The encryption is done at the radio on the sideline, so listening to the input frequency of the repeater won't help. So far, all the systems I have heard have had a repeater output between 461.0125 mHz and 464.9875 mHz. They also use a digital pl for the inputs and outputs. I'm guessing, but have not confirmed, that they teams are assigned frequencies at the start of the season and travel the radio equipment and frequency with them.

So why bother to tune these in anyway? Part of it is just the fun of finding out what frequencies they are using. I like "collecting" frequency info when I go to different events and locations. Kind of like collecting porcelain figurines or such - may not be completely useful, but I enjoy doing it anyway...

- I almost forgot, I found the Seattle Seahawks using 464.8625 mHz, dpl 074. I didn't catch what the Indianapolis Colts where using as I was busy during the game and only had a few minutes to play with the radios. So how do I know which team it is? Simple, when you hear the scrambled transmissions, what ever team is on offense, that's them...

Chris Parris

While the NFL may be able to afford scrambling, apparently Pasadena ISD can't. Their coach-to quarterback radio system is totally in the clear, and can be easily monitored from a distance (I live about half a mile from Memorial Stadium and can hear them off a handheld scanner with a rubber duckie). They use the 461-464 MHz set of PISD frequencies found in Myles' list, while school security uses the "repeater offsets" (5 MHz+). BTW, if anyone knows what the school-frequency assignments or PL tones are, I would be greatly interested.

Maybe this happens everyday but I just happened to catch them today.
Sounds like a lot of accidents in the Southwest Freeway/Beltway 8 area now.
Several units out on an accident at Southwest Freeway at Wilcrest. Could be
multiple patients. Action on 460.625 A8.

Earlier, there was an accident at Bissonnet at the Beltway.
There is an accident on the active incident page just to the east of this
location at Bissonnet and Country Creek.

Just heard call for accident on Southwest Freeway at Bissonnet on HPD A7
460.350 MHz.

I think some storm just went through that area. What timing! That area is
a disaster without the extra help.

From: Myles Barkman (home)
Topic: 2797 Message: 2800

Fort Bend has a lot of freqs licensed. Don't know which ones are really
used or for what.
I've listed licensed freqs with the number of transmitters on the license

151.805-57
151.685-30
488.7625 (repeater)-500 used by buses
489.8875 (repeater)-94
489.5875 (repeater)-94
490.0375 (repeater)-400
489.5375-90
490.7125 (repeater)-15
489.0625 (repeater)-30
490.4125 (repeater)-30
490.5375 (repeater)-25
488.3125 (repeater)-50
488.4125 (repeater)-50 used by Maint.

I've only confirmed two of these freqs. If anyone can confirm use of these
freqs by Fort Bend ISD, see if you can figure out what their usage is and
share with the group.

Willis High School Coaches uses Marine Freqs not FRS. They uses old HT220's
With David Clark Headsets. They can be found on 156 to 157 range.
The Willis High School Band Uses VHF Dot Freqs 154.515 and others. They
also uses a wireless PA system on the field called a Long Ranger in 168 to
173 mhz range.

The Coaches have been told to get a new set of radios and freqs. They still
are using the same old equipment.

Jersey Village on 153.950
Yes Still Using, pl 146.2. Wants nothing to do with 800, due to interoperablility.

Is Tomball still using 153.950
Yes Still using for now PL 192.8. The repeater is in the works and will go up soon.

Is Champions area still using 453.375?
Yes, They are "Sharing" the channel under contract with Klein FD.
The 2 departments have a good working relationship and I look for them to stay for a long time.
Chris Blankenheim, you could comment further on this I believe?

After several observations of Digital Testing, the OCU units will start getting Astro Digital Units in the field. XTS series radios and Astro Digital Spectra's. The new versions of Trunktrackers with the Apco 25 cards will be able to monitor those communications, unless those units are using encryption.

APCO 25 is not encryption.

I've also seen some Precinct 5 officers with XTS 5000s. The main complaint is that they are heavier than the STX and MTS 2000 radios, will not accept the "button" swivel clip since the radio's weight will cause the battery connector to crack. Thus, they must use either the large belt clip or the leather holster. This makes easy access to channel changing difficult, especially in "hurry-up" situations.

Happy(?) Scanning

I will also add that anything heavier on a duty belt would not make one any happier either. Sometimes I'll be out in the field with several radios and I keep having to tighten the belt to keep the BDUs up. Guess that means I have no "ass". If I could just move some of the belly to the "rear"...

Right now, my main project is to keep all my rechargeables charged and my back-up systems charged with all this foul weather.

Now if I only had one of those amphibious "Ducks" like they have in Galveston for the tours...

Don't know how long this has been going on but I'm hearing Fort Bend County talkgroups coming through the downtown STAR-Net site.
Just about every 2xxx-4xxx numbered talkgroup is going to belong to Fort Bend County.
I've heard 2256 and 2864 so far.
Don't know if the original Fort Bend system is still in place or if the new freqs are being used.
This one is out of my range. At least I can hear them through the downtown site now.

Not that anyone listens to these freqs, but I've heard that KHOU is using speech inversion scrambling on their ENG repeater on 450.5125 with PL 127.3. Don't know if this has always been an option and they just decided to use it or if it is new.
Be sure NOT to listen to these ENG (Electronic News Gathering) and RPU (Remote Pick-up) freqs in the 161.640-161.760 and 450 & 455 MHz bands. They are considered off limits to scanning folks such as ourselves much like cell phone and cordless phone freqs.

Any inference to these frequencies and the scanning hobby is purely coincidental. For entertainment purposes only. Blah, blah blah.

Looks like FBCSO reprogrammed their radios to work on the STAR-Net system.
After hearing some talk on their TAC-1, some units said they were
affiliating on Alvin, some on Houston (downtown) and some on Clodine.
Didn't hear of anyone speak of a Richmond site.
I'm confirming all sorts of talkgroups now that I can hear them on the
downtown site.
One guy said something about MDTs not working at this time because they were
tuned to the old system still.

Friendswood ISD is using Friendswood PD's Ch 7 repeater 453.1375 PL 146.2 for Operations at the High School. They are employees of the School District and not Police. Very Interesting....THey also just purchased some 50 UHF Handhelds (EX500 UHF, Motorola) for the staff there.

They also have an unlicensed repeater up at 20ft in the Gym of the High School for the Athletics dept.

In terms of talkgroups, quire a bit of space is still available. On any given system, the available talkgroups range from 16-65508 (001-FFE in hex). However, because of interdepartmental agreement, the talkgroup IDs don't overlap, for the most part (League City). This is done so that various systems can integrate at some point in time, as is the case here. In terms of radio frequencies, space is limited to the number of channels available at the various sites; hence, why every talkgroup on Harris County is no longer carried on the Downtown site.

That explains hearing Fresno FD being dispatched and hearing it on the Clodine site. I was not sure if it was bleedover, or if they were on the HC System. The Clodine site is notorious for bleedover, especially with West I-10 FD and West Harris County EMS. Not their fault, I believe, since the dispatcher is only about three miles from the tower...

FBSO is active on Downtown and Clodine. It is a bit strange to hear them here and not have to try to get them when near Richmond.

Now, when will the Port Neches and Louisiana State Police systems join StarNet so we will be able to follow the action from Houston to the SuperDome when the Texans play the Saints?

2832. RE: [HoustonScan] Fort Bend County Fire on trunk

Yes, I was talking about channel capacity. The stated point of trunking is to reduce the number of frequencies needed in a given area. But, as Harris County adds more and more sites, that advantage is getting lost. Right now, I have the downtown, Clodine, and Alvin sites nestled comfortably in one bank, and I really don't want to commit another bank just for HC. I think this is an example of trunking gone amok.

2833. Deer Park talkgroup update

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-17 00:53:51 UTC
From: Joshua Carroll
Topic: 2833 Message: 2833

Found some new talkgroup info for Deer Park

Updates from talkgroups already on list:
31248 *City of Deer Park - Water/sewer?
31152 *City of Deer Park - Utilities/Water

New findings today:
31216 *City of Deer Park - Inspectors/Permits
31376 *City of Deer Park - school??

(Note: 31248 is listed as Animal Shelter on Myles' list, but heard
conversation about shutting off a meter at the Golf Course.
I don't think Animal Control would do that)

Haven't heard anything on the EMS channels, but they are being dispatched
on fire primary (FD 1). Nothing on the other FD channels, but I guess
nothing serious has happened to warrant to use of those channels.

Haven't heard anything on PD 3, but I talked to an officer and he says
PD 3 and PD 4 (not on the list) are used very rarely, and he says there's
a "TAC-1" that we could not scan and is used for SWAT standoff's and such.
They haven't had to use it yet, so I can't say "oh you think I can't"
It could be the old TAC channel or simplex.

I know I've been slacking off on my search of Galveston County, but
I'm getting a one or two-day-a-week job in Seabrook and will be able
to do some searching.

From: Erich Burrer
Topic: 2834 Message: 2834

If I remember right, the 464.600 is called area wide and it is an interagency channel for an interagency SRT. It consists of SBISD PD, HVPD, MVPD, VFD, etc. I know we have it in our radios at the Village Fire Department but we haven't used it yet. I think the repeater is at Gessner and Emnora. The only problem is, SBISD operations uses it quite often. Plus it is a business channel with a bunch of users on it. I wouldn't rely on it for very dependable comm's.

Erich

Topic: 2837 Message: 2838

Listened to HC Downtown, Clodine, and Ft Bend/Richmond towers last night. Ft Bend users were heard on HC and Clodine. No HC units were heard on the Ft Bend/Richmond site, but, quite possibly could be heard during the work week when HC radios could be passing through Ft Bend County or affilliate with it when they are near the county line. Many Ft Bend radios, obviously, will be near Clodine, and they may be defaulting to the Downtown Houston site.

2841. Not Thunder

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-18 12:50:01 UTC
From: railnet802
Topic: 2841 Message: 2841

Just as I turned on the coffee pot this morning, Channelview VFD was toning out "an unknown type fire, Jacintoport near Beltway 8". Of course, being sunday, it took a few tones to get a response. While unfurling the morning newspaper, I heard what I thought was thunder. I switched on the weather channel to see where todays first thunderstorm was building. The radar showed nothing significant. So, I walked to the front window and saw a curious piece of debris on the driveway that wasn't there a few minutws before when I retrieved thew paper. I went to inspect the debris and it was foil type paper, heavily balckened like from an insulation product. Not too weird since a family of roofers lives down the block. I looked to the sky and saw what at first looked like a heavy rain base of a building thunder boomer. Further inspection revealed no white cumulus above it. Hey, this is smoke! Back inside I started listening closer to the scanner, and sure enough we have a multi-response tank fire at Houston Fuel Oil Terminal.

Listening as I type this, sounds to be under control. Fireboats and ladder trucks on at least four quadrants are keeping the tank walls cool enough to keep from buckling and possibly dumpint the flammable contents into a larger area. Hummmm, my throats getting a little scratchy to. I think I'll relocate.

Sounds pretty busy on CIMA freqs today. I just got up and went into my radio room to hear traffic on all CIMA channels:
488.8875
489.0875
489.1125
Not sure how they are using each channel.
Houston FD on scene A3 453.675.
Channelview on 154.370.
Would like to know what the fireboats are using.
Some ops coordinated on fire mutual aid 154.280.
Look like Houston dispatched units at 6:48 am.
Channelview says call came in at 6:33 am.
Heard a ship in the port say there is just some white smoke visible now (steam?) so this sounds pretty much contained.

That must have been kind of scary. Looks like you are about 3 miles from
the center of HFOTCO.
http://www.hfotco.com/map.htm
It's interesting to see that the winds this morning were very light to calm
and not in a direction that would have carried that stuff your direction
anyway. So that stuff was dumped there from whatever blast there was.

Can you imagine being up in the monument looking that direction when that
happened?

2846. Shell UHF trunk

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-18 22:10:21 UTC
From: Myles Barkman (home)
Topic: 2846 Message: 2846

I can't figure this one out.
I've never had to program a Moto UHF Type II trunked system.
This is what Shell is using.
Freqs:
451.300
451.450 (also used for someone's conventional business repeater locally w/DPL 271)
451.900
451.950
452.050
452.150
452.225
452.250 (control channel today)
452.400
489.8625
490.775
488.4125

The only radio I have that CAN track it is the 780. I can't figure out the base freq (I'm guessing 450.000), spacing freq (I thought it would be 12.5 or 25 kHz), and offset channel (supposed to leave default 380 alone).
I don't have trunker which I see could help me figure this out. See here:
http://home.att.net/~wwhitby/tt_ids.htm
Anyone know how to do this or know common base freqs used in systems like this?
I may need another base freq for the T-band stuff. I'm guessing 470 MHz, maybe 470.0125.

2847. frs and dot and gmrs freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-18 23:34:26 UTC
From: res0b64t
Topic: 2847 Message: 2847

FWIW-
Here's a list of frs, gmrs and dot freqs I've compiled. These are mainly the freqs you'll find pre preprogrammed in those little walkie talkies you can buy just about anywhere now. All of them are short range, couple miles (well except for some of the gmrs stuff). You'll hear kids, families, and etc while at public gathering places as well as apt complex workers, store/restaurant personel, surveyors and so forth. Plug them in and give a listen in your neighborhood.
Enjoy, Sly

Topic: 2847 Message: 2853

I think u got it backwards. 151.700 and 151.760 were not in use (allocated) prior to murs coming out. The vhf business band freqs between 151.625 and 151.955 were spaced 30 kc apart. Then came murs and opened up some freqs in between the normal biz spacing. 154.570 and 154.600 have had dot colors assigned to them for quite some time now. I have not checked the links sent by bpckty1 yet to see if 154.570 and 154.600 is now in the murs list now (will soon).
sly

So far as I know, 151.7 and 151.76 retain their color dot status. 154.57 and 154.6 have been MURS freqs for as long as I have been aware of its existence.

Hey idiot! (ha ha) Handheld radios (the single channel versions) had a small colored "dot" or "star" on the back or bottom to indicate what channel (freq) they were programmed for. It was just a simple way for someone to tell what channel (or freq) the radio was programmed for just by looking at the dot or star. (Kinda like buying locks keyed all the same for your house, you know with the little code #'s on the package?). Most of the freqs are for low power local use. These type of radios would be in use primarly in use by any type of business that needed on site short range commuications. Such as apt complexes, warehouse facilities, motels, department stores, plants, etc.
Its kinda of a term that been fading out over the last few years with the popularity with multi channel units being sold now.
Not sure who first came out with this dot stuff many years ago, Motorola, GE, Ritron or who.

Yes Joshua you are correct about the murs freqs.(and I need to correct my list) Yes PRIOR to MURS 154.570 and 154.600 were considered a dot frequency, green and blue. What I'm wondering is if they still have "dot" status or both dot and murs or just murs now. I also would like to know what designation (if any) 151.700 and 151.760 have. I believe these freqs were opened up at about the same time MURS came about. Anyone know? I might subscribe to that murs yahoo group and poke around some.
Sly

So far as I know, 151.7 and 151.76 retain their color dot status. 154.57 and 154.6 have been MURS freqs for as long as I have been aware of its existence.

This is a cool list, but your MURS freqs are wrong. The correct freqs are 151.82, 151.88, 151.94, 154.57, and 154.6

It seems that there is a hetrodyne between the two simulcast sites for Galveston County.

This would occur when the High Stability Oscillators are out of calibration. You can hear it as a kind-of scratchy noise on top of the voice traffic.

You are setting right under one of the main sites. You would have to travel
out a bit from one site whee coverage is overlapped by both sites.

From: Myles Barkman (home)
Topic: 2859 Message: 2859

Don't know exactly what happened but there is something going on at Hobby
with a Southwest(?) plane.
Ops on HFD A4 453.950.
The city incident page shows a standby and an Alert II dispatched at 8:55
this morning for runway 04.
Alarm level is shown to be 2.
There was some talk about having some covers blocked which makes me believe
there was a fuel spill.
Also lots of talk about EMS units and hazmat units.
Don't know if this incident had to do with an aircraft landing, or even an
aircraft at all.

They just called the scene "fire safe".
Guess this may make the news.

OK, just heard them talk about the "drill" and "simulation".
First I heard them say this.
Wondered why I could not find anything on local news sites.
Sure sounded good.
I heard them mention something about "the crash" so I wondered why it wasn't
an Alert III.

I believe I located the frequencies on the FCC database: They are:
451.8375, 451.8625, 451.8875, 451.9875, 452.3625
I can receive transmissions conventionally, but cannot get either my 780XLT or Pro-92 to trunktrack the system. I am assuming it is a LTR system. Anyone know the specific frequency order? Thanks in advance for the help.

I'm several miles away but I'm hearing activity on 451.9875, 452.3625, and 452.0125 (the last one is on a Houston 2-Way license). It appears to be an LTR, however I cannot get my 780XLT to track it (it won't even display the LTR talkgroup IDs). It may be a MultiNet LTR, in which case I believe the 780XLT cannot track it.

As for multi-net ltr, one of the channels will sound like a silent dead key 24/7. This is the control channel for the multinet system. No scanner can trunk track this type of system but you can listen to it conventionally.
As for "regular" ltr, you should hear an occasional "quick blip" (like someone had clicked their mic) every so often WHILE the repeater is not in use (some newer systems however don't emit this blip). This type is trunk trackable by both the pro-92 and 2067 and the Uniden 780xlt. You can enter the freqs in any order on the 92/2067 but you have to enter the freqs in home channel order for the 780 to trunk track it.
As for the difference in trunk tracking performance between the two, as long it is not a large/busy system the 2067/92 will do fine. If it is a busy system the 780 wins hands down. Why? The 780 will hop straight to the channel where the conversation has resumed just like it does for motorola systems thus missing none of the conversation. The 92/2067 will take off scanning thru all the channels looking for the same id. If its a busy system you'll wind up missing quick replies while the 92/2067 is sampling each active channel for a matching id. It takes about a 1/4 second for the 92/2067 to decode the ltr signal and if it has to do this thru several active channels it could take a several seconds to find the conversation again meanwhile you may have missed a couple replies. Keep in mind too that the ltr id is only transmitted while a user has their radio keyed up. It does not stay up during the repeater "hang time" like moto ids do. So as soon as a user unkeys his radio the conversation could hop to another channel even before the repeater drops out. Here again this is unlike moto systems that will hold the repeater for that user until the repeater drops out.

The others have finally reported in:
868.8500
867.4375

> and, from the Alvin site:
> 866.4625 East/South Harris County units

I am beginning to wonder if this is really Alvin. Comms are from all over Harris County, and the signal is extremely strong to be heard from Alvin on a Pro-92 with a rubber ducky. I suspect that it has been reassigned to the Downtown Houston site.

All the reported Clodine frequencies have now been heard on my Pro-92. For some time, only 5 frequencies were in use, but since Ft Bend is now on line with Starnet, it is a very active site.

The quest continues...

Happy Scanning

Chase on westside and on Citywide. Black male robbed a bank at 14400 Memorial and got away with money and "RAT PACK". At the time no fox unit was up. Ground units were getting a few hits. Fox got airborne and a started getting a signal while over the City of Bellaire. Fox continued on toward the west. Ground unit was getting a strong signal from the rat pack while on Meadowglen west of the beltway. Unit at the bank said that the car was a S-10 Blazer white in color. Ground unit spotted the Blazer and the chase was on. The chase came out of the neighborhood and proceed north on beltway service road to Beechnut. Westbound Beechnut turning left behind the old Kmart to Spice ln. then to Wilcrest. Southbound on Wilcrest for a short distance then a turn to go back north on Wilcrest. Crossed over Beechnut to Bellaire where the blazer tried to turn into the Jack in the Box. Blazer stuck a car and suspect bailed out on foot and run across Bellaire into a Texaco parking lot where he was taken down by officers. Fox, Westside ground units and Pct.5 all involved with the chase. All this started when I went out to get donuts.

Are you sure they're still using LTR? I used to deliver food to that plant frequently, and in February, they had abandoned their Viking II portables in favor of Motorola MTS 2000s that made the trademark "chirp" on keyup. Also, a recent search of 900 from my QTH in Pasadena revealed nothing but Motorola systems. On occasion, I had the chance to converse with plant operators while waiting for my contact to arrive, and they had nothing but contempt for their radio system (this before the portable switch).

From: Joshua Wallace
Topic: 2684 Message: 2883

I heard that too. It was the racers at the Kroger at Spencer and Red Bluff peeling out, slicking their tires, doing donuts, etc. That was the second call; the part about smoke was part of the caller's description. Try listening to PPD Autotheft (6704) when they do this. I heard it referred to as "the Fast and the Furious comes to Pasadena" on there once.
spyderm1978 wrote:heard a wierd transmission over ppd dispatch...
one officer was requesting more units at a scene... and i quote "
need at least one more unit out here, there is so many cars on fire
it looks like the whole parking lot is burning"
havent heard anything over PFD however?
maybe my antenna is messed up

Call for volunteers---

Got this info from someone who wanted me to pass it on and try to get some help for this event.
---------(begin)--------
Well, its that time of year again guys. Ole W5DNE is looking for amateur radio volunteers for the airshow again. The dates are October 25(for the special show on Friday) October 26 & 27 for the regular show. If you can make it, either return me an email to: bbtcar@...

or call me on the phone at
281-338-2918 or at work 281-483-4552. I will give details to you later,

but they haven't changed hardly any since last year with exception that the Air Force thunderbirds will be here (check out
http:/www.wingsoverhouston.com). If you know of
any other hams that want to volunteer, just pass my phone number or email address on to them. Thanks & 73'3 Bill Terrell, W5DNE

From: Joshua Wallace
Topic: 2876 Message: 2889

One more thing I forgot to add. In the guard shack at the main personnel gate (actually an enclosed room built like a bomb shelter) is a bulletin board inside a locked glass case with ALL their frequencies and FCC licenses posted on it, including their microwave point-to-point stuff, their VHF fire mutual aid license, and their old T-band freqs. I asked one of the guards to unlock it and let me copy down the freqs once and he wouldn't do it, even though they were in plain view. And this before 9/11.
Joshua Wallace wrote:
Are you sure they're still using LTR? I used to deliver food to that plant frequently, and in February, they had abandoned their Viking II portables in favor of Motorola MTS 2000s that made the trademark "chirp" on keyup. Also, a recent search of 900 from my QTH in Pasadena revealed nothing but Motorola systems. On occasion, I had the chance to converse with plant operators while waiting for my contact to arrive, and they had nothing but contempt for their radio system (this before the portable switch).

I'm thinking of buying a battery reconditioner like the Maha MH-C777 Plus
(or Plus II).
http://www.mahaenergy.com/products/prosumer/mhc777plus.htm

Does anyone have any experience with this product?
I've seen some good reviews and some bad reviews.

I have several Motorola batteries and Kenwood that are in abused shape and I
really like the reconditioning and analyzing features of this charger.

I also like the versatility as far as being able to accommodate different
battery types, sizes and voltages.

I wonder about the charging rate, though, as I see it is around 800 (or 650
depending on who you believe) mAH. They say that since the unit temperature
senses, the heat issue is not a problem.
Comments?

Sounds like Nassau Bay FD is doing some training on 154.205 MHz.
Scenario is a hazmat incident with some type of chlorine.
They have set up a decontamination zone, have medics in SCBA gear, and removed the "patient".
Have not heard any reference to street names and nothing on PD freq. Also, no mutual aid heard which I would expect with something this big so it sounds like training.

Liberty County now has a "north dispatch" frequency. You may hear some signal testing here in the next few days. The repeater site is 300 ft. AGL, atop Davis Hill, rural Liberty County, just east of Cleveland.

Transmit 155.010 / 82.5hz
Receive 156.150 / 82.5hz

The old frequency will remain the same for "south dispatch":

Transmit 155.835 / 146.2hz
Receive 155.055 / 146.2hz

2903. Super Yagi Antenna

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-29 14:32:31 UTC
From: Dwayne Jones
Topic: 2903 Message: 2903

Myles said to go ahead and post this.
It is long but parts are funny.
Dwayne

Being a truck driver gives one a lot of time to think about important
economic and political world issues
Well, I got to thinking about what could be done to make a more
efficient mobile antenna and realized that size is THE problem. How do

you get a multiple figure gain antenna on a truck? Loading coils are
the
answer and the problem at the same time -- the antenna radiation
resistance drops as reactance is substituted for length. High current
loops develop and the power is dissipated in the antenna instead of
being radiated. If only the antenna didn't dissipate the power.
Hmmm....let's see, P=E2 /R; now if R were 0 then...

From my work, I have some contacts in research groups over at MIT in
Boston. Better yet, I knew a Japanese CB'er that is a graduate student
there. The thought running through my head was to build a
super-conducting antenna. This requires cryogenics, i.e. temperatures
around minus 279 degrees Centigrade. I was able get a couple of the
electronics major outcasts interested in the project and we built a
11-meter dipole test silicon wafer. They put together a lot of serial
coils by "re-work" on the wafer; they were able to connect them so we
had a super-conducting yagi. I took my RCI 2950 transceiver down to the

lab for the first tests, but before we could test it, actual
measurements showed it was resonant on 3.126 MHz. It seems that the
normal equations for inductance don't work with super-conducting
materials -- you need a lot fewer turns to get the same results
compared
to room temperature.
Many measurements and trials later, we had a eleven-meter resonant
wafer. This time we put a 40-element beam on each wafer and stacked 4
wafers in the same assembly. That made a 160-element array on 11-meters

in less than a half-foot cube (15 cm3).

The first test didn't go too well. I connected my 2950 to the
super-conducting wafer antenna and tuned it for 11 meters. At room
temperature, we couldn't hear anything. Using a heat pump, the lab
technicians started lowering the antenna's temperature toward the
super-conducting region. I was really impressed by how small the
equipment is, and started thinking it might all fit in the truck. Just
then, the 2950 froze solid, which had a negative effect on its

operating
characteristics. This wouldn't be so easy after all; the coax
connection
would need some study!

They reworked the wafers to put inductive coupling on them, but I
could
find no way to efficiently couple to it from the conducting array.
Fortunately the guys came up with a new ceramic material that passed RF

but not heat/cold. Probably, something that Kyocera invented just for
this use. I sent the 2950 to the Best CB shop in Ontario Ca.(where I
buy
all my equipt.) and asked them to touch it up for me. Frank,one of the
techs there, asked exactly how the paint had been peeled off around
the
coax connector -- lightning maybe? No, I assured him -- just low
temperature exposure, without saying how low the temperatures were. The

project had to stay secret and besides, Doctor Bill can repair
anything!

Since it looked like it might be a while before the 2950 would be
repaired, I brought out my Galaxy 88. I had already placed an order for

a RCI 6900F TB anyway. After verifying that in the super-conducting
range the antenna was resonant on 11-meters, we connected the 88. The
ceramic material worked and the rig operated well as we began the
cooling cycle. The band seemed dead even with the antenna at -150
degrees C. It took another 10 minutes to get to the super-conducting
range -- then the 88 blew up. It seems our antenna had a bit more gain
than the 88 front-end could take.
Later measurements showed 500 volts coming out of the coax. A little
hard to believe, but then what do I know about cryogenic LSI antenna
technology? The 88 was also returned to Dr. Bill, but he frowned a bit

-- the front-end board did look like it had been hit by lightning. Not
to worry, Dr Bill can repair anything!

The 6900F TB arrived just in time to be able to continue experiments.
We built a QSK attenuator to protect the receiver. With the LSI wafer
antenna still inside the lab, we decided to try to make a contact on
11-meters,27.555. What a shock when we got it working! The first thing
we heard was a couple of guys in Phoenix AZ talking on 27.555(Sheriff
Bob and Triple 6) and that was with 80 dB of attenuation. We had the
antenna array on a rotatable mount; I moved it about a half-degree and
the guys in AZ disappeared. What beam width! We tuned them in again,
and
they were just about to sign off, so we thought we would try to work
them.
The rig was tuned up at 150 watts USB on a dummy load; we switched in
the wafer antenna and gave the guys in AZ a call. The noise was

unbelievable -- an ionized ray shot out from the wafers and hit the wall
of the building. Before we knocked a hole in the band, we took a piece
out of the lab wall! Ever wonder what an antenna pattern looks like in
3D? There was a oval hole in the wall of the lab -- about 1-cm high by
2-cm wide.
We cut power quickly. Sheriff Bob came back on frequency a few minutes
later and said he was using his back-up rig; something had taken his
main rig off the air. For some reason, the station he was talking to
never came back, so we decided not to transmit again until we knew for
sure what was going on.
Also this being several months after the test I have found out that
hundreds,maybe even thousands of CB tranceivers were wiped out in a path
from Boston and to the southwest as far away as Austrailia.
Personally I think CB's need more adjacent channel rejection.

As near as we can tell, the antenna array has 620-dB gain over a
dipole, but with a beamwidth of 0.75 degrees using the 60-dB points.
With 150 watts output, the effective radiated power is 55 quadrillion
watts at the center of the beam (5.5 with 13 zeroes).
As soon as the MIT big guys realized what the hell the flash and noise

was on the south campus, the entire project and equiptment was taken
away from us by a jerk named Hollingsworth from the FCC and turned over

to Homeland Defense. CB "tinkering" has contributed to something, but I

am not exactly sure what. I haven't the slightest idea what was in those
wafers or how to build another set. Do you think someone may be
interested in this idea for Star Wars/SDI?? What I'd give to use a much

smaller setup in the next Super Bowl Contest!

A few months later, MIT contacted me and asked just how close I had been
to the antenna when operating. As best as I can figure, I was in the
null behind the array. From what has been said so far, it looks like a
secondary use for our antenna may be as a mass sterilizer and they are
considering useing it in Iraq but confirmation will have to await the
results of our medical tests. If our antenna ever hits the market, it
looks like remote operation may be desirable.So after all this work and

BS we have to come up with some kind of super shielding for mobile use.

As I am writing this, I have been informed that my friend Dr Bill can't

fix everything after all. He's written off the 2950 and 88, and
I just found out that before the FCC confiscated all the equiptment,
the guys tried one more time with my 6900F TB, but without the 100-dB

attenuator to protect the receiver.The guys are recovering in the hospital from what has been guessed to be a freak lightning strike and the 6900 now looks like a pea sized piece of black glass and it looks like it will be a while before I am on the air again.....

Here are a few gems gleaned today while eating lunch at the Antone's at Kirby and OST:

The frequencies in Eric Carlson's Reliant Park list are active, primarily chs 1, 4, 7, 8, 9, and 11. See the link on Myles's list for the info...

Gnu Stuff:

Texans Football Frequencies, update 8-30-02
Frequencies from various postings...

Security Primary 453.0125 D116
Security? 452.0000 D116
Operations 452.0125 D074
Engineering 452.0250 D074
Parking? 452.3625 D043
Loading Dock/Cleaning 451.7250 D023

Not heard 451.3000
451.4500
451.8375
451.8625
451.8875
451.9000
451.9500
451.9625
451.9875
452.1000
452.2125
452.2375
452.3875
452.4375
452.8500
461.1500
461.5000
461.5500

Note: all TEXAN frequencies licenensed by Houston 2 Way/SMG are using DPL. They have not, as far as I have found, using LTR. There are LTR and other PL/DPL users on these frequencies, so, while at the game, if you can set the attenuator on your radio, it will definitely enhance your enjoyment. Also, try the inputs only. It may prove interesting...

2906. Reliant Stadium freqs

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-08-31 00:45:35 UTC
From: Myles Barkman
Topic: 2906 Message: 2906

Here's what I've found so far-all repeaters, unknown use:
451.725 DPL 023
451.9875 DPL 125
452.0125 DPL 074
452.3625 DPL 043
453.0125 DPL 116

I would be suspicious of the 452.000 dpl 116 and 452.025 dpl 074 freqs.
You may have been so close that you picked up some strong images or bleedover.
If you have two receivers, try listening to those other freqs with the same DPL to see if you hear the same thing.

These repeaters are decent in that you can hear them quite aways from the stadium.
I can hear them at the house in Pasadena with no problem.
You can't hear the stuff from Minute Maid Park much outside the Loop.
The traffic on some of the repeaters is very impressive. They go so far as to have a controlled net where you ask someone to go "direct" with another unit.
That's just talking person to person-not simplex.
Sounds like an amateur radio or military net-very professional.

Can't hear much of the older dome freqs.
I can hear 463.300 and 464.3875.

Topic: 2908 Message: 2908

Been a busy evening for Lifeflight tonight.
Two birds were sent to an accident in Pasadena around 5pm at Fairmont and
Jana. Think I saw a news helicopter hovering too.

Deer Park has a major working on 225 east bound at Center Street with Jaws
and they requested Lifeflight.
Ops on 154.220 MHz linked to their 30800 talkgroup on the Pasadena system.
Ground contact for lifeflight will be on fire mutual aid (154.280 MHz,
linked with talkgroup 7888 on Pasadena system).

Looks like Pasadena stopped linking 154.280 MHz to ITAC-2 866.5125 and went
back to using the talkgroup.

Chief unexpectedly leaves department

By John Henderson
The Paris News

Published September 01, 2002

CLARKSVILLE ☐ The police chief here submitted his resignation to city staff
at 5 p.m. Thursday.

The resignation was effective immediately.

Weldon Keith Warren had been on the job less than seven months, having
started in late January. He gave no notice, and he did not give a reason
why he was leaving.

☐He doesn☐t have to give one,☐ Clarksville City Manager Belinda
Peek, said.

The city manager said she stayed at work until 11 p.m. Thursday along with
a stunned police force to get things settled.

Warren left the department in the middle of a murder investigation less
than two weeks old. Officers are still looking for the weapon used in the
Aug. 22 shooting death of a man in a convenience store parking lot. He also
left at a time when the nine-officer police force was already one patrolman
short.

☐I☐m very disappointed in the way things turned out,☐ Peek
said. ☐We had
hoped we☐d got someone who would stay here long term and work with the
community to build the department. And that☐s what he said he
would do.☐

Peek hired Warren, who started Feb. 18 and had 23 years experience in law
enforcement. His experience included four years as a military policeman and

five years as police chief in Kemah, a suburb along the Gulf Coast between
League City and Pasadena.

At a meeting with residents and city staff before he took office in
February, Warren said he was fascinated with the history of Red River
County and promised to do his best to build the community around its police
force.

Attempts to reach Warren on Friday were unsuccessful. Peek said she thought
the former chief had just bought a house north of Clarksville, but she
hadn□t spoken with him since he left.

City staff and officials met at 9:30 p.m. Thursday to assess the situation,
Peek said. Rick Teer, an agent with the Northeast Texas Regional Drug Task
Force, was named interim police chief and started Friday morning. Teer□s
commander released him for two weeks, Peek said.

Clarksville council members were already scheduled to meet at 7 p.m.
Tuesday, and an item about Warren□s resignation will be added to the
agenda, Peek said. City staff issued job advertisements Friday afternoon.

Clarksville□s police force deserves praise for sticking together and doing
their jobs despite the setback, Peek said.

□Everybody is on board,□ she said.

Teer estimated that this was the seventh time he□d been called to be an
interim chief for the department. The latest departure of a Clarksville
police chief comes at one of the most productive times of the year for drug
busts, he said.

□I□ll just see how this all works out,□ he said.

Channelview is working an incident at 15835 Market/Sheldon Keymap 498K on a commercial fire at Channel Taxi.
Have no more info about it except to say they've requested trucks from Pasadena, Cloverleaf, and I think I heard Baytown.
Channelview VFD is on 154.370 MHz but I think with all these departments, they are using 154.280 MHz on scene for most ops.

Was told it is working on Channelview VFD primary on 154.370 MHz or there channel 2 but I don't have the freq for that.

FD's on scene:

Channelview, Pasadena, Cloverleaf, Highlands, & Jacinto City

Ch13 and Ch2 have crews on scene.

I have a Stringer friend (Free lance Photog.) that is on the scene as well.

Said the fire is on the East end of the strip center and they are pushing it west into the building.

Not exactly scanner related but involves RF and public safety.
http://www.zwire.com/site/news.cfm?newsid=5247370&BRD=1579&PAG=461&dept_id=181233&rfi=6
This sounds kind of interesting.
I suppose this is automated so if no one could make a call and they were out in the middle of nowhere, as long as the on-board computer got a phone(?) signal, it should be able to get help.

As long as this thing doesn't give false alarms.

Hi Everybody!

I've started a Yahoo group for Houston Area Fire Buffs:

http://groups.yahoo.com/group/houstonfd/

So if you're interested in sharing photos of Houston area fire apparatus and fire scenes please join! And if you're interested in getting together, touring fire stations this group is for you!

Thanks!
Marvin Suggs

2932. TS Fay

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-06 11:13:32 UTC
From: Myles Barkman
Topic: 2932 Message: 2932

Looks like circulation center on Fay is getting better.
Watch for the eye becoming better defined and closed before tomorrow.
Listen to Galveston County and Brazoria County trunk systems.
Might keep a listen to hurricane hunter freqs if you can find them on the net.
Sorry, got to get to work-to time to look it up now...

2933. Stuff to listen to during the storm

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-06 20:58:01 UTC
From: Joshua Wallace
Topic: 2933 Message: 2933

The following freqs have been used all day for emergency ops:

443.825 pl 103.5 Saltgrass Houston w/ Houston EOC patched in

146.84 Houston EOC

145.41 Galveston County EOC

145.29 pl 167.9 Pasadena EOC, Pasadena Red Cross, TARMA

On the Harris County trunk, I heard Harris County Emergency checking numerous fire departments on Countywide Fire (10992), asking them if they would be on this channel "for the duration of the storm". This might be an inter-departmental link. Also, the Clear Lake Hamfest has been postponed until 11/02. I was asked to pass this on.

2935. storm stuff

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-07 00:59:44 UTC
From: Myles Barkman
Topic: 2935 Message: 2935

Some freqs to listen in on for interesting comms regarding the storm:

159.210 Texas City DPS-units around Galveston County including the island
154.800 Jones Creek PD (not confirmed)
155.895 Clute PD
155.955 Freeport PD
156.090 Lake Jackson PD
158.745 Oyster Creek PD
158.895 Kemah FD
Anything on the Galveston County trunk.
Activity will be picking up on the Reliant Energy trunk.
Already heard Kemah PD reporting some power outages and water coming up on Texas Street.
Tornado Watch now issued for our area until midnight.
Some of the worst of the rain and possibly wind is occurring along the Brazoria County coast.

It's interesting to note the lack of marine radio activity.
Most you hear is on the VTS channels 156.250, 156.550 and 156.600. You can hear some stuff on ship-ship 156.650.

Looks like my primary web page may be down now.
This could be weather related.
Use http://home.earthlink.net/~kg5ai/ as a back-up. Some files may not be up-to-date yet. I'll try to get the major ones fixed.

2936. Weather Site

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-07 03:58:52 UTC
From: celticstorm333
Topic: 2936 Message: 2936

I put together this website because I got tired of going to 10 different websites to get information. It has all of the Houston Radars on one page as well as NWS & other information. It is not a commercial site and everything is probably copyrighted by the sites they are from.

http://www.geocities.com/celticstorm333/

Also, another good hurricane site that I'm not sure y'all are aware of is (this is not mine. I'm in noway affiliated with this gentleman. His site gave me the idea for mine).:

http://www.ih2000.net/ira/bmt-wth.htm

I will add both of these to the Links section also.

Please give me any and all feedback - the email address is at the bottom of each page. I'm just getting started in html so it's probably very boring but I find extremly useful.

Good Luck!

From: jgohio
Topic: 2936 Message: 2938

Celticstorm333,
What a great site. I have a 92 year old mother, other relative and many friends in Houston so it is nice to be able to track the storm without calling them every few hours or going through the programing loop of the whole country on the Weather Channel.
Just a personal opinion: I picked through all the progressive radar loops. On my computer, Channel 13 gave by far the sharpest image, Channel 2 had a nice little close up of some of the heaviest storming in their loop, and the Weather channel 600 mile loop gave some interesting info not evident on the shorter ranges. Specfically, with the storm being a big counter clockwise circle, it looks to me like Houston is in the top of the circle and that the lessening of rain now is the eye of the storm. What's going to happen with the bottom half of the storm?
Also,do each of the TV channels have their own Doppler Radars or do they all take a common feed from National Weather Service and doctor it up to make it look like their own? Does the FCC or some other Gov Agency license radar sites? What frequency range is radar operating in?
Thanks again for your great site.

Hi folks,
i'm fairly new to scanning and I live in the Conroe area. I am using a BC245XLT and having loads of fun. I was wondering if I would be able to receive more signals from the Houston area if I got a scanner like the 780XLT where I can change modes to AM .....
I have installed a discone antenna on my roof and the improvement was not tremendous. Am I possibly just to far away or if I got a different scanner would that help things.

Thanks in advance for the help.

Sam

Sam,
a discone is a unity gain (or ZERO gain) antenna....to pick up 800MHz signals from Houston in Conroe is tough enough for the real 2way systems since pine needles are 800MHz's worst enemy! At UHF and above, the "ground" for radio signals begin at the near field tallest structures...in your case, the tops of the trees around you....To get 800MHz from Houston will require a gain antenna high above ground. If your antenna is below the tops of the trees and surrounded by them, you wont pick up much...You need to get the antenna as HIGH as possible and also use the best lowest loss feedline (NOT RG8 or 58 here) for 800 MHz reception...What side of Conroe are you on? There are some ridges through the area that can help OR hurt you depending on where you are. BTW most 2way is FM or digital...an AM scanner will only help if you want to scan the aircraft VHF band or listen to possible amateur AM on 50 or 29 MHz..a scanner with SSB reception may prove more useful as you can listen to the 220 and 155 MHz ACSSB stuff (if there IS any!) and amateur SSB operations in the 10,6,2,220 and UHF bands, including the amateur satelite stuff.

Topic: 2939 Message: 2946

Hello Sam,

First let me say Welcome to the scanning hobby. I'm glad you are enjoying this wonderful hobby. Now onto your problem, since you are limited by a height restriction I would check into two things, one would be better feed line such as belden 9913 or equiv. and a direcetional antenna, a beam antenna. A beam antenna will offer gain that the discone cannot. This will improve the strength of the signals in the direction that the antenna is pointing. Be aware that this type of antenna will reduce any signal from any other direction by some amount. Beam antenna's really do help, I am a HAM operator and have used many beam antenna in my HAM stations. Check around on line and find the right one for your needs. Have a good day.

Ouch...if I recall that subdivision, it has a ridge to the south of
it as well.....Actually, there are ways to get around the restrictions
thanks to the FCC and a federal law that allows outdoor TV antennas
(wink wink)...just need to get a good antenna that works for both
scanner and TV use like a log periodic or similar and put it in
the vertical polarization mode (this will work since most TV stations
are now using circular instead of horizontal only polarized antennas)

I used to live out in Lake Conroe Forest myself...that side of town
toward the damn is not the best for RF toward Houston....The RG6
is not the feedline you want to use for best 800MHz reception..
you need something lower loss like LMR400 or maybe 9913 or preferably
1/2in Heliax or hardline if possible...also use of an antenna mounted
preamp would be highly useful in your situation..

Let me see what is available that would work for you....the Federal
Preemption on outside TV antennas overrrides subdivision restrcitions
and from your location, trying to pick up off air Houston TV stations
at the high end like 61 or 67 (since they are closest to 800Mhz)
will require a "good outdoor antenna"(just incase the restriction cops
in the neighborhood say anything :)...so if you put something up for TV
and it JUST HAPPENS to work with your scanner as well, nothing they can
do about it :)

And for those wondering this is NOT about PRB-1 which is an amateur
radio antenna preemption...this involves the OverTheAir (OTA) TV
broadcast reception preemption law the FCC passed 3 years ago and
it has been upheld in federal court..it allows those in apts and leased
areas as well as those subdivisions with deed restrictions to erect
TV antennas for outside use (the factor behind this was Digital TV
which uses a lower power level than current analog transmissions and
most DTV are being assigned in the UHF band...even the DTVs of most VHF
stations...some exceptions of course...like KUHT 8 is also on DT-9)

Chris

Amplitude Compandored Single Sideband...

SSB (which is half of an AM signal minus one sideband and the carrier)
using Compression at the xmtr and Expansion audio techniques at the
rcvr to keep the audio at a constant level...this gives the user
the illusion of the signal being like FM....Also a pilot tone at
3.1 kHz (10db down from the main output power level) is used for
freq tracking of the rcvr and tone signaling (PL, etc)....
It was SUPPOSED to be the next generation of 2 way radios....
but the use of it has faltered bigtime...220-222 was taken from the
amateur svc and given to commercial LMR for ACSSB use...the channels
licensed there have almost NO traffic on them...even in Dallas...
I saw several systems on the 950ft Nationsbanc Plaza bldg that had NO
use on them...even during rush tfc times!

Actually, you're looking at about 30' total height AGL, which should be plenty with a good scanner. I can say that comfortably, because the PRO-2067 that's on my wheelchair receives the Harris County downtown site at Hwy. 105 and I-45 with just a 12" rubber duck. For feedline, I recommend 9915. It's low-loss and flexible. Your biggest problem is the BC245XLT. I have one too, and they're notoriously deaf on high UHF. You'd be happier with a newer model.

Hwy 105 at I45 is a better spot for RF than out near Lake Conroe dam..
the ridge that runs south of him cuts across 105 west of I45; so 105/45
location has no blockage to the south...I45 is somewhat a clear path
to the south also (no trees, etc in the immediate area)...he may need
more than 30 ft to get what he needs...it all depends on his local
surroundings and immediate clear zone for RF...)

When I lived out his direction, I could work the 444.3 Houston ham
rptr (which was linked to my 444.8 Conroe rptr) mobile at
I45 and 105 with no problem...out by the dam, no way!

> low-loss and flexible. Your biggest problem is the BC245XLT. I have one too,

True, his rcvr sensitivity will play a big part in what he can hear.
I am not familair with the specs on the 245...of course, I also
recommended a tower mounted preamp....that will always help if done
right.

The 780 is good. Something like a periodic will help IF you're interested in a specific range of frequencies. They aren't for scanning a broad spectrum, tough. Chris raises a good point about a pre-amp, but be careful. Modern scanners are so sensitive that a pre-amp can overload them.

Thanksd for all the responses,
Someone on another group mentioned the Scantennae from scanner warehouse. Still trying to soak in as much info as I can from everyone out there. Whatever I do end up mounting will probably not go any higher than our deed restrictions allow not because of the homeowners association, but the other home owner in this house, ie my wife.....
What kind of antenna mounted preamps are there out there? Where can I get them? Also open to radio recommendations...

Thanks again for all the good information. Also, is their a amatuer radio club in the Conroe area?

Thanks again,
Sam

2956. Reliant Stadium LTR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-08 20:26:13 UTC
From: Eric C. Carlson
Topic: 2956 Message: 2956

The Reliant Stadium LTR is active now. Here is the LCN order I've found:

02 452.0125
03 461.5
04 452.3625
05 453.0125
06 452.4375
07 451.8875
08 451.725
09 451.9875
10 451.8375

The system is very active right now. There are numerous talkgroups.

-Eric

This is controlled from their website. I understand completely the aggravation that it causes when trying to view the loop. This is yet another reason why I have all of the Radar loops linked. If I could have the loops pull to a single site I would but I am not that advanced if it can be done. Ch 11's is also good but very small!

Sorry that it took me so long to answer. I had to work Saturday. I guess your question has already been answered by Mother Nature!

> Also,do each of the TV channels have their own Doppler Radars or
do
> they all take a common feed from National Weather Service and
doctor
> it up to make it look like their own?

To this I don't have a definitive answer. The weather is just a hobby for me and I have no formal training (although I'm looking for a computer job that is somehow involved with the weather). My best guess is KHOU-CBS Ch.11 & HCOEM are NWS feeds, KTRK-ABC probably has there own but it is possible that it maybe AccuWeather and I believe KPRC-NBC might have there own Doppler. This is again my best guess. I've got some emails out to some of the channels that
might
help with this later.

>Does the FCC or some other Gov
> Agency license radar sites? What frequency range is radar
operating
> in?

I don't have a clue as to this. Again I am an amateur who wants his
information as quick as possible. The biggest `high' I get is when
I have information before the media or general public!

I was listening to a scanner in college and heard a Ham reporting a
Funnel Cloud that was near the ground by a kid's baseball park.
Less than two minutes later the Weather Channel had the all so
familiar warning beeps and a crawler going across the screen. I was
hooked! That bled over to my affinity for the news and that is how
I got into scanners - getting the news as it happens and getting the
whole story!

Haven't quite had the opportunity to get the training or the Ham
license yet am hoping to find out about the SkyWarn seminars early
this next year.

I am still looking for a job that will let me combine all three
hobbies (Computers, Weather, Scanners).

Just found this on the web. It pertains to the WSR-88D RADAR like
the one here at NWS Houston/Galveston. While it does not directly
answer any of you questions, it does provide a little more
information.

http://www.srh.noaa.gov/ftproot/lzk/html/techno99a1.htm

There might be someone else in this group who can help. I am new to
this Yahoo Groups thing and don't know where else to find resources
on Scanning or Weather.

One resource that I've found invaluable is a program called
InterWarn. It is available on the net at www.interwarn.com . I'm
not affiliated with this company but know that the tech support is
awesome. Someone else here might be able to recommend a better
program.

Hope this helps. And thanks for the feedback on the sight!

Weathercaster
This a job posting that might shed some information on Ch 13 KTRK-ABC.

From the KTRK Website:

The KTRK -TV is looking for a Weathercaster. Applicants should be familiar with weather computer systems including WSI Weather Producer, Doppler Radar with Vipir, Baron Storm Tracker and other modern weather tools. Candidates must have a good knowledge of weather forecasting, weather patterns and storm coverage, able to present comprehensive, easy to understand weather forecasts and storm coverage on the air in a professional manner. Prior weather experience is preferred. A college degree in meteorology or similar field and an AMS seal are preferred. KTRK prefers to deal only with the applicants, and not third parties. Interested applicants should rush a resume, references, cover letter and non-returnable Beta or VHS resume tape to:

Dave Strickland
News Director
KTRK-TV
3310 Bissonnet
Houston, TX 77005

Yes, the major stations each have a doppler radar
setup.
Although, I do have it under good authority that the
stations still use the NWS information for forcasting
and storm warnings.

73,

Ken, KD5AXG

2961. Re: [HoustonScan] Reliant Stadium LTR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-09 04:34:43 UTC
From: Wayne Gresser
Topic: 2956 Message: 2961

From Galleria area I captured the following talkgroups, not all of the frequencies seem to be at
same power level. 452.9625 seems to be one of the trunk frequencies, what order?

002120
002110 Command
002140 Ops, electrical
002150 Ops, mechanical
003120 VIP services
003130 ticket gate supervisors
003140 Medical teams
003110
004110 Cleaning crews
006130
006110 inside security
006120 outside security
006160 parking services
008170
008180 Suites services ?
008110
008130
008160 Team services
009115 Liquor concessions
009130 Catering
009190
009125
009110 Concessions
009120
009135
009160 Concessions

2962. Re: [HoustonScan] Re: Weather Site

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-09 06:34:15 UTC
From: Steve Nelson
Topic: 2936 Message: 2962

The TV channels in Houston--Channel 13 and Channel 11
use the same site which is in Missouri City(extreme SW
Harris county--30 miles SW of downtown Houston)
Channel 2 uses their own system...they have a doppler
radar on top their tower(white ball similar to the
ones you see from the National Weather Serv.) They can
afford it probably because they own a radio station
also(KPRC950am radio KPRC-TV NBC affiliate)

The National Weather Serv. is located in League
City,TX--45 miles SE of downtown Houston.

No..KPRCTV and KPRC AM are not owned together....Post Newsweek owns
KPRC TV....KPRC AM is owned by Clear (Cheap) Channel..They have been
separate ever since the Hobby family sold them in the late 80s.
KPRCTV can afford it because they want to....so could ABC owned
13 and BELO owned 11...(Belo also owns WFAA TV8 in Dallas and
the Dallas Morning News)

2964. Re: [HoustonScan] need help...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-09 15:22:12 UTC
From: Joshua Wallace
Topic: 2941 Message: 2964

Okay, here's the problem with that. Unlike the rest of Radio Shack's line of scanners, the Pro-2067 and its handheld equivalent, the Pro-92, were made by GRE and not Uniden. Their method of trunktracking is to listen to the subaudible data carried on the voice channels and NOT the control data channel. While this works great for LTR monitoring (it uses the subaudible data in place of a fixed control channel anyway), it doesn't work at all on Motorola and EDACS systems. I don't know how yours is programmed, but if you program in a talkgroup list, it scans all the frequencies you have programmed into that particular system looking for the subaudible data corresponding to each talkgroup, and it does this each time for every talkgroup you have in your list. This leads to enormous lag time, ranging from a few seconds on a Pasadena-sized system to almost a full minute on a STAR-NET-sized system (I timed it). The data decoder doesn't even work that good to begin with. It often fails to recognize talkgroups, displays incorrect IDs, and will display a talkgroup as something it's not. (on the Pasadena trunk, it confuses Rural Metro 2 with PPD Gangs for some reason) My advice: return the Radio Shack scanner and get a Bearcat 780. It trunks off the control channel just like the actual Motorola and EDACS radios do. It also allows for individual talkgroup lockout in trunk search mode, a feature totally absent in the Pro-2067 due to its method of trunktracking. They cost anywhere from $225 used to $375 new, and are somewhat harder to find, but hey, you get what you pay for. I have owned both these scanners as well as programmed them for others, and the 780 trunks better, is less intermod-susceptible, has better side rejection, is more sensitive, and it programs much easier than the Pro-2067.

i live in the south pasadena area, for some reason my new pro-2067
will not pick up with a great degree of reliability anything on the
pasadena trunk system... i hear tons more transmissions on my pro
94... it will pick up houston pd all over the city.. but not any
trunk freq's, including also HCSO or PCT 8? anyone please help me
with this? i know i have them programmed correctly...

Dan Patrick doesn't own KSEV...he is leasing it from Liberman Broadcast
(who owns a number of Spanish stations in town) under a 7 year LMA
(Leased Management Agreement)...If memory serves, he didnt own KPRC(??)
just was one of the main air talents...he DID own KSEV from its startup,
sold it to AMFM, who then spun it to Liberman after their merger
with Clear Channel.

It's a 32k stream. A dial-up wouldn't hack it.

Do you need a T-1 connection to listen to the audio?
I'm only using 56k modem w/dial up.
thanx

As long as the audio is in the clear and not scrambled, etc I don't
think the ECPA laws will have any prohibition against it...
Otherwise, its just him streaming his scanner...and for no profit...

From: Eric C. Carlson
Topic: 2956 Message: 2983

Here's a list of talkgroups I was able to ID.

0-02-110 Commandpost Primary/Supervisors
0-02-140 Central Plant/Engineering/Maintenance
0-03-110 Security - 24-hours
0-03-120 Ushers
0-03-130 Ticket Takers
0-03-140 EMS/First Aid
0-04-110 Cleaning
0-06-110 Event Security - Inside
0-06-120 Event Security - Outside
0-06-160 Parking

The talkgroups on home repeater 09 seemed to all be food and retail concessions-related (Aramark). Talkgroups on home repeater 08 seemed to be VIP and team-related. I haven't had a chance to check 452.9625 (it wasn't on any of the licenses I was checking) but it probably is LCN 01.

2987. Star-Net trunk

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-10 19:51:51 UTC
From: tom22549
Topic: 2987 Message: 2987

I just recently got a Pro-92 scanner and would like to follow some talk groups on the Star-net trunk. I live in the northwest part of Houston and planned to program the downtown and Tomball repeaters. I had a couple of questions.

1. I have seen several different frequency lists which don't agree. Police Call 2002 lists some which don't appear here. The same is true of Trunkscanner.com. Which do you recommend?

2. I had planned to program all of the Harris County trunk frequencies in adjacent banks (since they all won't fit in one). Will this work successfully?

Any guidance you can give would be appreciated.

Tom Fitzgerald

2988. Re: [HoustonScan] Reliant Stadium LTR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-10 23:33:11 UTC
From: Wayne Gresser
Topic: 2956 Message: 2988

Using a Pro-92 tuned to 452.9625 in LTR mode, I was seeing various talkgroups primarily from home
repeater 08, 03 and 06. I could not get my 780 to track this frequency when in the 01 position. It
did trunktrack when I placed it in position 09 and pushed 451.9875 and 451.8375 down one position. In
this order however I did not seem to pick up any activity on 451.8375. Probably the frequency order is
not quite correct, will have to wait until the next event at Reliant to experiment.

Just got back home, No news as to what actually happened. The system came back up and went down again then came up about 30 minutes later.

From what I have been told users on individual sites were able to talk to each other as normal, but if someone was on another site the users could not talk to each other (Site to Site).

Trying to get more info from Central Technology, or the Firemarshall's office but none yet!

If you look at the Harris County STAR-NET list, SO Dispatch 1 (5520) and Precint 4 Constables Dispatch 1 (11376) are used for law enforcement in the northwest Harris County area. Also try Tac North A (14768). The numbered tac channels are used also, but they are countywide. The sheriff's deputies have also been known to use intercity car-to-car (154.950 no PL) for BS communications, and they also have Nextels.

It's the Sears inside Greenspoint Mall. At this time, it appears to be a FALSE 2-alarm fire. I work right down the street, and although there are firefighters on the roof with supply lines, there is no smoke or fire visible at this time. They didn't even evacuate the mall. I was scratching my head on that one, too.

3008. Plant explosion in Clute

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-13 14:39:53 UTC
From: Joshua Wallace
Topic: 3008 Message: 3008

I'm hearing reports of a plant explosion at the BASF plant in Clute in the SH 332 and 288 area. Started with Lake Jackson reporting a power surge followed by an explosion and blackout. Then reports of a cloud forming over the BASF plant. Lake Jackson and Freeport are rolling trucks. Clute was mutual aided by the plant fire department. Lake Jackson is on 453.8375 pl 210.7 and Freeport is on 154.325 pl 146.2. Also try Brazoria Countywide Fire Dispatch on 46.14 no pl. Don't know about Clute, maybe lowband? Will keep everyone posted.

Further updates. They're not talking about any kind of toxic release, but SH 288 has been completely closed off. Freeport Fire was initially turned around, but they're now en route with medics. Can't hear Brazoria Co. Trunk from the QTH in N. Houston. Try the Saltgrass Link system; hams are always a good source of first-hand info. 443.825 pl 103.5 for Houston and 147.34 for Clute? don't have a list in front of me. Lots of conflicting info; one person saying a tank car, another a compressor.

There were 5 or 6 firemen injured, but no one killed. There was an annhydrous ammonia release, shelter-in-place is still in effect, and the band closed up so I can't hear the fire dept's anymore. I have an uncle who works at Chevron-Phillips in Old Ocean and they felt the blast out there.

Band may be opening. I'm hearing some sort of military-sounding comms on 164.225 MHz.
Don't detect any PL on the repeater.
While these people were talking with their "Alpha 2" and "Whiskey 5", it sounded like possibly another repeater keyed up with the same signal and heard similar talk.
Wonder if this is a common freq for some type of base security.
Now I'm hearing something on 164.375 MHz.
Both these freqs are used by NEST (Nuclear Emergency Search Team). Yeah, right!
Someone else listen to this stuff and tell me what this is.

Unrelated, I'm hearing some phone conversation on 467.6875 and the input on 462.6875. Anyone else hear this?

Your phone patch comms on 462.6375 are at the Nova Plant in Bayport. I guess shady radio techs that would set up a phone patch on FRS.

3030. Re: [HoustonScan] Reliant Stadium LTR

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-15 05:16:45 UTC
From: Eric C. Carlson
Topic: 2956 Message: 3030

I've worked on the LCN order some more and I think I've got it mostly figured out. It's easier to work on when it's less active than it is for Texans games. On Saturday it was in use for events at the Dome and at Reliant Center. I suspect the old set of conventional frequencies for Reliant Park is now obsolete.

01 453.0125
02 452.0125
03 461.5
04 452.3625
05
06 452.4375
07 451.8375
08 452.9625
09 451.9875
10 451.725

This LCN order was tracking perfectly for me on Saturday night. The real test will be the next Texans game. As for the hole at LCN 05, I'm guessing this might be 451.8875 or 452.1.

-Eric

3031. HFD Dispatch Audio feed

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-15 14:55:27 UTC
From: Marvin Suggs
Topic: 3031 Message: 3031

Hi Everybody,

I re-configured the HFD Dispatch Audio feed to stream at 6.44 kps instead of 56 kps. I think this will let people with dial-up modems better access the feed. I hope too, that more users will be able to simultaniously listen in. I think before, the server would crash if more than 6 people logged on. So I hope this works better. The audio quality is not as good, but I hope it's a good trade out for less crashes. here's a link to access the feed:

http://groups.yahoo.com/group/houstonfd/

Take care and thanks for your patience!

They call that an index. It is a combination of things like how many crew they have, patients, and fuel.
They have laminated cards that tell them how to figure it out.
Weight is a critical issue for a helicopter.
I think the highest I've heard them go is Lima or Mike. You'll usually hear that after they have refueled.
When you hear Charlie or lower, they must be getting low on fuel.
I forget exactly what it means when they say a letter twice. Think that meant there are two ppl in the front.

"Landing plus..." I think refers to how much time after landing that they came in contact with the patient.

Depending on the severity of the patient, they might land COLD (stop blades) or HOT (don't wait).

Wish we had someone who works with them here that could explain some of this.

I've collected some info over the past 2 weeks:

30384 SWAT 1 - heard some survellience on the Golf Course.
It sounded like two women BSing about "wow, that was almost
a hole in one", etc..

30832 FD 2 - Staging (during drill on 9/5/02)

30896 EMS 1 - Staging (during drill on 9/5/02)
30928 EMS 2 - Talk

30576 EXEC 2 - during 9/5/02 drill, talking about shelter in place,
opening 225,
mointoring sites, EOC??

31248 City 4 - Public Works and Animal Control -
heard references to "the cave"

Some unknows that are known:

30992 Fire Marshal 1 - (heard switch on FD1)
31056 Engineering 2 - Talk (heard switch on 31216 Engineering)

31568 heard references to the barn, diesel to Bayou Bend, and
community center

3035. Re: [HoustonScan] band opening

Last Thursday morning, I heard an interesting piece of DX on UHF. Northwest VFD was having trouble with unauthorized users on their new UHF frequency (453.575 pl 192.8), or so it would seem... The fire cheif got on the channel and talked about their radios not being properly PL'd when the other party came in between transmissions and talked about contacting the "proper authorities" about jamming on "their" frequency. The fire chief then attempted to contact the other party by saying "This is Northwest Volunteer Fire Department, WPKJ433, Houston, Texas, calling whoever's talking on our channel." They responded " Okay Houston, this is the Louisiana State Museum. We're out of New Orleans.. We're gonna see about getting that corrected, um, we'd like for you to work with us on this." The fire cheif then asked for a phone number, which he gave as 504-568-6985. They were both talking back and forth on their respective repeaters, and they were both using the same PL tone. Harris County Emergency, which dispatches Northwest, was unable to hear the DX for some reason. I have it recorded, but alas, no way to play a tape on the computer.
Daines Hornsby wrote:I doubt it, dude. I was talking about a freq on 463 mhz. ----- Original Message ----- From: Mike Palmer To: HoustonScan@yahoogroups.com Sent: Saturday, September 14, 2002 4:49 PMSubject: Re: [HoustonScan] band opening

As Scotty on ST would say,
Capt, YOU canna change Mutha Nature! :)

So much for N.O. and the NWFD getting things "worked out"; all they have to do is wait...it clears itself up after a while (try telling that to DJs who cant understand why they hear a country station on their channel....WELLL DUH when the xmtr you are on is 75 miles the other side of town and the band is open & NO there is nothing WE can do about it....GOD I get tired of saying that every time the band opens up! :)

Non technical / radio folks JUST dont get it!

3039. Star Net Outage Last week

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-17 16:31:15 UTC
From: robcamper
Topic: 3039 Message: 3039

Here is what happened on the Star-net outage.

Their master controller went out and then tried to fail over to the back-up controller. One problem, there was no back-up Controller. The result was total failure of the system.

Next the radio shop had to load a backup file of all Id's and Talkgroups. One problem, the list was not current (like 6 months old) and lots of outdated information and none of the recent talkgroup additions. this lead to partial operation of the system for several days. The SO and the rest of the county have been calling this a major Cluster F>>> on the part of the Radio Shop.

When the media called about the site, they were told that this was a planned outage for upgrading the system. Big fat lie!!!

Next Ft. Bend County

Ft. Bend county was installing a new omnizone controller on their system to allow roaming between Harris County and Ft. Bend county radios. Ft. Bend county did not switch to Harris County. They can now roam on to the system. The Ft. Bend county system had to be taken down while the upgrade happened.

I have heard one side of a phone conversation on a FRS freq I think
that may have the Freq. I did not pay it much attention though. I
have heard them in various places like Conroe, Tomball usally short
range except one time heard one for several miles along FM1488. Maybe
someone is importing a non standard cordless phone? next time I will
have check the other 'pair' for the freq to see the other side is there.

A friend of mine works for Nova Chemical in Bayport and he heard the same thing on FRS ch. 6 full quieting in the vicinity of the plant. He said the transmission ended with a series of DTMF tones which led me to believe it was a phone patch set up by the plant radio techs. He also told me that in their safety orientation, the plant supervisor advised them that, in the event of an injury, not to use actual names or mention the nature of the injury over the radio because "people in the area are listening and we don't want them knowing what's going on until we tell them."

From: Myles Barkman
Topic: 3046 Message: 3046

Just had an armed robbery occur at an Auto Sales business at 2712 Shaver in Pasadena.
Had one victim injured, unknown means.
Two black males wearing ski masks and displaying hand guns ran from the rear of the business on foot.
Now saying they may be have left in SUV.

Ops on PPD-1 talkgroup 6576.

Looks like there was shooting involved.
Several casings found on the ground.
Say there were three suspects and they left in Mercedes SUV-comes back to address in Humble.
Name of business may be Edison Auto Sales.

Reported subject with handgun near area trying to conceal.

Bellaire Fire uses 460.600, and Bellaire PD uses 460.175. PL's on both are 167.9. The fire department works closely with Southside Place FD (154.98 pl 114.8, shared w/ city works) and West University FD (16048 on STAR-NET). In the event of a working fire or other major incident, both Bellaire and West U have the capability to link their fire channels, as well as with Southside Place's fire channel.

3056. neat site at HFD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-20 01:46:39 UTC
From: Myles Barkman
Topic: 3056 Message: 3056

Don't know if this was already mentioned but I found a neat site on HFD that talks about the different apparatus.

3057. If Motorola Sold Paint...

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-20 02:57:21 UTC
From: Rusty Caufield
Topic: 3057 Message: 3057

----- Original Message -----
From: "Chris Bertolini" <kenwood@...>

IF MOTOROLA SOLD PAINT...

Customer: Hi. How much is your paint?
Motorola Salesman: Well, sir, that all depends on quite a lot of things.

Customer: Can you give me a guess? Is there an average price?
Motorola Salesman: Our lowest price is $12 a gallon, and we have 60 different prices
up to $200 a gallon.

Customer: What's the difference in the paint?
Motorola Salesman: Oh, there isn't any difference; it's all the same paint.

Customer: Well, then I'd like some of that $12 paint.
Motorola Salesman: When do you intend to use the paint?

Customer: I want to paint tomorrow. It's my day off.
Motorola Salesman: Sir, the paint for tomorrow is the $200 paint.

Customer: When would I have to paint to get the $12 paint?
Motorola Salesman: You would have to start very late at night in about 3 weeks. But
you will have to agree to start painting before Friday of that week and continue painting until at least Sunday.

Customer: You've got to be kidding!
Motorola Salesman: I'll check and see if we have any paint available.

Customer: You have shelves FULL of paint! I can see it!
Motorola Salesman: But it doesn't mean that we have paint available. We sell only a
certain number of gallons on any given weekend. Oh, and by the way, the price per gallon just went to $16. We don't have any more $12 paint.

Customer: The price went up as we were talking?
Motorola Salesman: Yes, sir. We change the prices and rules hundreds of times a day,
and since you haven't actually walked out of the store with your paint yet, we just decided to change. I suggest you purchase your paint as soon as possible. How many gallons do you want?

Customer: Well, maybe five gallons. Make that six, so I'll have enough.
Motorola Salesman: Oh no, sir, you can't do that. If you buy paint and don't use it,
there are penalties and possible confiscation of the paint you already have.

Customer: WHAT?
Motorola Salesman: We can sell enough paint to do your kitchen, bathroom, hall and
north bedroom, but if you stop painting before you do the bedroom, you will lose your remaining gallons of paint.

Customer: What does it matter whether I use all the paint? I already paid you for it!
Motorola Salesman: We make plans based upon the idea that all our paint is used,
every drop. If you don't, it causes us all sorts of problems.

Customer: This is crazy!! I suppose something terrible happens if I don't keep painting until after Saturday night!
Motorola Salesman: Oh yes! Every gallon you bought automatically becomes the $200 paint.

Customer: But what are all these, "Paint on sale from $10 a liter" signs?
Motorola Salesman: Well that's for our budget paint. It only comes in half-gallons.
One $5 half-gallon will do half a room. The second half-gallon to complete the room is $20. None of the cans have labels, some are empty and there are no refunds, even on the empty cans.

Customer: Forget this! I'll buy what I need somewhere else!
Motorola Salesman: I don't think so, sir. You may be able to buy paint for your
bathroom and bedrooms, and your kitchen and dining room from someone else, but you won't be able to paint your connecting hall and stairway from anyone but us. And I should point out, sir, that if you paint in only one direction, it will be $300 a gallon.

Customer: I thought your most expensive paint was $200!
Motorola Salesman: That's if you paint around the room to the point at which you
started. A hallway is different.

Customer: And if I buy $200 paint for the hall, but only paint in one direction, you'll confiscate the remaining paint.
Motorola Salesman: No, we'll charge you an extra use fee plus the difference on your
next gallon of paint. But I believe you're getting it now, sir.

Customer: You're insane!
Motorola Salesman: Thanks for painting with Motorola.

3058. LIFEFLIGHT QUESTION

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-21 05:36:56 UTC
From: Jerry
Topic: 3032 Message: 3058

Hey Myles,

I used to work for Hermann Life Flight from '90 to '96. For the most part, you are correct. The lower the letter(i.e., Lima or Mike) means there is more fuel on board, while Bravo or Charlie is less fuel. The number following the letter is the number of souls on board. The double letter index indicates the aircraft is double loaded with patients.
At least this was the way it was while I was there. Hope this helps!

Topic: 3067 Message: 3067

I need help finding links to the following Houston Area Fire Dept's Websites:
Aldine
Baytown
Beaumont Rd
Blue Ridge
Brookside
Clear Lake City
Clear Lake Shores
Community
Conroe
Eastex
El Lago
Forest Cove
Fort Bend County Firefighter's Assoc
Galena Park
Highlands
Katy
Kemah
Kingwood
La Porte
McNair
Middlebrook
Montgomery Co. Firefighter's Assoc
Mount Houston
New Caney
Northwest
Porter
Seabrook
Sheldon
Shoreacres
Southeast
Southside Place
South Houston
Timber Lakes
Waller
Webster
West Univ Place
Westfield
Westlake
Woodlands
or any other Houston area FD you can think of.
Thank you very much for your help!
Marvin

Topic: 3067 Message: 3068

For Aldine, Westfield, etc, go to www.hcec911.com.
Thank the powers that be, Mt. Houston VFD was
disbanded and the district was split between Eastex
VFD and Beaumont Rd. VFD. All others, try seaching
www.google.com.

Good luck.

I know my page of links leaves much to be desired,
http://home.houston.rr.com/freqzone/scanner.html
but maybe some city government link sites could be helpful.
http://www.statelocalgov.net/tx.htm#Cities

From the look of it, I think you exhausted this reference but some here
might find some info (it is quite outdated though):
http://db.fire-ems.net/firedept/deptlist/us/tx/

I don't know if this one is any better:
http://www.the911site.com/911lk/texas.shtml

And here's another site:
http://www.firefighting.org/texas.htm

Wait, there's more---
http://www.texasfirefighter.com/TX_FD_LINKS.htm

and
http://users2.ev1.net/~txadam/tes/

These may be repeating the same info over and over...
http://www.houstonfiremuseum.org/links.html

Here's how I got these and there's more.
www.google.com
search for 'fire department texas'

Did find the Woodlands though -
http://www.wcscwoodlands.com/firedept/index.html

Topic: 3067 Message: 3071

If you can't find a website for a dept. you want, you might try: www.tcfp.state.tx.us/directory/TX_fire_depts.asp You will find the names, addresses, & phone numbers of most fire depts in this area. I'm sure if you give most depts a phone call, they would be happy to give you their web address. This is the website of the Texas Commission on Fire Protection. They also have a search feature in case someone you want is'nt listed.

Dan

Peace~out

Was looking at this list for Harris County and I saw an entry for Houston Volunteer FD.
Info was from '97 but does anyone know the story behind this?
Are there some sort of unpaid reserves that can be called upon?
Actually, if you look above and below the city's paid department, you'll find two VOL departments.

I know there is a Houston Vol. FD because several years ago one of them died at a fire-I think he had a heart attack. I don't know the difference between the 2 on that list, possibly someone at the fire museum would have the info. It would be interesting to find out how they operate.

The Houston Volunteer Fire Dept is a small unpaid reserve. Very small at 20-30 members, so not really any significant backup to the paid dept. It is a hold over of the Civil Defense organization of the world war 2 era. I was a member until I left Houston in 1979: we were generally refered to around HFD as the "CD's." The organization still operates and I was informed recently that the HFD Public Information Officer, Jay Evans, is the chief. This would make sense since Jay has been in vol dept since before I was. If you have access to the HFD album of a couple of years ago there is a section in there on the H-VFD.

Date: 2002-09-24 13:37:52 UTC
From: Joshua Wallace
Topic: 3080 Message: 3080

Here are some railroad freqs I listen to.

160.365-New Beaumont Sub (old SP main line) freq-no longer TD03-used in and past Beaumont

160.875-new TD03 channel-no longer Beaumont Sub (Why did these channels trade places?)

160.47-new Galveston Sub channel

160.41-Palestine Sub-now used from Houston north (good to listen to going down the Hardy Toll Road), also Lloyd Yard in Spring

On a totally unrelated subject, I heard an unconfirmed report that an individual was arrested in Brazoria County for posessing a Motorola Spectra programmed to monitor their trunked system. They allegedly referred to it as a "contraband monitoring device". Is there any truth to this? Have they passed a law specifically prohibiting certain types of radios for monitoring? I have family in the Lake Jackson-Clute-Freeport area, so any info would be greatly appreciated.

Then if there is any truth to the individual was
arrested in Brazoria County for posessing a Motorola
Spectra programmed to monitor their trunked system.
They allegedly referred to it as a "contraband
monitoring device". Is there any truth to this? then
they need to come arrest all the wrecker drivers that
have 5-8 of these radios in there truck I personnel
have 5 of them being installed in my wrecker friday
this week?????? It looks like Brazoria County might be
in trouble for False arrest HUmmmmmmmmmm Interesting

Thank you for posting the URL of the Fire-EMS Net!

From that valuable resource, I have discovered a truly unique volunteer group in your area. It would appear that this group, listed on the Net, exists to deliver to residents of the surrounding community a fast-food delicacy consisting of long, narrow rectangles of potato, which have been brought to a sufficient temperature in heated oil to appear golden brown, and which are then lightly salted.

I understand that the volunteers are contacted by dialing 9-1-1, and that they offer to "supersize" your order for a reasonable fee.

Their Web pages may be examined at
http://www.fire-ems.net/firedept/view/Katy2TX

A Spectra has as much ability to receive encrypted messages as does any scanner.
A Spectra by itself won't give you the ability to receive encryption.
As far as I know, the only trunked system that is using encryption (DVP) is the Galveston County system (in this area).
Harris County has been playing with digital transmissions. Whether these are encrypted or not, doesn't matter to me since I don't have a digital receiver (yet).

Lots of activity on 154.130 MHz from La Porte FD.
OK, just announced that it was a drill.
Man! They sure have a lot of drills.
They were talking about railcars and some guy in the area smoking a cigar
that would not leave the area. Didn't sound like something that they would
make part of a drill.

I have heard Brazoria County using DVP on their Narc Ch. 3 talkgroup (26160) in the past. And even if the individual in question had an encryption module for his radio, he wouldn't be able to use it without a key code. Oh well, if you're not doing anything illegal (like using a bootlegged radio ID to key the system), then you have nothing to worry about.
Myles Barkman wrote:A Spectra has as much ability to receive encrypted messages as does any scanner.

I haven't really checked STAR-Net for special ops for this. This is all
pretty much Houston-related.

Who was the visiting VIP? I looked on the HFD Active Incidents page
and saw 2 outlying medical units (M073,AS082) on Standby downtown and
thought maybe something serious had happened.

A list of Houston area public service agencies that failed to respond to audit letter sent out by the FCC. Licensees who fail to respond *may* have their frequencies relicensed elsewhere. Not shown are scores of others in outlying areas like Sugar Land, S. Houston, Stafford, Conroe, Crosby, Galveston, Kingwood, Rosenberg, Texas City, Woodlands, Webster, and more. If one of these agencies covers where you work or play, you may want to send them a gentle reminder.

Looks like this is used by Juvenile Detention/Probation.
Licensed for 533 portables on 154.815 MHz.
Thought they were all on the trunk system.
Let's give this a listen...

> KA54763 ,WILLIAM H. THOMPSON,"HARRIS, COUNTY OF",3540 WEST
> DALLAS,,HOUSTON,TX,77019,PW

This was for some 153.800 MHz freq at Hobby that I don;'t know what it was used for.
> KNHK656 ,AVIATION DEPT DEPUTY DIRECTOR O & M,"HOUSTON, CITY
> OF",,60106,HOUSTON,TX,77205,PW

This is for the old 488 MHz airport police freqs that were abandoned for the current 453 MHz freqs.

APCO published it as an Excel spreadsheet. Covers the whole country.
I've misplaced the link - it's on APCO's site. I can send you the XLS
file if you like.

"auditPS.xls" - about 3.2 megs in size.

3106. Cy-Fair VFD High Band

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-09-28 23:21:08 UTC
From: tom22549
Topic: 3106 Message: 3106

Last night Cy-Fair responded to a major accident along Beltway 8 near Philippine. 3 LifeFlight helicopters were dispatched to the scene. The ground contact was District 1 on "Cy-Fair Hi band mutual aid".

I have ITAC 1-5 programmed but could not hear them on that. When the dispatcher sent other calls out, I could hear the chief in the background of her call (must have been on a speaker at the comm center) Is there another talk group they use on Starnet or another frequency altogether? I live close enough to the site that I should have been able to pick up even a low power transmission. Does anyone know the frequency Cy Fair uses to talk to Lifeflight? I pickup talk group 208 on Starnet just fine. I can also get them on 128.850.

Any help would be appreciated.

Tom F.

3107. Ft Bend County Fair

Yahoo group: HoustonScan (1999 — 2002)

From: bpckty1
Topic: 3107 Message: 3107

It's county fair time again. The Ft. Bend County Fair is going on this weekend, and so far, I have heard fair operations on FB Talkgroup 2512, Tac 2. I am too far away to hear if they are using any NSPAC direct channels or if the listed Fort Bend County Fair Association frequencies, 461.2875, 461.7875, and 461.8625 are in operation.

Happy Scanning

Date: 2002-09-28 23:29:25 UTC
From: Erich
Topic: 3106 Message: 3109

Tom,

I am the Communications Officer for Cy-Fair VFD. We land Life Flight on Statewide Fire Mutual Aid AKA VHF/High Band Mutual Aid (154.280 CS). If District 1 was on his mobile it was pushing 45 watts and if he was on his HT it was 4 watts (probably on his HT). The reason you heard his voice in the back ground is that we are encoding Kenwood Fleetsync when our dispatchers use their control radios. In order to get audio back to the consoles to hear the sidetones we had to unmute the other speakers, so the unselected speakers have full audio near the microphone. Typically it is not too big of a problem, but occasionally it will get us. Be on the look out. We do not utilize the county system at all.

Hope this helps

Erich Burrer

TCPAT3
BULLETIN
HURRICANE LILI SPECIAL ADVISORY NUMBER 45
NATIONAL WEATHER SERVICE MIAMI FL
1 PM CDT WED OCT 02 2002

...LILI STRENGTHENS RAPIDLY TO DANGEROUS CATEGORY 4 HURRICANE...

A HURRICANE WARNING REMAINS IN EFFECT FROM EAST OF HIGH ISLAND TEXAS
TO THE MOUTH OF THE MISSISSIPPI RIVER. PREPARATIONS TO PROTECT
LIFE AND PROPERTY IN THE HURRICANE WARNING AREA SHOULD BE RUSHED
TO COMPLETION.

A TROPICAL STORM WARNING REMAINS IN EFFECT FROM FREEPORT TEXAS TO
HIGH ISLAND...AND FROM THE MOUTH OF THE MISSISSIPPI RIVER TO THE
ALABAMA/FLORIDA BORDER...INCLUDING NEW ORLEANS AND LAKE
PONTCHARTRAIN.

AT 1 PM CDT...1800Z...THE CENTER OF HURRICANE LILI WAS LOCATED
NEAR LATITUDE 25.3 NORTH...LONGITUDE 89.4 WEST OR ABOUT 325 MILES
SOUTH OF NEW ORLEANS LOUISIANA.

LILI IS MOVING TOWARD THE NORTHWEST NEAR 15 MPH...AND THIS GENERAL
MOTION IS EXPECTED TO CONTINUE FOR THE NEXT 24 HOURS.

REPORTS FROM AN AIR FORCE RESERVE HURRICANE HUNTER AIRCRAFT INDICATE
THAT MAXIMUM SUSTAINED WINDS HAVE INCREASED TO NEAR 135 MPH...WITH
HIGHER GUSTS. THIS MAKES LILI A DANGEROUS CATEGORY 4 HURRICANE ON
THE SAFFIR-SIMPSON HURRICANE SCALE. ADDITIONAL STRENGTHENING
IS POSSIBLE THIS AFTERNOON AND TONIGHT.

HURRICANE FORCE WINDS EXTEND OUTWARD UP TO 45 MILES FROM THE
CENTER...AND TROPICAL STORM FORCE WINDS EXTEND OUTWARD UP TO 185
MILES. HURRICANE-FORCE WINDS ARE EXPECTED TO SPREAD INLAND UP TO
150 MILES NEAR THE TRACK OF THE CENTER OF LILI.

THE LATEST MINIMUM CENTRAL PRESSURE REPORTED BY THE HURRICANE HUNTER
IS 941 MB...27.79 INCHES.

A LIFE-THREATENING STORM SURGE OF 10 TO 15 FEET ABOVE NORMAL TIDE
LEVELS IS LIKELY NEAR AND TO THE EAST OF WHERE THE CENTER CROSSES
THE COAST. THIS SURGE COULD SPREAD WELL INLAND ACROSS THE LOW-
```

LYING AREAS OF THE HURRICANE WARNING AREA.

RAINFALL ACCUMULATIONS OF 6 TO 10 INCHES ARE POSSIBLE ALONG THE
TRACK OF LILI.

REPEATING THE 1 PM CDT POSITION...25.3 N... 89.4 W. MOVEMENT
TOWARD...NORTHWEST NEAR 15 MPH. MAXIMUM SUSTAINED
WINDS...135 MPH. MINIMUM CENTRAL PRESSURE... 941 MB.

FOR STORM INFORMATION SPECIFIC TO YOUR AREA...PLEASE MONITOR
PRODUCTS ISSUED BY YOUR LOCAL WEATHER OFFICE.

THE NEXT ADVISORY WILL BE ISSUED BY THE NATIONAL HURRICANE CENTER
AT 4 PM CDT.

FORECASTER BEVEN

HURRICANE LILI SPECIAL ADVISORY NUMBER 45
NATIONAL WEATHER SERVICE MIAMI FL
1 PM CDT WED OCT 02 2002

...LILI STRENGTHENS RAPIDLY TO DANGEROUS CATEGORY 4 HURRICANE...

A HURRICANE WARNING REMAINS IN EFFECT FROM EAST OF HIGH ISLAND TEXAS
TO THE MOUTH OF THE MISSISSIPPI RIVER. PREPARATIONS TO PROTECT
LIFE AND PROPERTY IN THE HURRICANE WARNING AREA SHOULD BE RUSHED
TO COMPLETION.

A TROPICAL STORM WARNING REMAINS IN EFFECT FROM FREEPORT TEXAS TO
HIGH ISLAND...AND FROM THE MOUTH OF THE MISSISSIPPI RIVER TO THE
ALABAMA/FLORIDA BORDER...INCLUDING NEW ORLEANS AND LAKE
PONTCHARTRAIN.

AT 1 PM CDT...1800Z...THE CENTER OF HURRICANE LILI WAS LOCATED
NEAR LATITUDE 25.3 NORTH...LONGITUDE 89.4 WEST OR ABOUT 325 MILES
SOUTH OF NEW ORLEANS LOUISIANA.

LILI IS MOVING TOWARD THE NORTHWEST NEAR 15 MPH...AND THIS GENERAL
MOTION IS EXPECTED TO CONTINUE FOR THE NEXT 24 HOURS.

REPORTS FROM AN AIR FORCE RESERVE HURRICANE HUNTER AIRCRAFT INDICATE
THAT MAXIMUM SUSTAINED WINDS HAVE INCREASED TO NEAR 135 MPH...WITH
HIGHER GUSTS. THIS MAKES LILI A DANGEROUS CATEGORY 4 HURRICANE ON
THE SAFFIR-SIMPSON HURRICANE SCALE. ADDITIONAL STRENGTHENING
IS POSSIBLE THIS AFTERNOON AND TONIGHT.

HURRICANE FORCE WINDS EXTEND OUTWARD UP TO 45 MILES FROM THE
CENTER...AND TROPICAL STORM FORCE WINDS EXTEND OUTWARD UP TO 185

MILES. HURRICANE-FORCE WINDS ARE EXPECTED TO SPREAD INLAND UP TO
150 MILES NEAR THE TRACK OF THE CENTER OF LILI.

THE LATEST MINIMUM CENTRAL PRESSURE REPORTED BY THE HURRICANE HUNTER
IS 941 MB...27.79 INCHES.

A LIFE-THREATENING STORM SURGE OF 10 TO 15 FEET ABOVE NORMAL TIDE
LEVELS IS LIKELY NEAR AND TO THE EAST OF WHERE THE CENTER CROSSES
THE COAST. THIS SURGE COULD SPREAD WELL INLAND ACROSS THE LOW-
LYING AREAS OF THE HURRICANE WARNING AREA.

RAINFALL ACCUMULATIONS OF 6 TO 10 INCHES ARE POSSIBLE ALONG THE
TRACK OF LILI.

REPEATING THE 1 PM CDT POSITION...25.3 N... 89.4 W. MOVEMENT
TOWARD...NORTHWEST NEAR 15 MPH. MAXIMUM SUSTAINED
WINDS...135 MPH. MINIMUM CENTRAL PRESSURE... 941 MB.

FOR STORM INFORMATION SPECIFIC TO YOUR AREA...PLEASE MONITOR
PRODUCTS ISSUED BY YOUR LOCAL WEATHER OFFICE.

THE NEXT ADVISORY WILL BE ISSUED BY THE NATIONAL HURRICANE CENTER
AT 4 PM CDT.

FORECASTER BEVEN

Just the west end of the island and it is voluntary as far as I understand it.
High Island and east of here is being evacuated as I type this as a 10 to
20 foot sea surge is expected. not counting a tide wall of over 5 feet of
normal so you take from there. With sustained winds of 135 MPH gusting
to 150 MPH. It is now classified as a category 4 hurricane.

I heard a little while ago on Chambers Co. Old Primary (155.805 pl 146.2) that Galveston County was recommending evacuation and that they were activating the evac route lights along Highway... and then it was blanked out. Try monitoring 145.41 as this is the repeater used by Galveston Co. EOC. Hurricane advisories and bulletins are also reguarly broadcast on the Saltgrass Link System (443.825 in Houston).

From: Myles Barkman
Topic: 3120 Message: 3120

I haven't verified these but if you are interested in listening to Louisiana emergency traffic, you might try these:
3873 kHz
3910 kHz
3925 kHz
3935 kHz
These are all Lower Sideband.

During the daytime, you might try these:
7235 kHz
7245 kHz
7280 kHz
7285 kHz
7290 kHz
Also all Lower Sideband

Don't know how bad Mississippi got it but try these:
3862.5 kHz
3873 kHz
3910 kHz
3923 kHz
3935 kHz
7285 kHz
7290 kHz
You might notice some of these are common to Louisiana.
3873, 7285 and 7290 are also used in Texas.

I think 3873 has been active. If you find anything, let the group know.

Also, 444.250 was linked to the IRLP internet amateur radio link system. There were folks checking in from all over last night. In particular, I listened to someone in Abbeville (I think that's where he was) close to where the eye came in. W4EHW also was on the link. That is the station at the National Hurricane Center in Miami.
Don't know if that repeater is typically linked in or if it was special for this occasion. Maybe someone who knows can let us know. It was the WD5KCX repeater which I think is in west Houston somewhere.

Oh, and on a different subject, watch out for a new virus-the W32.Bugbear@mm virus. It spreads much like the Klez worm I think. So don't blame the apparent "sender" of the email. It is someone else infected that has you and the "sender" in an address book.

Have some sort of incident working at Shell.
Ops on 462.225 MHz relay of their UHF trunking system emergency ops group.
Patient sounds like they must have come in contact with some substance.
Was on the 6th floor of some unit and is being lowered now.
Got him in a basket with non-rebreather & O2.
Ambulance OS standing by.

I saw the new "EMS" people at Pet co and they had funny old radios that said "MEDIC 2" with a label maker label on it. Didn't look like trunked radios.

I assume that you are referring to the changeover from Rural Metro to ETMC in Pasadena.
"Digest Number732" doesn't help me much in this regard.

They are using the same talkgroups on the Pasadena trunked system that Rural Metro used. Sounds like they are using the same dispatchers. Don't know if they are using the same crews.
They use "Medic 1,2,3,4" numbers instead of 701,702...
I haven't seen their ambulances yet although I have seen Enterprise Ambulances around here alot.

Does he remember what the model number was on the "funny old radios?" Also, the new ambulances are green and white and sport two antennas, a black 800 MHz pigtail and a flat low-profile antenna that may be VHF. Go by the new Super 8 Motel at Vista and Beltway 8; they're using it as their temporary base of operations.

3126. Galveston County trunk

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-09 00:29:36 UTC
From: Myles Barkman
Topic: 52 Message: 3126

Been noticing for some weeks now that I'm not getting as good a signal up here on the Galveston County trunk system that I used to.
I never had a *great* signal on it to begin with but at least I could pick them up without having to do a one-handed handstand in the northwest corner of the room while whistling "sitting by the dock on the bay".

I even have a hard time getting a lock on the control signal with my 'more sensitive' BC235 hooked up to the discone on the roof.

Anyone else notice weaker signals on them?

p.s. If you know better tips for getting a better signal, let me know.
Maybe a better song? :)

Looks like a possible tornadic thunderstorm north of Rosenberg approaching
the Clodine area.
Would not be surprised if they put out a tornado warning on this.
Looks like slight hook and storm is turning to right.

I'm in Webster and I used to be able to pick it up at my base unit in the apartment (RS-Pro2053).
Now I have to go outside with the handheld (Pro-93) to pick it up.
But the funny thing is, if I'm driving from Deer Park (Center St), I pick it up clearly.
Then, when I'm on RedBluff/Genoa RedBluff intersection, it craps out until I get to about Bay Area/El Camino. Grr.. I don't know. That's with the Pro-2067 in the car and the handheld
with a glass-mount outside antenna.

It doesn't matter how you program Motorola type I and II freqs into a trunktracker scanner.
It is more efficient to put the (up to) four possible control channels in the first slots so that the scanner will lock onto them quicker instead of going through several busy voice channels trying to figure out which one is the control channel.

But if you don't have a very good signal anyway, it will just keep scrolling through the channels since it can't tell what is voice, data or control channel.
And with all the trunk systems around here on adjacent channels, the few times I'm able to get a lock on the Galveston trunk, I get bleedover from other trunk systems so even through I see a talkgroup number on the Galveston system, I could be hearing garble from the Harris County toll road folks bleeding over from the booming Star-Net system.
That's what I get for not having a commercial radio.

It sounds like Galveston may have move or "refocused" some antennas to provide better coverage to a certain area. It is not uncommon to move antennas to move the radiation pattern.

Myles, Email me direct to remind me of what antenna equip you have. I'll try to help if I can.

Here's a little trick I like to use. Take an SO-239 or N-type chassis-mount coax connector and solder an 800 MHz "pigtail" to the center conductor. If one's not handy, take a coathanger, straighten it out, and, using a 3/8 dowel as a form, wind a 6 turn coil spaced 3/16 apart. Leave 3 inches straight from the bottom and 6 1/4 straight from the top. Bend a small eyehole into the top of the 6 1/4 inch part. Sand off about an inch on the bottom and solder this to the coax connector. Cut 4 pieces of wire 3 inches long and either use small machine screws or solder to attach these to the four corners of the coax connector. You now have a matched, 1/2 over 1/4 wave 800 MHz/900 MHz groundplane that can be used for scanning, a two-way radio, or a cellphone. You can use the eyehole to hang it from a hook in the ceiling or another convienent elevated point. Using this same antenna on top of a Pro-92 handheld scanner with the proper adaptors, I was able to hear Galveston County in my driveway in Pasadena and after climbing a tree (!), Missouri City, Fort Bend County, and Chambers County.

A question regarding your antenna trick.
Can I use copper wire and is there a certain diameter thats works
better.
I very quickly bent, wrapped, and measured with #14 bare copper wire
and had good results with my PRO-93.
The copper is a lot easier to bend than the wire hanger.

Thanks for sharing the tip.

Monaville VFD expels fire chief
By:Billy Dragoo, News Citizen Editor October 10, 2002
MONAVILLE - The Monaville Volunteer Fire Department has expelled the fire chief and other officers and turned back one of its fire trucks to the financing bank.

The actions came during a MVFD meeting last week.

According to MVFD treasurer Barbara Stafford, the fire department membership voted Thursday night to expel Fire Chief Kevin Robinson, other officers in the department and the former board of directors.

"The letters went out to them and they have until Oct. 17 to respond to the expulsion," Stafford said Tuesday. "The fire chief and four others have turned their equipment in."

Stafford said the decision was made after it was discovered that some fire department was inoperable.

"Only one fire truck out of the four would run," she said, "and some did not have inspection stickers on them."

No, the diameter or type of wire used is not critical. I have made them using coathangers, solid copper wire recycled from transformers,etc. Brass welding rods work real well, but bending one into a pigtail requires a little bit of patience and a lot of effort. And if you're going to use it outside, be sure to seal the top of the connector with RTV silicone or water will get down inside the coax.
mush0man <mush0man@...> wrote:--- In HoustonScan@y..., Joshua Wallace <ayanami419@y...> wrote:
>
> Here's a little trick

A question regarding your antenna trick.
Can I use copper wire and is there a certain diameter thats works
better.
I very quickly bent, wrapped, and measured with #14 bare copper wire
and had good results with my PRO-93.
The copper is a lot easier to bend than the wire hanger.

Thanks for sharing the tip.

Couldn't have been looking too hard.
They've been in the Star-Net talkgroup list for years.
I would assume being inside the loop that they affiliate to the downtown site.
Police use talkgroups 14928 and 16016.
Fire uses 16048. Don't know if there is a channel 2. For some reason, I have this as "Ch.1".
Fire dispatches can also be heard on 155.040 MHz.
Public Works uses 16144 and 16176.

I think I'll make another list that just shows municipalities and what trunk system or frequency their public safety departments use.
(Oh yeah, another list).

I can't hear Humble from down here but last time I was up there, they were using their own conventional 800 freqs for PD. They also have conventional 800 for FD and simulcast on 154.415 MHz.
They have some talkgroups set aside on the Star-Net system but don't think they use the PD/FD groups much if at all.
Don't know why they would use them sometimes. I have it my list that the talkgroups are a backup to their conventional system (sounds strange eh?).
I think public works uses the Star-Net system.
Until the Humble Star-Net site goes online, all trunked action is most likely on the Huffman site.
If/when the Humble site goes online, it appears that the current conventional freqs used by Humble PD and FD will be used for the trunk system.

Check for new repeaters in the area:
In addition to Conroe using 155.445, it looks like they have a repeater in Huntsville on 159.210 or 159.2175.
Can anyone up there confirm?

I see there is a new repeater licensed on 159.210 on the Fred Hartman Bridge (Baytown tunnel site).

There is also a 159.210 repeater licensed in Danciger in (far west) Brazoria County. Don't know if this is particularly new but might listen out for something.

I noticed a few "odd" talkgroups like those last week but didn't look into them until now.
It appears that Brazoria County has joined the ranks of the Star-Net system.
Now my question is, are the old Brazoria County system freqs out of service and the new ones being used?
The new (proposed) freqs are
866.475,867.225,867.725,867.975,868.075,868.475,868.9625
I've also hear 23952 Brazoria County SO Dispatch 1 and 25296 Angleton FD
24528 is Angleton PD
25840 is listed as Brazoria County parks maint.
12784 is on the list as Alvin public works
14896 is Harris County central dispatch. It is often dispatched by the Channel 10 (Info) dispatcher.

The original Brazoria County site is still up and running, with the same control channels. I was listening to it from Pasadena last night. It is likely, however, that if they have joined STAR-NET, the system ID will change from 4f37 to 2318 like with Chambers and Fort Bend counties.

It is more likely that they put an Omnilink Controller in. This would allow units to roam from system to system keeping their talkgroups structure intact. If you look at the talkgroups for most o f the counties, the local mtug group agreed to align all the talkgroups so that they could add the ability to roam onto each others systems.

Only Chambers County has totally dropped their own system in favor of letting the HC run their system. (to much cost involved and no radio shop locally to handle that type of system).

3165. Omnilink

SmartZone OmniLink
SmartZone OmniLink allows you to link multiple SmartZone systems into one very wide area, transparent two-way radio communications system. Users don't have to worry about boundaries anymore as SmartZone OmniLink radios allow for virtually transparent roaming throughout the system's expansive coverage area. A SmartZone OmniLink system is designed with maximum reliability in mind. The inherent reliability of SmartZone OmniLink's distributed architecture virtually eliminates the star architecture risk of having each interzone communication link routed through one vulnerable central hub. SmartZone OmniLink also has great flexibility in meeting your call capacity requirements. Large systems can take advantage of the increased console audio capacity to meet high interzone call traffic loads while other more bandwidth-sensitive customers can scale back system designs to meet their unique needs.
☐Up to 28 channels per site
☐Analog and/or Digital Voice
☐1,000's of users
☐APCO 16 Supported
☐Multi-site (Up to 192 sites)

3166. Omnilink Part II

Yahoo group: HoustonScan (1999 — 2002)

Topic: 3166 Message: 3166

At the bottom of this great Trunking explanation is a more realistic definition of Omnizone. Multiple Smarztone Controllers tied together via Lease lines (T1) to allow their databases to talk to one another for wide range and incredible capacities, (System ID, User ID)0d16 00001 would be the validation point of this ID into the system for this user. What ever site would see this information would know to ask system 0d16 if user 00001 could talk on the Omnilink system on the talkgroup that he wants to talk on.

Trunking dynamically assigns pooled frequencies within the electromagnetic spectrum, on an as-needed basis. Assignment of a frequency, or channel, is done via some form of digital signaling. LTR, SmarTrunk, EDACS, MARC-V, MPT, TETRA, iDEN, and traditional Motorola trunking are examples of the types of trunking currently available.

****

Here's an example of Trunking using a real life experience:

Say you need to go to the bank to visit a teller. The bank has fifteen teller windows but this time of the day the traffic is slow so some windows are open, and available for any entering customer, and some busy. As a customer enters the bank he or she simply proceeds to an open window and begins their transaction. Now the day grows later and traffic begins to pick up. Numerous customers enter the bank at a pace quicker than any transaction between a customer and teller so a line, or queue, is created. This type of queue basically works on the principle of first come, first served. In the computer world this is referred to as First In-First Out, or FIFO.

Applying that example to trunking makes the bank the central controller (Because they create the queue and process requests), the teller is the channel (Where communication occurs), and the line is the busy queue.

Another form of trunking, though used in the background, is the modern telephone network (PSTN). The telephone, when idle, does not have a permanent link anywhere but its switch; it's only when a called number is available (When CCS is used) that a trunk will be assigned. In the older days of analog and in-band signaling, as soon as a number was dialed, a path, or trunk, was created. In a nutshell, paths between switches are referred to as trunks. They are assigned on an as-needed basis.

Trunking currently exists within the United States on only the following bands: VHF, UHF, 220, 800, and 900MHz. There are plans to

develop another band, specifically for Public Safety, on 700MHz.

More on Motorola trunking and trunking in general:

Most dominant forms of trunking (Motorola or EDACS) use a channel within the system to announce activity. This is referred to as the Control Channel, which is the voice of the Central Controller. The controller listens for inbound traffic on one frequency and retransmits network data via another frequency, typically the frequency's offset. For VHF or UHF, further described here, the offset frequency can vary, and may be lower or higher than the base station's frequency. For 800MHz the controller listens on the lower frequency (Commonly 806 to 824MHz) with a split of 45MHz. For 900MHz the controller also listens on the lower frequency, with a split of 39Mhz.

Data communication via the control channel uses signaling words. These are simply blocks of 1's and 0's formatted to the signaling protocol. A signaling word is commonly referred to as either an ISW (Inbound Signaling Word), which is sent from the subscriber, or OSW (Outbound Signaling Word), which is sent by the control channel.

The Central Controller is the primary processor and decision-maker for the network. (Much larger networks, such as SmartZone, use a master controller called the Zone Controller [ZC]. The ZC manages each central controller at each site.) It assigns frequencies based on which are available and in service. It also designates who uses the system and who does not. Each and every type of network has a variety of services available, which the central controller will manage.

To communicate through a trunked network conversations are styled after the old conventional method of radio communication, which involved speaking to a group. In order to coordinate and differentiate, a number is permanently, and in some cases temporarily, assigned to this conversation. This number is called a talkgroup. The talkgroup is simply a group's address. Anything addressing the group will be heard by every subscriber associated with that group, regardless of what frequency they are on. Talkgroup calls fall under the category of the Dispatch designation. Equipment usually has designations for the types of calls such as dispatch, individual, or telephone interconnect.

With trunked radio subscribers are unaware of what frequency they are on or their true activity on the system. The radio is responsible for keeping track of where to go and what to do. To identify a specific radio an individual number is associated with that radio, called a radio or individual id. This allows for the controller to allow or reject users based on its subscriber access control database [SAC]. An individual radio id is a lot like a computer network logon name except that each time a subscriber makes a call, or changes channels, its radio id is authenticated, and possibly logged.

Just as a group can be addressed via its talkgroup, a radio can also be specifically addressed. It can either be an administrative feature, such as to shut the radio off (Selective Inhibit) in the event it is lost or stolen, or it can be a call request. A call between individual radios is called a Private Call. A private call is only heard by the individual radios and occurs without the knowledge of any other subscriber on the network.

There is another form of group, which is used to represent a pool of talkgroups. It is commonly referred to as an ATG (All Talkgroup) or MultiGroup. A MultiGroup is created within the SAC and is then associated with specific groups. This is mainly for reference purposes and does not influence how a MultiGroup operates. A MultiGroup is more for subscriber use. When a radio is programmed a personality is created with a list of talkgroups, fifteen total. This personality can then be assigned one MultiGroup. When the subscriber selects the MultiGroup they will hear traffic for whichever talkgroup is associated with that MultiGroup via its programming. If a subscriber transmits on the MultiGroup, the call goes out on that talkgroup id but is marked as a MultiGroup. The receiving radios are constantly scanning the control channel for their associated talkgroups and the MultiGroup associated with them. The radio is simply the device which makes the MultiGroup function properly.

In addition to calling a group of people or an individual radio, a link to a landline can be created. A properly programmed and enabled radio can hit a button or navigate a menu to initiate a telephone call to the outside world.

A party via landline may also call an individual radio or talkgroup. The calling party will be prompted for a form of identification for the group or radio, and then routed to their destination.

Subscriber radios can also send pages to other subscriber radios. This feature is called Call Alert. A subscriber simply selects, or manually enters a radio id, and presses their PTT button. If the target radio is currently monitoring the control channel it will alert the subscriber through an on-screen icon or by a repeating tone, similar to a pager. Call Alerts only occur over the control channel and use very little resources.

When a talkgroup needs to be temporarily assigned for a specific event, or to wrangle specific radios together, radios are dynamically regrouped. Initial programming of the radio should provide a mode specifically for dynamic regrouping. This mode is typically empty and will give a warning tone if a subscriber selects it. Once the radio receives the dynamic regroup command will that mode be populated with a talkgroup id.

In addition to temporarily creating a group a subscriber radio may be sent a command referred to as selector lock. Selector lock pushes radios over to the dynamic regroup channel and locks them there. Any mode change by the subscriber will not move them off that mode.

More sophisticated networks will have consoles attached to them. The console is what a dispatcher uses to access talkgroups on the network, in addition they can access conventional equipment if needed. Consoles are connected to the network via a direct link giving them direct access to resources. Consoles have the option to monitor multiple talkgroups at the same time. Talkgroups are seen on a dispatcher's screen as icons. The icon shows the alias name and the last radio id that transmitted on that talkgroup.

The software, which consoles operate with, is called Radio Dispatch Management [RDM]. RDM allows the dispatcher to perform their normal dispatching plus issue commands such as patching of talkgroups, private calling subscribers, issuing a temporarily broadcast to multiple talkgroups called a MultiSelect, dynamically regrouping radios, and other various administrative commands.

As previously mentioned, when a dispatcher would like to link multiple talkgroups together they create a patch. There are two ways a patch may operate, the first is resource intensive and involves placing a call to each individual talkgroup tying up many frequencies. This is only used when older radios are used on the system that cannot recognize the newer form of patching. The second, and newer method, involves placing one call, using one frequency, and allows the subscriber radio to do the work. A command is sent out over the control channel announcing a patch has occurred. There are multiple announcements, which the radio will link together. The initial group where the patch was initiated on is called the SuperGroup and is identified in each announcement.

Another form of patching, yet really not a patch, is a MultiSelect [MSEL]. MultiSelect is used by the Dispatcher to broadcast a message to multiple talkgroups but without the need for subscribers to reply. With patching, the patch is up for however long the Dispatcher would like it to be. A MultiSelect only lasts for as long as the Dispatcher makes the call. A MultiSelect announcement may operate in two forms, similar to patching.

Along with consoles, a CAD (Computer Aided Dispatch) system can be integrated into the network. A feature of trunked radio allows a subscriber radio to update the CAD with their current status. Either Status or Messaging is enabled within the radio, then assigned an alias as to which status button determines which action. When an officer arrives on-scene he can simply push a button on the radio, which would in turn send the message in via the control channel. The controller would then receive it and notify the CAD with the officer's status. With conventional radio MDC-1200 was used for status messaging. The purpose for both is essentially the same.

Considering all conversations are virtual, and not strapped to any physical channel, the system may be upgraded or downgraded based on operator needs. A radio simply needs to know the control channels (Up to four per site), its radio id, and the talkgroup it is allowed to

access. Everything else within the system is available to be changed as needed.

Most common networks will have four to twenty-eight channels available for trunking. With networks such as SmartZone you can have a single channel site which uses Voice On Control [VOC]. VOC allows the Control Channel to momentarily become a voice channel. VOC is only used for low traffic sites. EDACS has a similar feature called SCAT. It operates in essentially the same manner.

A typical single site system is made up of a cabinet and multiple repeaters, which are all linked via RS-232C. The cabinet itself is where all the action happens. There are several cards which are responsible for processing inbound subscriber requests, channel status, control channel format and selecting the proper control channel, and the actual processor. Adding features like encryption or telephone interconnect adds additional hardware. Each voice channel in the network must specifically be equipped for telephone interconnect or encryption. Whether the controller is Privacy Plus or SmartNet, it's all simply firmware.

Once Wide Area Coverage is needed the site can be upgraded to Simulcast. A Simulcast network has multiple sites operating on the same frequencies. With Motorola networks you are limited to a total of ten sites in the subnetwork. Out of the ten there will be one designated as the prime site. All site audio from your satellite sites will be routed to this site. Each site will have a voting receiver except the prime site, which will have both a voting receiver and comparator.

Simulcast works on a simple principle of broadcasting the same traffic at each site. In order for a clean signal, and to prevent multicasting (Where two signals mix together deconstructively), you must provide a reference clock. This makes sure each site transmits a frequency at the exact or near the same time (Making the waveforms identical). Typically GPS time is used as the reference and fed to the oscillator, which produces the pulse train used as a clock. In lower budget system a simple frequency generator is used.

Simulcast works in cooperation with Receiver Voting. This is where the prime site comes into play. When each satellite site forwards its audio to the prime site, the prime site's comparator compares or votes which site has the best audio, then resends it to every site to be rebroadcasted. The principles of Simulcast and stand-alone Receiver Voting are used in the same manner as in conventional radio. Configuration of Simulcast networks is highly involved and well beyond the scope of this document.

When sites are not properly timed a whining or echo effect can be heard. This can often be heard on the Control Channel without much difficulty.

SpectraTAC, DigiTAC, and ASTROTAC are all forms of receiver voting systems. The TAC in the product name stands for Total Area Coverage. Each one of these receivers supports specific audio types because the receiver must know how to differentiate signal quality for each transmission type.

SpectraTAC is used for analog voice networks. DigiTAC is used for both analog and 12kbit encryption. It never does decode the encryption; it simply keeps the timing correct so the output encryption transmission can be properly decrypted. ASTROTAC supports all the former in addition to ASTRO digital modulation. Each receiver type is available for either conventional or trunked communication networks. A good way to identify each type of receiver is the soft clicking at the end of the conversation. SpectraTAC networks have the most distinguishable sound.

In the event frequency reuse is not available due to picky frequency coordination, AMSS (Automatic Multiple Site Selection) or SmartZone can be used. AMSS does not seem to be installed anymore, though there are a few systems still being operated. Motorola may no longer market it due to SmartZone being the most profitable.

With AMSS each individual site is seen as an independent site and given its own external site number. Each site has its own central controller, though it operates in a remote configuration. Each controller is essentially connected to each other and cannot operate independently. A site can have any number of channels based on the needs of the network. One thing to keep in mind with these types of systems is how to handle sites that do not have an equal amount of channels. If one site has five channels, and is currently busy, yet another site has ten channels, and a subscriber wishes to talk on a group not currently in progress, you must choose how this is handled. You can either allow the call to be granted, which busy sites will miss, or you can have the call put into the busy queue while it waits for the other site(s) to become available.

There were no specific features available with AMSS. [Correct me if I am wrong.]

Moving up the network ladder we encounter SmartZone. SmartZone basically networks together all the trunked systems we have discussed so far including conventional repeaters. A SmartZone network is a network of multiple trunked systems, which are all linked together and controlled by a central point. As mentioned before, this central point is the Zone Controller.

SmartZone introduces a whole new slew of equipment. One significant piece of equipment is the Ambassador Electronics Bank [AEB]. The AEB is basically a switch. After the ZC determines which sites need which audio it instructs the AEB to open audio paths to each site.

Along with SmartZone came ASTRO. ASTRO is simply Motorola's form of digital voice transmission and the features that can be provided by

it. Keep in mind ASTRO is not restricted to SmartZone. A single site or Simulcast network can use ASTRO as long as each station is, of course, a Quantar, and particular conditions are met. The backplane of the Central Controller's cabinet is limited to a certain extent. An example of a limitation is the number of Simulcast sites.

With ASTRO and single site networks they must be configured with or without consoles, or with or without Simulcast. If you use Simulcast or Receiver Voting you cannot support consoles. If you want to allow for consoles you cannot Simulcast the network.

Back to SmartZone Another new product, which became available with SmartZone, was the IntelliRepeater [IR]. An IR is simply a hopped up Quantar that can perform the role of a central controller.

Traditional sites used a controller that utilized the 6809 microprocessor. With the IR, firmware enables the station to become a bare bones central controller. Considering this situation a site in a SmartZone network can either be an IR or a 6809 site. Note: IR sites do not support Simulcast. Also, VOC may or may not be limited to IR sites.

There are limits to the number of sites that are available on the network. The Zone Controller backplane has a total of sixty-four ports that can support a few different type of connections. They can be consoles, sites, business exchanges, etc. Most SmartZone networks will have consoles included in the network so the number of ports available for sites becomes reduced. Communication is via RS-232C I believe.

With the introduction of encryption, or ASTRO, to a SmartZone network very minimal hardware is needed unless consoles are to be used. Consoles have a wireline link to the SmartZone network and are simply routed audio directly from the site where it is received. Considering the network never decodes and demodulates the voice traffic extra hardware must be introduced to perform that feature for the console. For ASTRO decoding a DIU (Digital Interface Unit) is used. For analog 12kbit encryption, a CIU (Console Interface Unit) is used. (DIUs or CIUs were purely designed for consoles and communicate through a non-publicly documented protocol. You cannot simply purchase one to decrypt encryption, even if you have the key, or decode ASTRO traffic.)

Much of a SmartZone network is multiplexed. To mux and demux you use CEBs (Central Electronics Bank) and DBLs (Data Broadcast Link). Consoles are connected via CEBs. [Can anyone provide more info on CEBs or DBLs?]

For support of telephone interconnection the Motorola Business Exchange must be used for interfacing with a PBX or the PSTN.

There are a host of features that are available with SmartZone, some which are covered on another page. Otherwise, SmartZone networks are highly configurable and can accomplish most any organization's needs. Now if only certain administrators could figure out how to properly run them and maintain them. The SmartZone System Administrator's User Manual is nearly four inches thick, though a good read.

When you need an even larger coverage area, and larger site capacity, SmartZone OmniLink is utilized. OmniLink is an extension of SmartZone. It adds support for interconnecting up to three (Or is it four?) ZCs. In addition, there is the need to support roaming, where a radio from one zone roams onto another zone. Being each ZC has its own database of users and talkgroups there must be some form of communication and arrangement between ZCs. OmniLink supports up to 192 sites.

Got some info that Friendswood VFD has talkgroups on the STAR-Net system-ID 20016. They are using the Alvin site until Pearland goes online in late November.
They also have talkgroups on the Galveston County trunk system although they can barely get into the system.

Looks like Community VFD in Alief is planning to go to UHF
453.1875
453.5125
453.8375
All repeaters.
Tower locations are along FM 1093 and Alief Clodine Roads.
Guess they are trying to get away from STAR-Net.
Can they not get into the Clodine site?
Don't think they are going to like using 453.5125.
Houston is not using narrowband on 453.500 and they have multiple
transmitters in the city using anywhere from 360 to 600 watts ERP.

Topic: 249 Message: 3181

You guys! You see a new FCC entry and think it is really current. States take YEARS to update their various databases, and we know the feds don?t do much better. In the past, I?ve found the FCC database to be two years tardy. CVFD just went to Star-net within the last five years from VHF-Lo so I can?t see them affording to scrap that investment for a while. I think you?re seeing an artifact from an alternative that was rejected. Applying for licenses would?ve been the first step.

As for Cy-Fair, they?ve always been strange. :-)

Looks like Community VFD in Alief is planning to go to UHF
453.1875
453.5125
453.8375
All repeaters.
Tower locations are along FM 1093 and Alief Clodine Roads.
Guess they are trying to get away from STAR-Net.
Can they not get into the Clodine site?
Don't think they are going to like using 453.5125.
Houston is not using narrowband on 453.500 and they have multiple transmitters in the city using anywhere from 360 to 600 watts ERP.

3184. Re: Community VFD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-19 19:10:08 UTC
From: Erich
Topic: 249 Message: 3184

News Flash: Many VFD's don't like StarNet

Westlake is also shopping for UHF. The FCC Database is as up to date as I have ever seen it. Take the Audit for example. They sent letters out to everyone the ones that didn't reply are being sent letters that they could be losing their license soon. I have heard many of the departments that are on Star-Net not wanting to update their equipment to digital. The reason us "strange" people are going UHF is equipment availabilty, interoperability, cost, flexibility, and I can work on my repeaters (not to mention that I don't have to depend on Harris County to fix the problems with their system that they promised to fix long before everyone "came onboard". It is interesting how the priority list is situated when it comes to the Star-Net system. I think the County is just looking for a way to justify what they put up.

From: Myles Barkman
Topic: 3193 Message: 3193

Looks like Wharton County SO may be switching repeaters pairs.
They were using 155.010 as their output but looks like they are licensing a new repeater on 155.805 with 155.010 as the input.

Several small airports around the state are getting low-power 453 band freqs pt up. These appear to be data so I wonder if they control/monitor lights or ILS equipment.

The City of College Station is licensing a couple of new repeaters. Don't know if these are additions to their trunk system. 858.7625 and 860.2625.

Magnolia ISD is getting licensed on 151.070 and 151.085. These are both repeaters but there is only one freq listed for the input-159.015. Will have to see what goes up.

UT MD Anderson Cancer Center looks to be trying to get some repeaters on 453.225, 453.350, and 453.975.
This pretty much conflicts with Cy-Fair's new repeaters and one already-existing one.

Memorial Hermann Hospital security is either moving or adding to 451.925 MHz repeater.

Looks like someone is putting up a trunked radio system at Bush Airport for business operations. Most likely, this is for Continental Airlines.
935.900, 936.925, 936.4125, 936.950, 936.9625, 937.475, 939.4125
Don't know if this will be Motorola or EDACS.

Shriner's Hospital on 462.050.

Houston Community College on 464.650.

And this is just looking at mostly Harris County.

Wow you should be dispatch for IPN :)
You're faster and sometimes have more info than those guys.
I was told if you become a dispatcher, you get a free membership as long
as you contributed to the list. Might want to give it a try if you
want :)

LOL!

Yeah, he'd make a good dispatcher typing in all
streets with the wrong spelling. Every message has a
spelling error. He's trying to be the first to get the
information out...must have gotten a new scanner
today.

> CVFD just went to Star-net within the last five years from VHF-Lo
so I can't see them affording to scrap that investment for a while.

Actually, they went to the Pasadena 800 system until HC SmartNet
went on line. Then they switched to the Harris County System. They
kept the VHF Low Band frequency for their pagers (there is about a 5
second delay between what is heard on 800 and LB).

But, the switch to UHF seems to be common around Harris County. I
suppose, besides the cost of 800 MHz radios, the VFDs need to be
able to communicate during mutual aid situations.

Happy Scanning.

I left for a few hours and look what happens.
JUST SAY NO!
Is it a full moon and a Saturday night?
Please review the description of this list:
"For radio scanner enthusiasts in and around the Houston, Texas area.
Posting of frequencies and certain *hot* channels when there is something
big happening (use discretion)."

Check this message out this message from Erich from July 10th.
Myles,

I am going to create a new group so that we can keep the chatter down and
let only be for interesting dispatches/alerts. I will add the Houston Scan
email address so all information is forwarded to your list as well. I think
it is a great idea to leave it on your list also. I have not started one of
these groups so bear with me on the set up process. I have to go do some
work but I will get on it tonight.

Erich

The group was going to be named HoustonAreaDispatch@yahoogroups.com.
I don't see it so I don't know if he created it or not.
I see a need for it NOW!
I'll even make it if someone wants. Just don't be surprised if I don't
elect to get the emails.
Just take a deep breath, Beavis, and put the sugar down!

3249. Dispatches

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-20 03:30:10 UTC
From: HouScan@webtv.net
Topic: 3249 Message: 3249

Record King,

I'm going to have to go to "digest" if you keep going. You might want
join Houston Area Dispatch at hou_disp@Yahoo groups
& put your dispatches out on there. I think thats what the owner of that
group had in mind. Usually on this group, we only post major incidents
like the 2-11 fire earlier today.
Of coarse, you can do what you want unless the moderator says
differently.

Dan

Peace~out

Here's some findings from the little trip I made. Like I said, I left for a few hours. I went down to Angleton and Freeport to do a little intelligence work.
One thing I found that I didn't even expect to look for was the origin of the transmissions I talked about on Sept.13th.
I heard 164.375 and 164.225 very strong in Freeport. This time I knew it wasn't just a band opening. I still had no clue who could be using federal freqs down there. There was regular activity but it sounded like the kind of crap you hear at the plants in Pasadena-playing with valves, pressure, etc.
So were these bootlegging refinery folks? I heard other strange stuff down there like Vietnamese fishing guys on 142.000 MHz and possible Navy scramble on 155.350 MHz. So close to international waters, maybe everyone considers this place no-man's land for free radio.

It wasn't until I got back and did a little Google search that it all comes clear.

The US has an oil reserve stockpile near Freeport in an area called Bryan Mound. There are several along the Gulf Coast stored under massive salt domes in case we have our regular imports of oil cut off for some reason, we won't be totally stuck like Chuck.
But when you try to find information from the horse's mouth on any of these areas, this is what you get now:
http://www.fe.doe.gov/spr/spr_security.shtml
You can look at this site and get some info about them in general though:
http://www.fe.doe.gov/spr/index.shtml
The rest of the stuff I found will be included in my Houston area frequency list in a little while. I've been making quite a few updates to it so check it out.

From: Myles Barkman
Topic: 3251 Message: 3251

Sounds like a mess just south of Pasadena near Allen-Genoa and Genoa-Red Bluff.
HFD is out on Haynesworth and Old Genoa Red Bluff on some sort of fire with a lot of units.
I haven't been able to hear what it is on fire but I don't think there is much in that area.
I can find the landfill and nearby is a wood recycling place. Address given for incident is 5800 Haynesworth but I can't locate a business for that address.
They are requesting a couple of more pumpers now.
Ops on A4 453.950 MHz.
They just called for 517. Station 17 is near downtown on Navigation. Quite a ways off.

Community just applied for the UHF frequencies, They do not like star net.
Seems the Clodine site has some bad channels and HC does not seem to want to
fix them. They are going to move to UHF in the near furture.

Looks like Community VFD in Alief is planning to go to UHF
453.1875

453.5125
453.8375
All repeaters.
Tower locations are along FM 1093 and Alief Clodine Roads.
Guess they are trying to get away from STAR-Net.
Can they not get into the Clodine site?
Don't think they are going to like using 453.5125.
Houston is not using narrowband on 453.500 and they have multiple
transmitters in the city using anywhere from 360 to 600 watts ERP.

That's what mystifies me. If you want inter-agency communication, doing it conventionally is so much tougher. Each and every radio must be programmed for whomever you need to speak with. One of trunking's selling points has been the ability to dynamically link talkgroups during emergencies. Supposedly, one call makes it happen.

so I can't see them affording to scrap that investment for a while.

Actually, they went to the Pasadena 800 system until HC SmartNet went on line. Then they switched to the Harris County System. They kept the VHF Low Band frequency for their pagers (there is about a 5 second delay between what is heard on 800 and LB).

But, the switch to UHF seems to be common around Harris County. I suppose, besides the cost of 800 MHz radios, the VFDs need to be able to communicate during mutual aid situations.

Happy Scanning.

How true!!! When I worked for Gulf States Util in Conroe, the attitude when I went to work there was "we dont buy Japanese radios; only good quality Motorola and GEs"....within five years of me being there, we had started to use Midland Syntech II LMR Radios with the rptr options (we were on 48MHz lowband and HTs there do NOT work well). With the UHF HTs in hand and the mobile rptrs, the line crews LOVED them and coverage was great! My bosses attitudes had changed greatly in that time :)

Later when Entergy bought GSU, it was all switched to Motorola Smart-Zone...because of the lateness of system coming on line near Houston, cochannel interference is terrible and out of 10 channels we started with at the main Conroe site, they are down to 6 at last count!

In fact the Conroe channels were on P/S freqs; thanks to a Egr-Planning group at GSU, they had gotten licenses on 800MHz but no money had been allocated to build out. The channels in Conroe were somewhat of a stickler and had to stay EXACTLY as they were licensed...which meant a short tower and poor coverage in the Woodlands...pity as we had planned to move them to a new 400ft tower at the Svc Ctr on the north side of town.....(RATS! I was hoping that tower would be built :)
Of course, the channels filled up quite rapidly because of Houston (3 were totally unusable and one went to mobile data...another waste! The LOWBAND freqs could have done that!)....

NOW I understand they are looking at vehicular rptrs again!
This time though NOT from Motorola....their cost is wayyy too much...probably Pyramid or someone else...
AND EF Johnson makes a HT for the SZ system hundreds cheaper than the MTS2000 and it WORKS better (is smaller too!)

Luckily I got some of the Midland stuff when it was removed...made great 6mtr FM rigs :) (plus a couple of base stations too....now to nail down some sites for a good 6mtr rptr system with voter and multi rcvrs!)

3262. RE: [HoustonScan] What type of stuff to u want me to report about

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-20 17:28:11 UTC
From: Scott Royall
Topic: 3218 Message: 3262

How about remembering that most of us are listening already to the channels
we're interested in?

From: Erich
Topic: 249 Message: 3264

That is what a lot of the star-net was built on, "theory"
and "supposed to." It is hard to use for interagency operations when
nobody is on it. The cost to get in the system is unbelieveable. What
I don't understand, does the Sherrifs Department and all of the
Constables and Fire Marshal pay for air time or for the radios to be
installed? I wouldn't think so. One would think that one division
would simply make a requisiton for the additional radios and air time
because it is all county dollars. IF that is the case then they
shouldn't be charging the fire departments for the radios or the air
time seeing as how they are spending money they get from the Harris
County ESD's or RFPD's. I think if Harris County allowed the fire
departments/ESD's to use the system for free then you would see more
users on the system. I personally don't think the system has enough
tower sites and/or is not being managed correctly. I am not really
sure what the problem is or how it would be fixed.

The county gets a large grant from the feds every
year. That is why they have all these great "toys".

3266. more Brazoria County findings

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-20 18:40:19 UTC
From: Myles Barkman
Topic: 3266 Message: 3266

Here's some more stuff I found out on my quest.
The new STAR-Net site is up and running down there.
The site is supposedly just Northwest of Brazoria off Highway 36.
I was hearing it in Angleton and Freeport. Heard Angleton PD, Rosenberg PD, and Brazoria Co SO.
Interestingly, I also heard West Harris County EMS.
Freqs used on the system were
866.475,867.225,867.725,867.975,868.075,868.475,868.900,868.9625

I did not hear 868.5125 being used. Control channel was 867.725 MHz.
The Brazoria County trunk is also still up and running.

Found that West Columbia PD changed PL on their 155.055 MHz repeater-now 156.7 Hz.
Anyone know if these freqs are still being used:
460.2875 Brazoria PD PL 141.3
453.700 Brazoria PD PL 141.3
453.8625 City of West Columbia PL 156.7
866.3375 Brazoria Co SO PL 156.7
453.075 Jones Creek VFD PL 141.3
453.125 Old Ocean VFD PL 141.3?
453.350 Wild Peach VFD PL 141.3?
155.325 Central EMS West Columbia PL 100.0
453.175 Sweeny Community Hospital PL 141.3
155.745 Sweeny PD
453.375 Brazoria Co Conservation & Reclamation

Many of these agencies may have gone to the trunk system.

Found one really interesting repeater around Angleton.
154.570 with 159.570 input DPL 311 sound like it is used at one of the State Prisons or some other Jail.
Not licensed in the FCC database. I'm wondering if it could be the Scott Unit.

How many folks we got on the list from down there?

Noticed that one of the Saltgrass link repeaters on 147.340 was not working.
Not a lot of amateur repeaters in range of Freeport. The one Freeport repeater I knew of was also not working on 147.380 MHz.

I think the state prisons are using more freqs down there than my list shows but I didn't spend time trying to figure those out. I'm not into listening to that stuff anyhow.

If anyone down there can fill in the holes or provide additional information about these or other frequencies, COME ON DOWN!

Now we get to the heart of the matter, theory vs reality. My sense is that the right people in Harris County don't really understand what they have. The issues surrounding a trunked system are quite different in some ways from conventional radio. The admins almost have to think more like a cellular provider, and that's a big hill for government-types to climb. No, I don't think Star-Net should be free, because you want to discourage the type of abuse that agencies like Animal Control sometimes indulge in. However, emergency services groups should be getting ridiculous discounts.

As for the Clodine site, just look where it is. Most truly HC agencies aren't heavily dependent on it so of course it's a red-headed step-child. The needs of CVFD are quite specific, and they need to speak up about them! The problems the VFDs are having are somewhat due to their limited visibility county-wide. If the VFDs showed up in force at a few Commissioners' Court meetings, their problems would get addressed pretty quickly. Not that the commissioners would understand the problems, they just wouldn't want to be accused of denying their own constituents good fire protection.

No, going to 453 MHz is a bad idea. Just ask HFD. And, just how many frequencies can LifeFlight cover??

3272. RE: [HoustonScan] Re: Community VFD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-20 22:13:30 UTC
From: eburrer@houston.rr.com
Topic: 249 Message: 3272

I guess I would need to hear why 453 is a bad idea? We don't have the problems that HFD has. Anyone who puts there status messaging on the same frequency as their primary dispatch frequency is on crack. UHF works very well for our needs now and in the future. The cops don't want to talk to us and we really don't care to talk to them. Heck most of the cops that do want to talk to us purchased HT's and say they like our radio system much better than the county system.

Erich

Looks like Community VFD in Alief is planning to go to UHF
453.1875
453.5125
453.8375
All repeaters.
Tower locations are along FM 1093 and Alief Clodine Roads.
Guess they are trying to get away from STAR-Net.
Can they not get into the Clodine site?
Don't think they are going to like using 453.5125.
Houston is not using narrowband on 453.500 and they have multiple transmitters in the city using anywhere from 360 to 600 watts ERP.

That's a fair question deserving a detailed answer. As someone depending on CVFD Station 1, paying the extra $4/month on his MUD bill, and with about 25 years of using VHF/UHF, I have a certain level of interest, and would welcome the opportunity to discuss the matter with you in person. For now, I offer these thoughts:
* HTs are inefficient RF radiators by their nature, and firefighters frequently work in conditions that further erode signals. It's also a truism that all radio sites have dead spots even inside their intended target areas. If I'm a firefighter battling a fire inside an office building, and a chunk of ceiling lands on me, I darn sure want as many receivers looking at me from as many widely different angles as possible. I'm not offended if Ft. Bend or West Houston happens to see my tiny signal better at that instant than Clodine does. As long as that central computer does its job and relays my distress call, I'm in mad love with my $100/month radio!
* There's a grim corollary to the above. We were harshly reminded last year just how much the FDs are in the disaster business. As NYFDs expensive single-point comm.. system all but cashed out, the much-maligned cellular system stuck it out. Yes, it was critically overloaded, but it actually coped with losing a number of major nodes with more grace than even its designers dared hope for. If that fails to impress the value of distributed communications upon emergency planners, abandon ye all hope. :/ It doesn't matter how great those 453 repeaters are if the site is down. Working direct on 453 would be a really risky venture.
* There's also the political reality that the FCC is under intense pressure to release vast tracts of the RF spectrum for private use, especially 445-470 MHz. That pressure grows daily, explaining why the FCC supports trunking. It's a voluntary switch at present, but that's bound to change and even mighty Houston can ignore Uncle Charlie too long. Imagine what the fees will be to join a trunk system after they are mandated.
By the way, let's not discuss HFD. We're in agreement that their communications planners need to leave the ropes on the trucks instead of smoking them!

Subject: RE: [HoustonScan] Re: Community VFD

I guess I would need to hear why 453 is a bad idea? We don't have the problems that HFD has. Anyone who puts there status messaging on the same frequency as their primary dispatch frequency is on crack. UHF works very

well for our needs now and in the future. The cops don't want to talk to us and we really don't care to talk to them. Heck most of the cops that do want to talk to us purchased HT's and say they like our radio system much better than the county system.

Erich

To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] Re: Community VFD

Now we get to the heart of the matter, theory vs reality. My sense is that the right people in Harris County don't really understand what they have. The issues surrounding a trunked system are quite different in some ways from conventional radio. The admins almost have to think more like a cellular provider, and that's a big hill for government-types to climb. No, I don't think Star-Net should be free, because you want to discourage the type of abuse that agencies like Animal Control sometimes indulge in. However, emergency services groups should be getting ridiculous discounts.

As for the Clodine site, just look where it is. Most truly HC agencies aren't heavily dependent on it so of course it's a red-headed step-child. The needs of CVFD are quite specific, and they need to speak up about them! The problems the VFDs are having are somewhat due to their limited visibility county-wide. If the VFDs showed up in force at a few Commissioners' Court meetings, their problems would get addressed pretty quickly. Not that the commissioners would understand the problems, they just wouldn't want to be accused of denying their own constituents good fire protection.

No, going to 453 MHz is a bad idea. Just ask HFD. And, just how many frequencies can LifeFlight cover??

Subject: [HoustonScan] Re: Community VFD

That is what a lot of the star-net was built on, "theory" and "supposed to." It is hard to use for interagency operations when nobody is on it. The cost to get in the system is unbelieveable. What I don't understand, does the Sherrifs Department and all of the Constables and Fire Marshal pay for air time or for the radios to be installed? I wouldn't think so. One would think that one division

would simply make a requisiton for the additional radios and air time because it is all county dollars. IF that is the case then they shouldn't be charging the fire departments for the radios or the air time seeing as how they are spending money they get from the Harris County ESD's or RFPD's. I think if Harris County allowed the fire departments/ESD's to use the system for free then you would see more users on the system. I personally don't think the system has enough tower sites and/or is not being managed correctly. I am not really sure what the problem is or how it would be fixed.

3300. Chinese President Visit

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-22 02:21:41 UTC
From: Myles Barkman
Topic: 3300 Message: 3300

The Chinese President will be arriving in Houston from Chicago on Wednesday.
Thursday, he will head up to College Station to tour the Bush Library and
Museum Center.
Friday, he will visit Bush at his Crawford home for half a day before going
to Mexico City.

Most likely, he'll fly into Ellington like most big wigs do.
After that, I really don't know how they'll go to College Station and
Crawford. Road trip? Helicopters? Fixed wing?

Anyway, check these freqs for activity:
409.625 State dept. repeater
407.600 State dept. simplex
408.600 State dept. simplex tactical
165.7875 Secret Service "Baker" VIP security
165.375 Secret Service "Charlie" command post
165.2125 Secret Service "Mike" Dignitary protection
164.650 Secret Service "Tango" commonly used
34.350 VIP transport net

Of course, many of these freqs, if used, could be scrambled.
Sometimes, it's best to stick to things like HPD which does not scramble
anything.
460.400 is used for VIP detail
460.350 may be used for traffic detail
460.425 may be used
460.225 may be used

Hello,

I have a Winradio 1550E and was scanning up in the 1572.0 Mhz range
and came across several frequencies that seem to be FD freqs.
Yes, that's right 1.5 Ghz. I haven't been able to determine if these are
images or for real in use frequencies so I wanted to throw this out
there and see if anyone else can maybe take a little time and
scan around and see what you pick up in this range. I was scanning
between 1572.0 Mhz and 1573.0 Mhz.

MONTGOMERY COUNTY IS A EDACS SYSTEM. SO AS LONG AS IT SCANS EDACS
IT SHOULD. GO TO THE LINKS PAGE AND LOOK FOR MYLES'S SITE. IT HAS
ALL THE MO.CO INFO.

the pro 91 trunk tracker will only track type I & II 800
systems. you will need a 92 or better, montgomery co uses edacs

my guess is that they are relay stations like the salt grass network
sends the signal along the path to the main repeaters or base
stations. next time you drive by a station l;ook on the tower for a
microwave anntenna dish i bet there is one there.

so what you are hearing is the retransmission of the signal being
sent along its way. that would be about the right freq for that kind of work.

That's kind of what I'm thinking is that it could be a link.
I don't have anything that can listen up there and I'm not all familiar with landline and microwave links for 2-way radio systems.
Here's my understanding on how the links work (at least on landline).
When the dispatcher talks or a mobile talks, a tone rides on the signal (sort of like a PL but very audible) to let the repeater know to key up and send the audio. The specific tone is filtered out.
This may have something to do with why the HPD link on the STAR-Net system has that annoying tone on it. It's being tapped into the link and the tone is not being notched out.
I think microwave links must be the same where the microwave signal is constantly there and you occasionally hear audio. Don't know if tones are used.
Someone else come in here and correct my link theory here.

Regardless, we should be able to look up this stuff in the FCC database. I know HFD has microwave links to every station but never really cared what freq they used.
Maybe we can start there...

1.5Ghz is I THINK in the Mobile Sat freq range??..I dont think its fixed microwave (the 1.8GHz band has been pretty well sold to the PCS guys)...but no FDs up that high! :)

Probably an image..that will depend on the scanner and its 1st IF..

Here's some microwave stuff Houston uses (for what, I dunno): All in MHz
23125
21925
2475.0625 (this shows to be used by PD. Think this may be what Fox uses to transmit pix to Transtar???)
952.18125
957.8
956.9
957.5
958.2
957.1
12530
These last 6 are used by PD apparently. Could be from the HPD building.

I see nothing in the database for 1572 MHz.

23 and 21 Ghz are short haul bypass microwave...

I think 2475 is in the ENG or TSL Microwave for video use range.

The 95x channels are usually telemetry or data/SCADA use...In Dallas one of the high channels at 958.xxx was next door to a STL channel one of my FMs used....it was TXU who was the user....and the STL path was RIGHT across their power plant...luckily they never bothered us..or us them! :) GSU in Conroe used to use them also...928.xxx one way and 952.xxx back...but those units are offline and have been abandoned AFAIK.

You can also hear Conroe FD on
154.1900 ch1
154.2500 ch2
154.3250 ch3
158.8200 MC fire chiefs association.
Hope this helps. Ther are also several other fire dept freqs that I found on Myles' site. As far as trunking though, you need the EDACS capability.

Actually, I've made a couple of changes to that now.
You can still hear Conroe FD channel 1 on 154.190 MHz but I don't think
their other VHF repeaters are used by FD anymore.
The old channel 2 may be used for OEM.
158.820 is called "countywide fire" or something like that.
It used to be tied into 154.190 but no more.
It is used as a common channel for all the VFDs or something.

From the Houston Chronicle (Website):

Itinerary:
Today:
☐ Arrives Ellington Field 11:25 a.m. <---------- **
☐ Johnson Space Center.
☐ Dinner at Intercontinental Hotel.

Thursday:
☐ Speaks at George Bush Presidential Library and Museum at Texas
A&M
University in College Station.

Friday:
☐ Meets President Bush at his ranch in Crawford, near Waco.
☐ Leaves for Mexico.
==========

** I wouldn't be surprised if they altered the actual landing time
for security reasons.

3318. Montgomery County FD's (Formerly: Conroe FD)

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-23 16:16:07 UTC
From: Rusty Caufield - Work
Topic: 3302 Message: 3318

Montgomery County:
(Dept # is the County Fire Department #, as well as the first part of the Department Radio Numbers, or the Chiefs Radio Numbers. i.e.: Engine 91 is N. MC VFD engine 1, #9 is Chief of Dept 9)

1. Dept's on Conroe FD's EDACS Talk group:
Conroe FD (Dept 1)
Magnolia Bend VFD (Dept 8)
River Plantation VFD (Dept 17)
**Talk Group Linked to 154.190 (pl 146.2), Each has there own "Ch3" Talk Group.

2. Dept's on County Fire Chiefs VHF (158.820, 107.2)
Cut 'n Shoot (Dept 2)
Lake Conroe (Dept 3)
Grangerland (Dept 4)
Montgomery (Dept 5)
Needham Road (Dept 6)
Bennette Estates (Dept 7)
N. MC VFD (Willis) (Dept 9)
S. MC VFD (Rayford/Sawdust Area) (Dept 11)
Porter (Dept 12)
New Caney (Dept 15)
Splendora (Dept 16)
Magnolia (Dept 18)
** Each has there own Simplex "Freq 3", Except Magnolia has a repeater.
***Ch 2 for all County dept's is "MedTac 2" (155.400, 146.2) Tied to the EDACS Talk Group w/ Same Name. Used for Medical Responses w/ the EMS

3. Dept's on Woodlands Fire Dept. VHF (155.040, 100.0)
Woodlands FD (Dept 10)
Timberlake's VFD (Dept 14)
** Woodlands has a CH 2 (154.965, 146.2) and Timberlake's has a Simplex "Freq 3"

I don't know what kind of range to expect from these repeaters, but if you're in the Galleria area you shouldn't have any problem hearing them.

451.85 R [d 703] Inter-Continental Hotel - Catering
461.2 R [d 712] Inter-Continental Hotel - Information Technology
461.8 R [d 723] Inter-Continental Hotel - Housekeeping
463.35 R [d 732] Inter-Continental Hotel - Engineering

These are also licensed by the hotel but I've been unable to verify them in use: 462.35R, 463.9R, 464.275R

From: Myles Barkman
Topic: 3319 Message: 3321

Here's what I've caught today:
409.625 State Dept. repeater
408.050 Johnson Space Center Hospitality
165.7875 Secret Service "Baker" in the clear
165.2125 Secret Service "Mike" encrypted
460.400 HPD VIP detail
460.425 HPD "Command Post:" Ops
460.450 HPD Escort ops/helicopter
460.525 HPD Overpass detail
463.350 Inter-Continental Hotel ops

I hear HPD referring to "Solo" units. These apparently stop on-coming
traffic from getting on the freeway on-ramps when the escort approaches.
Anyone touch on that subject?

The escort is on I-45 leaving Nasa going back to Hotel.
Trying to catch some comms as they go by.

3322. AP Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-24 00:04:13 UTC
From: celticstorm333
Topic: 3322 Message: 3322

I used to work at a college radio station that had an old AP Wire printer. The information was very different from what comes out on wire.ap.org (and much faster). Does anyone know if the old format of the information is available on the web? Or available in other ways (preferably free!)?

Thank you ahead of time,

I lucked out on finding that same engineering freq during lunch today. They were getting elevators ready at the ground floor that would only stop at floors above 14 or at 14 or something like that. This just minutes before he arrived at the hotel.
I could hear the 463.350 repeater from Mykawa and loop 610 but when I started driving home, it was very hard to hear so that might give some indication of range.
Wish I knew about the other hotel freqs. Didn't do my homework. :)

3324. Re: Chinese President

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-24 02:33:02 UTC
From: celticstorm333
Topic: 3319 Message: 3324

Can add that I suspect a local person is in the motorcade calling the shots on lane changes and also calling units to "cut traffic". Command seemed to handle the helicopter, sending them out to check on the traffic situation. A lot of attention was being paid to any vehicles parked on the side of the road along the route with vehicles being cleared before the motorcade passed. Were even concerned with HOV traffic this afternoon.

Noticed some lack of coordination with the officers on the west side concerning which way the motorcade was coming in from the airport to the hotel and on who was supposed to be where. Also problems with people being relieved and irate drivers (civilians).

Had a scare earlier with "a package without a guest". Told
to hold
off on bomb squad, CID was handling it. Also had a problem with a United Airlines Pilot.

Also had people on the 12, 22 & 23rd floors (23 had roof access)

Haven't heard much from the Feds....mostly ETAs

Here are the frequencies that I got hits on this morning:

409.625 Fed ☐ Kominsky, wheels down, switch to Talk Around (when
they arrived at hotel).

165.7900 Fed ☐ Kelly to transport, etc.etc.

460.350 HPD

460.425 HPD Command Post, also had other (radio) traffic cutting in obviously from other City dispatchers, seemed to be the lead on traffic coordination. I believe this was used as Channel 5.

460.225 HPD ☐ Possibly Ch10 Used for Command to Fox after having
problems getting through to Fox because of radio traffic.

These last three had a lot of the same traffic going out on all three.

Hope this helps.

The hotel freqs below are active. Also add 462.35 R [d 731] and 463.9 R [d 734] both with elevator control ops. Activity also noted on:

409.625 DSS motorcade
460.225 HPD
460.4 HPD
460.425 HPD
164.4 USSS "Papa" clear
165.2125 USSS "Mike" encrypted
165.375 USSS "Charlie" encrypted
165.7875 USSS "Baker" clear (former Pres. Bush attended)

Secret Service noted talking to the hotel staff on 463.35 hotel repeater.

I've been noticing occasionally that SHPD and PPD will work together on some stake-outs. I would imagine this is because they border each other and they would be prepared for the subject to cross city lines. Then again, maybe not.

I am going to try in the morning to go to the Pilot Meeting and get the air boss freq. Once I have it I will call Myles and have him post it tomorrow.

There will be a UHF repeater for HAM radio use on 441.825 tone 123 (Thank you AK5G). This will run as long as the truck battery will last.

The air show personal are using Brown and Root handhelds but on direct. (I think after hearing one of them talking to another person face to face and saying that they wont reach from one end of the field to the other.)

Look for the HAMS that work the show in the VHF ham simplex band.(Sorry I can not give that out) There will also be a net for Medical, Fuel, and Finance. All on different frequencies. I think just about covers it. I will check in the morning before leaving the house for any more question.

Watch or listen to your local media outlets. Airshow staff will release the info there.
Dwayne
ps.
airboss 119.600 or 124.500
Ellington tower 126.05 or 253.5 Please do not use transceivers that can transmit on airband at show. This will stop the show until interference can be cleared up.

Ham UHF repeater 441.825 tone 123.0

Looks like rain CAN cancel the event. What good is it to have it if you can't see the planes from the low cloud ceiling anyway?
Sunday is still a go.
I'll have some frequencies to post later.
If you go, bring some shoes you don't care too much about or can easily wash!

My sources (FCC records) show them to be licensed for 157.485 MHz. Whether
or not they are using this, I don't know. Never listened to them before.
If I hear them, I'll relay the PL.

Got your voice mail. Had the phone off so I could recharge it. Took the day off so I've been trying to look for freqs.
Did they actually use the air boss freq(s) today?
I scanned the air band a few times and didn't hear anything out of the ordinary.
I haven't been able to hear the mobile repeater but then I guess it won't go up until Sunday morning.
FYI, Southwest Services has a new repeater up on 451.825 with DPL 731. You may or may not know they are a private business that sells fuel and takes care of parking arrangements for planes. Range is probably not that great but I can hear it just fine just 3 miles from the field.

3349. Fw: Texas Renissance Festival Freqs.

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-26 05:38:57 UTC
From: Joshua Carroll
Topic: 3349 Message: 3349

Anybody else have any frequencies that I should monitor while at the Ren Fest on Nov 3 and 10th? :) I'll try to break away from the wife and scan myself, but has anyone else had a chance to scan while over there. I have Myles' list, just wondered if there was anything else?

Thanks

Thanks but I have that list, plus I'll be using FRS radios (7 of them in fact with the party I'll be going with Nov 3 and a seperate group on the 10th).

I'm saying like the security in the park area and in case there is a medical or fire emergency.

Yes Myles I'm glad I chose the 3rd and 10th because I figured it was going to be rainy the end of October (dabble in weather as well as scanners) :)

From: Myles Barkman
Topic: 3354 Message: 3354

For those of you on the list NOT in this area, let me tell you what is about to happen here.
Interestingly enough, we are about to feel the impact of a Pacific hurricane.
This thing became a CAT 5, made landfall as a CAT 4 and was obliterated to a tropical depression as it was shredded by the mountains of western Mexico.
Thing is, all the moisture from the storm is being swiftly carried into Texas through a jet stream.
Southeast Texas has already been dealing with flooding due to rains every day this past week.
Yesterday was particularly bad for many areas around Houston, especially southeast Harris County area.

I feel sorry for the folks in Pearland who still have a couple of feet of water sitting on some city streets and probably some yards.
I see now why the airshow staff decided to cancel tomorrow's (Saturday) event.
Good day to stay indoors as long as the water stays outdoors.
Been sprinkling here for awhile now but if you look at the radar, you will see the train coming.
Let's just hope some of that heavy stuff south of Corpus stays offshore.
This should take us to our yearly rainfall total average (or more).

3356. [HoustonScan] when it rains, it floods

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-26 06:27:44 UTC
From: Joshua Carroll
Topic: 3356 Message: 3356

Looks to be a pretty nasty situation for the Gulf coast region.
Kenna's remnants have been moving north East-Northeast, with still
a center of circulation. If this emerges over the Gulf, it will possibly acquire
tropical characteristics (for a short while at least) and could be Marco (not sure
if they rename the storm because it's now in the Atlantic basin, having a debate
on another board about that.)

It doesn't matter what it's called Kenna-Marco will prove to be a very nasty
system if an Allison scenario develops. The ground is so saturated right now that
if it sprinkles it can flood. And if that low pressure system and cold front don't get out
of here quick enough, Kenna-Marco will move north THEN be pushed back south.
A couple surface models have the front stalling over the coast, which would halt that Low
in west Texas and just drag in that moisure and squeeze it out (basically, an Allison
situation). God forbid that happens.

Hopefully I'm wrong :)

no air boss.
Repeater was up but it uses a mobile antenna on top of the truck and a
duplexer inside the truck Range is short because of that plus it was
off after 10 am because we had left the field.

The airshow may be a bust today but there is some unrelated activity buzzing around.
A KC-135 with 8 F-16s are departing.
Check out the 140 MHz air-air channels.

Also add 289.400 MHz to the airshow freq list for UHF airboss.

More to follow later...

We might have gotten out of this deluge after all.
I see what must be the center of circulation, if you can call it that, near McAllen. It will soon be over the waters of the Gulf.
There is little to no convection left with the storm as seen with the lightning data. Just some spots of heavier precip.

Forecast appears to keep worst stuff right off or right along the coast so it might just skip by.

Joshua, as far as storm name changes go, I've looked into the tracks histories for as long as I've been around and here are a few:
This is the last one that occurred http://www.nhc.noaa.gov/1996douglas.html
Look in this list where it talks about "Meandering Hurricanes". Goes back to 1949.
http://www.geocities.com/blease.geo/hurricane.html
Looks like at least two Pacific-borne storms crossed over and became Atlantic storms.
One was in 1989 when Cosme became (a different) Allison.
The other in 1949, before they had names.
Check out the history of Cosme and Allison here where it discusses the impact on Houston: (bottom of article)

Oh yeah, one more frequency for the airshow.
They have a low-power AM station out there so when you are driving
up/waiting in line you can listen to special announcements. It is all
pre-recorded info.
It operates on 1620 kHz and gets out rather well. Think it must have about
a 5 mile radius at least.

I'm going through my bouncing membership list one by one trying to reactivate accounts that have been disabled by yahoogroups for one reason or another.
Some of these reasons are:
-Mailbox is full. Empty out your email inbox on your server. This appears mainly in Yahoo.com accounts.

-Account does not exist. You changed usernames or ISPs and did not unsubscribe with the old account. If you can, delete these yourself as I don't want to delete something that may be valid by accident. If you know of an account that you left on here that you don't use, tell me what it was so I can delete it myself.

-Mailbox unavailable. This is vague. Don't know what the problem is here.

-Account has been disabled or discontinued. Also vague.

-Not our customer. I assume this is the same as account does not exist.

-Mail refused. Many of these are coming from roadrunner accounts. See below.

RecordKing, you have had 5196 bounces as recorded by Yahoogroups. The last bounce message said you exceeded storage allocation. Delete some mail from your inbox or transfer them to a local folder using Microsoft Outlook Express or something.

I have 68 accounts I'm manually trying to reactivate. You will receive an email from Yahoogroups that you must reply to so it will change your account status to active. I had to do this the other day for myself.

Roadrunner (rr.com) accounts were rejecting Yahoo emails because of some security issue. I think everyone that has an rr.com account had to be reactivated.

Looks like lots of AOL issues with mailbox not found. I'm guessing you got rid of your account or changed your username. If there is some other problem going on with AOL causing this, please let me know.

You will not receive emails from Yahoogroups until you reactivate your account. Which means if you haven't, the only way you will see this message is by using your web browser and going to the Yahoogroups website to read the emails you have missed.
I hope some of you are doing that.

On a very few accounts, I was able to reactivate them manually because the last automated request that was sent by Yahoogroups did not bounce so it figures the account is valid.

Myles,
Re: E517 responding to Haynesworth Rd fire.
Just an FYI speculation. During multiple alarm fires the dispatchers often relocate units to some empty firehouses so that large areas will not be left without coverage. When 2 units of the same kind are quartered in the same station (as with 17's), its logical to send one of these to "back-in." If that unit is subsequently dispatched on a run, they use there own number. Sending units to relocated is usually done over the FD phone system so you usually won't hear it. It just shows up with some company being dispatched to some wierd location, far from their station. My guess is that E517 wouldn't normally respond to Haysworth until late in the 5th or in the 6th alarm.
Also, saw your recent post on bouncing e-mails. Doesn't effect me but, again, I appreciate all your work in keeping the site going. Hope you folks are getting through the rain OK.

Scott,
Thanks for your very lucid commnets on the merits of various radio systems. As a firefighter (in rural Ohio) with many firends on urban departments, I have found the entire discussion on the Site interesting.
I do have one point of disagreement. You said that FDNY's single point communication system "cashed in." That was not my impression from news accounts, audio, and transcripts. It appears the dispatchers stayed on the air throughout the event and were able to communicate with mobiles other than some interruptions right at ground zero. There were communications failures but these were primarily 1) trouble talking to units actually in the trade center building-the problems encountered everywhere in radio communication in high rises 2) problems re-establishing contact with units at "ground Zero" after the collapses. Part of this was the dispatchers following protocol and trying to reach the Command Post, which was unfortunately destroyed. It was probably a while before any units at "Zero" got themselves together enough to get on the right frequency to talk to the dispatcher. As I once heard a Houston Captain tell the dispatcher under infinitely less tragic circumstances, "Ain't got time to talk." There was of course at points a huge amount of radio traffic but I'm not sure that a trunked system or more frequencies would have helped that, absent other infrastructure, such as more dispatchers.
The floods in Houston, June, 2001, do support your point somewhat. It was my impression that the Harris co trunked system stayed mostly on the air while HFD's UHF radio system went compltely off the air and HPD's mostly crashed. Not sure how cell phones performed. The communications fiasco received only passing mention in the press and even less attention or commnet from city officials. It's impossible to know if the problem was related to inherent flaws in the design of the system or to human error during the emergency (for example, one rumor that floated aorund is that the back-up generator at the fire alarm building ran out of fuel. I have no idea if this is true.).
I'm interested in other comments from you and others.
Thanks,
Joe Gay

programming control channel only:
press menu, go to trunk data #3then press E. select select the bank
you want the system in press E. select trunk type press E,
selecttype I or type II press E. then using the up & down keys go to
ctrl ch only press E.then choose a plan 1-4 (i get good reception
with 2, but you can experiment to see witch one works best for you
then enter the control channel, make sure its trunked. (remember
the control channel changes SOMETIMES)

3375. Re: [HoustonScan] Pasadena Wrecker Association?

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-28 14:51:24 UTC
From: Joshua Wallace
Topic: 3329 Message: 3375

The Pasadena Wrecker Association is using 900 MHz trunking. They were on the 7e31 system but moved when it was taken off the air. They may be on the Houston 900 Network system now. On the old system, the PWA had a talkgroup that dispatched the Pasadena PD callout list, and each member company (Cernosek, A&H, Allens, etc.) had their own pair of talkgroups.
Myles Barkman <kg5ai@...> wrote:My sources (FCC records) show them to be licensed for 157.485 MHz. Whether
or not they are using this, I don't know. Never listened to them before.
If I hear them, I'll relay the PL.

3378. RE: [HoustonScan] Re: Community VFD

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-10-30 05:07:30 UTC
From: Scott Royall
Topic: 249 Message: 3378

Actually, I believe I said "all but cashed out." I was specifically thinking about trying to communicate with people inside buildings. The more vantage points available, the better your chances of reaching someone's HT inside a structure. UHF is much like light. It's lousy at penetrating solids, but good at finding ways of getting in. That's how the cell phones managed to hang in. To be very clear, the cellular system performed poorly, but it continued performing. It still had other sites seeing the weak signals from the WTC area so it worked with what it had. Given properly programmed radios, Omni-net or Smart-zone work similarly. They aren't perfect, but they can out-survive everything else out there. If the admins are held accountable, these systems will also "see" signals a single-point system won't.

Computer people like myself are taught the virtues of distributed resources, but there is something we're overlooking. Listen to Star-net for a while. How often do you hear users "doubling" (trying to talk on the same TG simultaneously)? Yes, it's theoretically possible but statistically impossible. Going back to our hypothetical downed firefighter, yes, it's frustrating and scary waiting for the "ok" beep. Once he (or she) gets it, though, there's very little doubt about being heard. No idiot with the volume turned off on his 100-watt truck radio will be keying up over that firefighter. Think about that. Yes, it does relate to heavy radio traffic. Things go quicker if you don't need to repeat yourself! :)

Subject: [HoustonScan] Re: Community VFD

Scott,
Thanks for your very lucid commnets on the merits of various radio systems. As a firefighter (in rural Ohio) with many firends on urban departments, I have found the entire discussion on the Site interesting.
I do have one point of disagreement. You said that FDNY's single point communication system "cashed in." That was not my impression from news accounts, audio, and transcripts. It appears the dispatchers stayed on the air throughout the event and were able to communicate with mobiles other than some interruptions right at ground zero. There were communications failures but these were primarily 1) trouble talking to units actually in the trade center

building-the problems encountered everywhere in radio communication
in high rises 2) problems re-establishing contact with units
at "ground Zero" after the collapses. Part of this was the
dispatchers following protocol and trying to reach the Command Post,
which was unfortunately destroyed. It was probably a while before
any units at "Zero" got themselves together enough to get on the
right frequency to talk to the dispatcher. As I once heard a Houston
Captain tell the dispatcher under infinitely less tragic
circumstances, "Ain't got time to talk." There was of course at
points a huge amount of radio traffic but I'm not sure that a trunked
system or more frequencies would have helped that, absent other
infrastructure, such as more dispatchers.
The floods in Houston, June, 2001, do support your point somewhat.
It was my impression that the Harris co trunked system stayed mostly
on the air while HFD's UHF radio system went compltely off the air
and HPD's mostly crashed. Not sure how cell phones performed. The
communications fiasco received only passing mention in the press and
even less attention or commnet from city officials. It's impossible
to know if the problem was related to inherent flaws in the design of
the system or to human error during the emergency (for example, one
rumor that floated aorund is that the back-up generator at the fire
alarm building ran out of fuel. I have no idea if this is true.).
I'm interested in other comments from you and others.
Thanks,
Joe Gay

What is going on here?
All sorts of HPD activity around the west loop and south loop.
Sounds like an escort for a VIP. Been hearing lots of DES activity on
Secret Service the last couple of days on 164.650 and 165.375 MHz.
Didn't know someone was in town.
They just cleared units working south loop.
They have fox up checking traffic ahead and doors open on building rooftops.
Sounds like they are heading north on the west loop towards I-10.

are you getting reception on vhf or uhf freqs?
are you sure the system is programed for motorola type II?
are you using a outdoor antenna if you are or not be sure the ant is
all the way inserted into the back of the reciever.
mabey you need an ouydoor ant!
also for the bc780, for trunked reception, a good setting for the
SQUELCH control is in the center of the range with the red marker
pointing up.

If you are programming the downtown Houston site, and doing "control channel only" mode, you need to have these four frequencies.
860.2375
859.2375
860.2125
859.2125
Right now, the last one is being used for control. Most of the time, the first two are used.
Make sure they are programmed in trunk mode and that you have the scanner set to do control channel trunking.

The only Med Tac 800 channel that is patched to VHF is Med Tac 2, it is
155.400, 146.2.

MedTac 1 is used for primarily be MCHD Responses and MCHD / Conroe FD
Responses
MedTac 2 is used for MCHD / County FD Responses
MedTac 3 is used as a spill over if they need another Tac Ch

Rusty,

Supposedly, the system randomly picks from the four choices at midnight each day.

THanks you guys! It works! Do u suggest that I programed all the
freq. as trunk and with the little M? would that be a safe bet to do?
if you need any pointers about police stuff, drop me a line. I was a
intern this summer at West University Police Department and know all
of them personally so any questions drop a line. Thank you.

If you have only ONE control channel programmed, thats a problem..
usually in Smart Net/Smart Zone, the control channel changes on a
24 hr basis to another channel...this is because the xmtr is on with
a 100% duty cycle for 24hrs...so they swap xmtrs to allow them to rest
and not burn out as fast...(eventually it DOES catch up with them!)

Just got this from another email list. Could be interesting to listen to or if you can, to talk to.

Beginning at 10 PM Monday, November 4 for about 4 days, the Expedition 6 crew will be in quarantine at JSC before heading off to Florida for their flight to replace the space station crew. We set up a ham radio at their quarantine facility so that they can get some practice talking on the radio. Depending on how much free time they have, they may get on the JSC repeater and want to talk to other hams. So if you would like to keep them company, and if you have a radio, you might like to keep in on in the background and listen for them on the 146.64 MHz.

Let me know if you get a chance to talk to the crews. They are

Try the AR8000 (AOR8000) or the AR8200 (AOR8200)series scanners.
They cover the AM and Shortwave bands. The 8.2 is now the one in
production, but you may be able to find an 8K on one of the
trade/purchase sites like Amazon or E-Bay, or at a Hamfest or
similar location.

153.950, Pl 192.8

It's on a Water Tower near the high school and a 6db gain decibel array. 110Watt Kenwood Base. Pretty good coverage for only being about 100 feet off the Ground in a low spot.

I got an Alinco DJ-X10 when they first came out and the receiver quality was HORRIBLE. They use a super-sensitive receiver with no front-end preamp, a design that works well for listening to MW and shortwave but is very intermod-prone in the land mobile band. If you can't afford a 780, look for a Bearcat 9000; these have the AM capability in the 136-150 MHz band.

Here is an article from the Savannah Morning News:
Rusty <rustyc@...> has sent you an article
****

IF I'M AWAKE, I'M LISTENING TO MY SCANNERS

Bob MorrisMorning News Staff Photographer

I started monitoring police radio traffic in 1973.

I started with an eight-channel Bearcat scanner. It was about a foot long and about 8 inches wide. It had to be plugged in. I discovered there was a way to wire it into the fuse box in my car and listen to it there.

There was no way to "program" it for the frequencies I wanted to listen to. I had to buy little silver things called crystals, about the size of a dime, but square, with two little prongs, and plug them inside the scanner. Each crystal had a different pre-set frequency. I had to carry the scanner back and forth from the office to the car, and from the car to the office.

Then they came out with a "portable" scanner. I still had to put pre-set crystals in it, but I could carry it with me everywhere. It had only four channels, with little red lights that flashed as it scanned each channel, but it was portable and I didn't have to carry the bigger one back and forth.

As the years passed, programmable portable scanners came on the market. I could program the frequencies I wanted to listen to, and no more crystals to plug in. And I could monitor up to 50 channels. Later, up to 100 channels.

Today, I have several 300-channel scanners. I keep them in my car, at my desk, at home, and one on my belt in a leather case. But I still only monitor about 50 channels, which is about all I need to keep up with what's going on.

Then, a few years ago, the local police and fire departments switched to the 800-megahertz frequencies, an all-new ball game. It's more complicated to monitor traffic now. But luckily, I have a radio expert named James Brummett, who I call "Frequency Man." When the police reporters and I got new 800-band scanners, Frequency Man programmed them for us.

If I'm awake, I'm listening to my scanners. If I'm in a place where I have to be quiet, I plug in an earphone and listen. The scanners go everywhere I go. On duty, off duty, on vacation. On one of my days off a few years ago, I was at the Bull Street Library, listening with my earphone. I heard a car had gone through the wall at the Hardee's on Mall Boulevard, so I went out there. When I get my hair cut, I listen to my scanner in the barber's chair. I've had to testify in court before, and of course the scanner was on the stand with me. And when I take a shower, the scanner sits on the back of the toilet.

I get my teeth cleaned four times a year -- twice at the office of Dr. Lee Young, a periodontist, and twice at the office of Dr. William S. "Billy" Ray, my dentist. The

scanner goes with me each time. Dr. Ray likes to listen to it, and when he examines my teeth, he's always asking me, "Bob, what's a Signal 18? What's a Signal 5?"

The only time my scanners are off is when I'm sleeping. I used to sleep with them on, but the scanner traffic got all mixed in with my dreams and I dreamed things were happening that weren't. Once, I was taking a nap with my scanners on and I heard that a police car had driven into the Savannah River from River Street. I rushed down there. It hadn't happened. Now I turn them off when I sleep.

Whenever I occasionally go out of town on assignment, and out of radio range, it's eerily quiet.

It makes me nervous.

So sometimes I re-program the scanner to the frequencies of the town I'm in, just so I can hear the familiar sound of police radio traffic.

Man in Black: 'Frequency Man' tunes in, comes to the rescue
By Bob Morris
Savannah Morning News

"Frequency Man."

That's what I call him. He's more of a scanner fanatic than me.

His real name is James Brummett and I met him about seven or eight years ago. His hobby is collecting radio frequencies -- and listening to them.

James started collecting frequencies about 1963. He has more than 1,500 of them. He has four scanners, three at home and one mobile scanner, and he listens to EVERYBODY -- in three surrounding counties and two states, from the police to the Georgia Bureau of Investigation, the State Patrol, Game and Fish, aircraft. "Everything from A to Z," he says. He just likes to know what's going on. "I keep my mouth shut and my ears open."

Every time he gets a frequency he thinks would interest me, he calls me. He has piles and piles of books and magazines on radios and frequencies. He's really a nut.

Not long ago, the local police and emergency agencies changed over to the 800 megahertz band. I thought I wasn't going to be able to monitor them. Well, it was "Frequency Man" to the rescue. Not only did he tell me what kind of new scanner to buy and where to buy it, he came down to the paper and programmed mine and the ones used by the police reporters.

These new scanners are complicated. If I or one of the police reporters push a wrong button, the scanner will sometimes go haywire. Then I have to call James. He immediately comes down to the paper and fixes the problem.

I'm thinking about asking the boss if we can put a large searchlight on the roof of our building, with a large FM in the lens, so we can summon "Frequency Man" if we need him at night.

Yeah you are problay out of their range. they are on only UHF, I can sum it up for you. Someone left a rag on a stove and it caught on fire. The last I heard the fire marshal was being called out.

Not that it matters now but you're not going to hear anyone using 460.000 MHz.
Bellaire FD uses 460.600 MHz. They're not the strongest thing out there but you can probably pick them up on a portable in Pasadena.

I really have no idea so I'll throw out some random thoughts:
Wind speed indicator?
Smog/pollen sensor?
Now that I think of it, I've seen things like that in top of natural gas meters so that you can see from a distance if gas is flowing through a line. That's probably what that is. Think they use two different colors so you can see it spin. Is there a small yagi antenna also nearby that might transmit data to Entex?

Think this is part of the ratpack system of receivers on certain tall buildings, banks, helicopter, HPD patrol cars, and FBI.
This is to triangulate the position of the small transmitter (ratpack) they slip into the money bag during a robbery. Hopefully, when they find it, it is still in the money bag, still with the robber-not dumped in a dumpster or thrown out on the street.
They have signal level indicators so they know which tower is getting the best signal.
Don't know where all the receivers are or even what frequency they use.
This info starts to get into the gray area of what should be discussed if someone happened to know this info.

Just for some folks curiosity, there is a Simulated Emergency Test drill occurring on 146.720 and 146.760 MHz and possibly other frequencies in the northwest part of Harris County.
The drill is a derailed freight train near Cypresswood and Cutten Rd with some spillage into Cypress Creek.
Staging is at Louetta and Steubner Airline.

Check this out:
http://makeashorterlink.com/?A20E32562
According to this, there are several land mobile bands inserted in the TV broadcast band. Some of these I'm familiar with, some I'm not.
Ch.16 & 17 run from 482 to 494 MHz. This is one of the UHF-T band allocations given authority in several metropolitan areas of the country to help give extra spectrum in clogged areas.

Ch.35 runs from 596 to 602 MHz. Don't know who is using this but I have some ideas.

Ch.41 runs from 632 to 638 MHz.

Ch.63 runs from 764 to 770 MHz.
Ch.69 runs from 800 to 806 MHz.
The new 700 MHz public safety band folks have been talking about since 1998 runs from 764 to 776 and 794 to 806 MHz.
Read this for more info:
http://wireless.fcc.gov/publicsafety/700MHz/
I guess this means that Ch.67 (KLTJ) can stay where they are in the middle of this band(?). Apparently, the presence of TV channels still existing in this band could hamper the launch date of the public safety use of the band.
Also check this out for local information on the usage of this band:
http://www.hic.net/region51/
Then look at this:
http://www.hic.net/region51/bryan.pdf
The reference to channel 641 is very interesting.
This is 866.550 MHz. Never heard anything about this for "DPS Statewide Incident Control".
Same for 868.050 and 868.350 MHz.
Doing some checking, I find a license for all DPS mobiles for 866.050, 866.550, and 868.350 MHz for voice traffic. Might be something to plug in and listen for. Anything you hear will be 20 watt simplex.
Some of the STAR-Net sites are using the first two freqs.
868.350 is used by the Montgomery County trunk so it might give a better chance of hearing them on this one in the Houston area if they use them.

3428. HISD radio changes

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-09 21:23:20 UTC
From: Myles Barkman
Topic: 3428 Message: 3428

Looks like HISD is trying to improve coverage of their system by moving some of their frequencies to two other towers and using directional patters to cover Houston.
They want to put four frequencies at the antenna farm off McHard Rd near Missouri City and four on the tower with the Aviation Department off Jenson Dr.
The Jenson tower will get 866.2875, 866.6625, 866.9125, and 867.1625 MHz.
The McHard tower will get 867.4125, 867.6875, 868.1875, and 868.4125 MHz.
I'm not sure how the new system will work. I'm guessing that it will be a simulcast type network where each will have a control channel and carry the same traffic on all three sites. Not sure if the user controls which site or if the radio chooses. This being an EDACS system, maybe someone can tell us if those have SmartZone characteristics.

Myles, I am wondering if these are the Texas statewide public safety 800 mHz mutual aid channels. In addition to the national NPSPAC 800 mHz mutual aid channels, there seem to be assigned on a state-by-state basis 5 additional 800 mHz conventional channels for law enforcement, fire/EMS and local gonvernment. Up here in the northwest both Oregon and Washington state each have 5 800 mHz channels in use besides the NPSPAC channels. There are 2 for law, 2 for fire and 1 for local gov.

Just FYI;

OREGON STATE
866.7500 - Local Government
866.3250 - Fire/EMS 1
866.7750 - Fire/EMS 2
866.3875 - Law 1
866.8000 - Law 2

WASHINGTON STATE
867.5375 - State Ops 1
867.5625 - State Ops 2
867.5875 - State Ops 3
867.6125 - State Ops 4
867.6375 - State Ops 5

Under the new rules, TV 52 thru 69 (inclusive I think) will be
refarmed to Public Safety operations....I hadnt heard of a slot in
the middle open; but there will be no TV above Channel 51 when all
analog ceases operations in late 2006; even the few translators above
69 (which have been there since 70-82 was licensed) will be finally
gone (much to the relief of the 800 MHz SMR operators!)

As for LMR use of TBAND, 470-512 MHz (Channels 14 through 21)
has been allocated for years..The channels are allocated in major
areas and are not to be used (yeah right!) outside the MSA...
Only one channel is usually allocated...Repeater splits are 3 MHz
vs the standard 5 MHz (when you only have 6MHz to work with per
TV channel, might as well make the most of it!!)

TV 35 and 41? I wasnt aware of those.....I have heard in NE that
some LMR operations are now suffering interference because of DTV
allocations firing up 100miles away or less on the channel in question!
(So much for the FCC being a good coordinator....they are much like
any other coordinator...and make DUMB mistakes! :)

I see also that 608-614 MHz is not used for TV broadcasts (Channel 37) so that it may be used for the WMTS (Wireless Medical Telemetry Service). These are the devices we used to listen to mainly in the 460 MHz band in hospitals so that patients could move around the hospital and still have their vitals recorded/monitored.

This band is also reserved for Radio Astronomy.

As far as the other bands I mentioned earlier, I don't see any frequencies licensed (by the FCC anyway) around Houston in the 596-602 MHz band, 632-638 MHz band, or the 764-806 MHz public safety band.

I also don't show anyone licensed in the first block of land mobile frequencies from 482-488 MHz although it is reserved for land mobile use in Houston.

Found some frequencies for Westfield VFD.
I know, I hadn't heard of them either but they exist east of the Aldine area north of Houston.
They had been using low-band VHF (33.860) but look to be trying to hop onto UHF like so many VFDs in North Harris County.
453.3125
453.6875
453.775
All repeaters and located near Beltway 8 and Imperial Valley.

Myles, Yup they are jumping on the band wagon.
Don't know what the line up will be, but from what I heard 453.6875
and 453.775 will repeated and the 453.3125/458.3125 will be used
sinplex for Fireground Tac. The repeaters will be located on the
Klein Bank Building at Imperial Valley and the North Belt.
As soon as I get a list, I will get it posted.

Westfield Rd. VFD serves east of Hardy, south of FM
525, west of US 59, and north of the Houston line.

I'm going to go through the list of 56 members that have bouncing emails.
As I've said before, there are several reasons emails may bounce including
but not limited to:
Mailbox over quota
Account cancelled
Server problems

For accounts that appear to be cancelled, I'm removing them from the list.
If you check on the web that you have been removed from this group and you
didn't wish to be, please let me know since I may not have read the error
message correctly and accept my apology. If you wish to rejoin the list, do
so yourself or I can send a message to you to get you back on.

Thanks.

Can't really comment on this from personal experience.
Looking at Standard's page on the 5910T
http://www.standard-radio.com/mobile/gx5910.htm
it appears to be an 800 MHz LTR trunking radio.
This one sure won't be able to get on STAR-Net.
Besides, the frequencies cut off at the low end of the 866 MHz band.
No public safety agency in this area I know uses 800 LTR.

Apparently, that 580T is somewhat unique in that it is a dual-protocol radio. It can do LTR and Privacy Plus.
That is neat. Too bad it can't do EDACS also.
It also covers the entire 800 band so it can work on STAR-Net. Only thing is, it can't do Smart-Zone as far as being able to change sites or probably auto-affiliate.
I wonder if it has the capability of inhibiting transmit which is not an option with M.

Contact Bill at Advanced Communications for programming the Standard. Don't tell anyone that they are used by most wrecker drivers and news media in the Houston area to monitor the County radios and do it very well. Not sure if they can be reprogrammed for the Zone system anymore. Some could and some couldn't.

From: Joshua Carroll
Topic: 3447 Message: 3447

There was a pursuit that started in League City off Calder Road (the "Killing Fields"). Started a little after midnight 11-11-02 and ended with a pursuit throught most of Houston, up 45, taking the 59 exit and ending at 4000 Turnberry. League City was joined by Webster, then Houston, then HPD. League City has the guy in custody at 12:27am. Houston is now sending a K9 and a Chopper with a FLIR on it (Forward-Looking InfraRed) along with some investigators. They said they might be looking for a body..

This is usually my bedtime but I'll update should I find out.

But of course, they might be quiet now over the radios.

Too bad IPN didn't pick this up, I could go to sleep :)

More corrections, the Pursuit was League City, Webster, HPD, and Pct. 8.

One of the League City units was having trouble with his vehicle during the pursuit and it was running very bad on the way back.

Still not sure if the actual person in the chase was taken into custody, or someone at the Calder scene was finally arrested. Evidently, while running, they ran about 115 MPH down I45 and tossed a gun out between 518 and Nasa Rd1. (My sweetie kept bugging me about a movie and I was like grrrrr)

I heard (on 460.2250) from the helicopter asking what areas he'd like FLIRed. Then at 12:55am they said they didnt see any unusual "heat sources" that would indicate a recently dumped body, nor could he find anything with the regular spotlight.

HPD canine arrived on scene 12:56am.

Webster unit arrived back in his jurisdition 12:57am and was told to meet his supervisor at the station.. (uh-oh)

Well will keep listening until I fall asleep.. hope the media picks this up.

Too bad. I have a couple of handhelds and a couple of mobile units, the mobile units are usable. The handhelds are great for deer hunters, great range on simplex and not very large. With APCO 25 we may have to have the commercial radios for the first year or so till the scanner mfg's do the 9600 baud radios. Uniden's first scanners will not. Thinking seriously of the PRO-95 at Radio Shack due to the low $149.95 price. Just in case one of the other radios crap's out during an important event.

Over the last few days, I have been hearing what sounds like police traffic on the South Houston Fire channel (155.94 pl 146.2). Then today, I hear what sounds like either Waller County or Wharton County with a ten-count. Neither of these counties turned up with a license for this frequency, however. This signal comes in very clear in the North Houston area and uses the same PL tone as South Houston. Any ideas?

Interesting that Waller Co SO thinks they need another repeater. Wonder if it is secondary, for better coverage to the south (it's in Monaville) or because of interference on 155.760.
There is supposed to be a STAR-Net site put up in Hempstead sometime so you'd think they might jump on that.
What kind of traffic is on it compared to 155.760?

It's mostly traffic stops with license and warrant checks. It may be to get away from the fire departments on 155.76, or because they are vacating Nextel. I can't imagine it working too well out in the boondocks.

From: Myles Barkman
Topic: 3457 Message: 3457

Here's the skinny on the new repeater.
155.760 was just the stew pot repeater for the county.
SO, Police departments, fire departments and EMS calls were all done on this.

SO wanted their own repeater for law enforcement.
Here comes 155.9325 MHz. It's on a taller tower and more centralized within the county for better coverage.
It will be used as SO primary dispatch. 155.760 MHz will be the home for "other".
Right now, the smaller PDs haven't gotten new radios required to use the narrowband frequency so they will remain on the old repeater.

When you listen to these frequencies on a regular scanner, you might find that the audio is lower than you are used to. This is because they are using less bandwidth (less deviation, less volume). Apparently, some of the SO units are noticing this on their own radios though. I thought the radios would compensate for the lower bandwidth by boosting the audio internally so they would not know the difference. Can someone comment on this?

Whilst out in my truck during my lunch break, I heard Lifeflight called to a scene in Cy-Fair's territory. The contact info was for them to use "1960 Mutual Aid".
I didn't have my up-to-date list with me in the car but I thought it was something like 453.075 or 458.075 or something close to it. I was tuning around and heard the bird come up on 453.050 repeater calling for the ground contact.
In case you don't know, this repeater belongs to the Houston Housing Authority. No one answered on the repeater and a little later, I heard the bird on 458.075 calling. Apparently they got no answer so they came back on 800 to talk to control to find out what the frequency was supposed to be. There was some confusion as no one seemed to have an actual frequency list. Control told Lifeflight 4 that they should have it programmed in their radio.
I don't know if they ever made contact. I had to go back to work. I did hear someone come up on 458.075 and try to talk to Lifeflight but LF wasn't listening or something.
Looks like they need to work the bugs out of the system (operator error).

On another note, Cypress Creek has again changed their channel lineup. This to incorporate Little York VFD into the dispatch plan.

The new channels are now:
1 EMS1 Dispatch Cypress Creek EMS 453.125
2 FIRE2 Central Dispatch (Klein, Champions, Ponderosa) 453.375
3 FIRE3 West Dispatch (Cypress Creek) 453.300
4 FIRE4 East Dispatch (Spring, Northeast) 453.100
5 FIRE5 Little York VFD Dispatch 453.4625
6 East TAC 452.225
7 Central TAC 453.750
8 Central TAC (Champions) 451.975
9 West TAC 451.425
10 Northeast TAC (Spring) 461.900
11 Northwest TAC (Klein) 452.500

They no longer have repeaters with multiple PL tones. It was just not working out too well.
If you want the PL tones for your scanners, you can get them off my list.

From: Rick Parrish
Topic: 3460 Message: 3460

Except for B&W, I couldn't find any into on the following 900 Mhz Motorola systems on Lindsay's TRS database (www.trunkedradio.net)

Motorola 252A control channel 938.462500
Motorola 1b17 control channel 938.987500 Brown & Root
Motorola 463a control channel 939.162500
Motorola 1a1f control channel 939.312500
Motorola 1c35 control channel 937.875000

Regards,
Rick

3461. Re: [HoustonScan] Cy-Fair & Cypress Creek VFD info

Cy-Fair VFD coordinated with Life Flight a UHF channel that we, and other area departments, could use instead of VHF Fire Mutual Aid. Cy-Fair donated the 458.075 frequency for this with a PL of 192.8. Originally it was called UHF Mutual Aid; however, after getting Hermann on board they asked if we could call it something else thus it is now supposed to be called 1960 Fire Ground. Unfortunately, Cy-Fair VFD and Cypress Creek VFD's had already reprogrammed their radios to read UHF Mutual Aid. We have tried telling everyone of the change but as you can imagine it is difficult to get the word to everyone. We are still hashing it out but it does seem to be working.

They said that they had too many mutual aid channels and wanted something
much more distinctive. We really didn't care what the name was, at least I
thought. The confusion is just a matter of time type deal.

937.875 (KNNY231) is part of the Nextel Houston system #2, which is on trunkedradio.net. 939.3125 falls under the KNNX588 license for Nextel. You can find the licenses for the Nextel systems by using the new FCC database search (URL below). Use radio service code "YD" (900 MHz SMR auctioned) and "MTA014" (Houston) as the Market Code. The licensee names for Nextel are "FCI 900" and "ACI 900".

http://wireless2.fcc.gov/UlsApp/UlsSearch/searchMarket.jsp

I've also recently started compiling some info on some of these 900 MHz trunks on my web site. http://www.ericcarlson.net/scanner/houston/

The RAILFAN hobby is getting excessive scrutiny from the uninformed.....

We 'radio' folks might just be NEXT.....

RailNet 802, out

begin fwd. msg:

From the Nov 15 Washington Post.

By Don Phillips
Washington Post Staff Writer
Friday, November 15, 2002; Page A01

On a balmy Sunday afternoon late last month, Richard Whitenight did what he often does on his days off: He went to a busy railroad junction in Fort Worth to watch the trains roll by.

But as he sat making notes about passing freight trains, two police cruisers approached. Over the next five hours, Whitenight -- who works for the police department in nearby Arlington, Tex. -- identified himself to the officers. Then he identified himself to the officers' supervisor, then a detective from a terrorism task force, then the FBI. They seized his trainspotter's notebook and grilled him about every mark and note in it. They searched his car and took photos of it, inside and out. Finally, he had to sign a form agreeing never to return to the location known as Tower 55.

Whitenight is one of thousands, perhaps millions, of people around the world who spend much of their time observing and photographing railroad operations out of a love for trains. In general, railroads have encouraged these "railfans" as long as they do not trespass or interfere with operations. Railroads even hold contests to use railfan photographs in calendars, and the Association of American Railroads has started a Web site to encourage the hobby.

But after the FBI announced last month it had credible reports that al Qaeda might be targeting railroads, a growing minority of railfans have been questioned and sometimes searched. A handful have even been threatened with arrest, for pursuing a hobby they have embraced for years.

Law enforcement officers and train crews have been told to be on the lookout for suspicious characters asking detailed questions about railroad operations, taking notes and taking pictures of trains. It appears the descriptions of "terrorist" and "railfan" are the same.

"It's an unfortunate coincidence," said Edward Hamburger, president of the Association of American Railroads. But he said railroads may be a terrorist target, and "we want them to know we're not a soft target. People have to recognize they will be approached, they will be questioned, they will be asked to move on."

"Railfanning, by its very nature, is suspicious," said John Bromley, longtime head of public relations for Union Pacific, the nation's largest railroad. "It involves loitering, taking pictures and taking notes."

Some railfans are railroaders themselves, some museum curators, professors and others with a link to railroading. Others come from all walks of life. Some become minutely specialized, such as one group that follows the movements of a single type of diesel locomotive.

But most are like Whitenight, 54, a Vietnam-era Navy veteran who simply loves to watch trains. In fact, until the FBI warning, dozens of railfans would regularly gather at Tower 55, an old switching and signal tower where main lines of the Union Pacific and the Burlington Northern Santa Fe converge near downtown Fort Worth.

A lot of the train crews came to know the group and often waved and smiled. "Some of the guys recognize us," Whitenight said. "They see us all the time. But now they've been told to report us."

Even though "train crews sort of know a railfan when they see one," as Bromley put it, Union Pacific has ordered them to report all activity that might be remotely suspicious. That includes people taking pictures of trains, even if they are doing so legally and are not trespassing on railroad property.

Railroad police or local police departments are then dispatched to check out the situation. Reports of suspicious activity are "up significantly" in the last few weeks, Bromley said.

"We certainly aren't out to destroy an American tradition of watching trains, but we have to be careful," Bromley said.

Norfolk Southern has taken similar steps, although Robert Fort, communications vice president, said railfans won't be subject to arrest unless they are trespassing. Even then police will generally just escort railfans off railroad property, he said. "Tact and diplomacy are the order of the day," Fort said.

Spokesmen for Burlington Northern Santa Fe, Amtrak and CSX Transportation say they are not specifically targeting photographers but have asked crews to report suspicious activity.

Normally, police who encounter railfans simply check identities and record names and other basic information. But a few encounters go beyond that. Internet chat groups have been filled with stories of conflicts with police and railroad employees, including one Union

Pacific conductor who ran up a bank to a public street to shout at a railfan to stop taking pictures of his train.

Jim Satterwhite of Greenville, Tex., president of Coastline Rail Services, was out photographing trains last weekend when his wife had a visit from police. It seems a Kansas City Southern Railway locomotive crew had reported his tag number. Shortly after the police visit, his wife received a call from a railroad official.

Satterwhite said in an interview that as a 20-year Air Force veteran who now works in the railroad industry, he understands the need for safety and security. But "when do we become prisoners in our own homes?" he asked.

Even before the FBI announcement, railfans said they had noticed an increasing police presence.

Joseph Suarez, 17, of Carson, Calif., said he and a friend were ordered out of their parked car a few weeks back while waiting for a train and patted down by a Los Angeles County sheriff's deputy, who had trouble comprehending why their back seat was full of cameras, notebooks and train magazines. After his friend showed the deputy a business card advertising train photographs for sale, "that seemed to satisfy him a little bit." Finally, the deputy walked away, saying, "I don't have a problem with you being here." Nonetheless, Suarez said, they left the area and don't intend to go back for a while.

Railfans aren't the only suspicious-looking characters who are merely hobbyists. Planespotters scour the world's airports to record and photograph airplanes. Greek authorities recently arrested several British and Dutch planespotters and charged them with espionage. They were released last week by a judge, who said it was clear they were merely following a hobby. One big difference between planespotters and trainspotters is that it is much easier to get close to the hundreds of thousands of miles of railroads, while most airports are fenced off and guarded.

Even as police and the railroads view railfans with suspicion, Federal Railroad Administrator Alan Rutter says the railfan network could be "a real value" in spotting truly suspicious activity. Rutter said the government is already taking advantage of the intelligence-gathering abilities of railfans. In addition to perusing Web sites, an FRA spokesman said, the agency's field staff has begun asking people it knows to be legitimate railfans to report suspicious activity.

The railfan intelligence-gathering capability is formidable. There are numerous Internet chat groups that keep up with almost everything unusual that moves on the railroad, from the Ringling Bros. and Barnum & Bailey Circus train to trains carrying nuclear casks to storage sites.

Those chat sites have been filled for weeks with advice on what to do about the growing police attention. That advice includes a caution that the railroads also stress: Don't trespass on railroad property. Many of the postings take a patriotic tone; many others express anger. But the advice also includes ways to look unthreatening, by wearing a shirt with a locomotive on it, for instance, or carrying railfan magazines to show police officers who never heard of the hobby.

"As crazy as it sounds, you need to educate the cop about our strange hobby in under 60 seconds," wrote Todd Clark, the webmaster of Trainorders.com.

Clark said in an interview that, for the most part, railroad police are familiar with the hobby but local police "think it's bizarre that grown men would be out there taking pictures of trains."

Rutter suggested that railfans be "mellow" when approached by police. He said Whitenight was a good example of how to act: Cooperate, keep cool and understand that "everything passes in time."

At the same time, he said the FRA now understands that it must help law enforcement agencies understand railfans.

"We'll try to do what we can to let people know that railfans are out there," Rutter said.

Most railfans take notes of some kind, often in a language all their own. "That ALBMDX-22 was 55 loads of mixed Toyotas and Nissans for the Midlothian unloading facility'' is one of the more jargon-free examples.

Whitenight said the police in his case "didn't even recognize our terminology."

"If even one of them had known what we were talking about," he said, "we could have cleared this up fast."

Clark said the Federal Railroad Administration obviously is watching his Web site, because an official contacted him in May expressing concern about a person who asked about the location of certain bridges and wrote in broken English. That person turned out to be a legitimate Swiss railfan.

The FRA also asked Clark to issue a caution on the Web site about being too specific about the location of bridges and tunnels. Most of his subscribers complied immediately, he said.

Some railfans are advising their brothers to remain undercover as much as possible, not looking like railfans, keeping the car out of sight, taking one photo and moving to another location. This is becoming known as "guerrilla railfanning."

"You mean like Poland in the 1960s?" said Nils Huxtable, a Canadian railfan who has traveled the world for decades taking pictures of steam locomotives, writing books and producing train calendars. In Eastern Europe years ago, he dodged the secret police to take forbidden railroad pictures.

Huxtable said he has started to avoid the United States for railfan activities. "It's just not enjoyable being in that atmosphere," he said.

Just heard Westlake VFD disptach (33.740) "Phoenix5" to assist Cy-Fair on a mva on FM529, is this a private EMS company? I know Westlake had 2 ambulances and were responding to calls a few days ago.

3471. channelview incident

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-17 20:02:02 UTC
From: Myles Barkman
Topic: 3471 Message: 3471

It's sort of old news now but there was some sort of commercial fire at
16955 Ave A in Channelview over the past couple of hours. I caught the
action late so it was quite awhile before I could find out where these folks
were at.
Several departments were mutual aid:
Highlands
Baytown
Houston (hazmat)
Equistar?
Lots of talk about foam being need and concern for runoff. They asked the
county to bring sand trucks to blocks up the ditches.
Garner environmental is also out there.
A search on this address comes back to a Southern Truck and Equipment Co.

3475. BC780 LTR Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-18 02:43:55 UTC
From: bpckty1
Topic: 3475 Message: 3475

I programmed the Reliant Park frequencies in my BC780, correct lcn order and starting with channel 1 on the bank. I could not receive any talkgroups when in scan mode. But, when listened to individually, in trunk mode, the talkgroups appeared. However, I had no problems when monitoring with my RS Pro-92, orginal configuration.

Any help with the BC780 programming/reception will be appreciated.

Thanx in advance,
Happy Scanning

3476. Re: [HoustonScan] BC780 LTR Question

Yahoo group: HoustonScan (1999 — 2002)

Make sure the display shows "SCAN" and "SEARCH". You may be in scan mode only (which only scans talkgroups you've programmed for the trunk). Press the "SRCH" button after you're in trunk scan mode, this will scan whatever talkgroups are active (unless you lock them out).

I received info from one of my Houston sources that the Channelview incident was a gasoline tanker on fire at a filling station. They did run low on foam. Also had problem with water pressure, compounded by confusion over what water district covered the area.
Thanks for your report on the situation.
Joe

It wasn't a gasoline tanker. It was a small chem complex that stored diesel in 3 different tanks. For some reason the tanks caught on fire. I didn't here why but I believe that a forklift that was sitting near the tanks started it. The small complex was beside a public storage garage and about 10 units of the garage were damaged from the heat of the fire. Departments that were called

Channelview
Sheldon
Highlands
Cloverleaf
Baytown
Jacinto City
Crosby
Pasadena was disregarded after fire was out.

I was just talking to an EMS voluteer who told we the W.C.SO was moving all Sherrif/Police traffic to a new freq. The old chanel will be for EMS/Fire only. They won't even tell the EMS the Freq so they can listen. They said a time there was too much traffic with them all together at times. All the fire and most of EMS are voluteers who at times may not be profesional on the air. Radios in pickups everywhere. At times there are dead keys from stuck mikes. With that many radios it hard to find out who it is.
(the last part is speculation)

3482. Robbery

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-18 23:24:44 UTC
From: Myles Barkman
Topic: 3482 Message: 3482

Robbery occurred at 803 Edgebrook. Cash register drawer was taken from store (gas station?).
Was reported as four black males in a black Cadillac.
A wrecker driver spotted the vehicle W bnd on 610 and called in the location of the vehicle to PD. PD came up on the vehicles as they went S bnd on 288.
After driving through some neighborhood and several HPD vehicles making the scene, they tried to take the suspect vehicle down but the chase was on.
They threw the shotgun out the window somewhere on 610 I think and possibly the cash drawer.
The chase ended around 610 and Holmes.
I see Channel 13 helicopter had some shots of it already as it ended.
Several accidents occurred from the pursuit and as the suspect vehicle stopped.
Multiple ambulances have been called out to check injuries (sounds mostly minor).

OK, news says it was an AutoZone.
Channel 13 helo actually got some good pics of the pursuit. Shows the shotgun being thrown onto 610.
Didn't get to see the rest of the footage yet. Will watch again at 6pm.
Kudos to the wrecker driver for spotting the vehicle and probably getting the heads-up on his radio.
Kudos to HPD for taking them down without resorting to any deadly force both from suspects or officers.
Kudos to Channel 13 for being on top of it (literally).
HPD fox was called to the scene but I'm not sure they made it in time to be of any service.

Keep in mind, when there is a pursuit and HPD fox is involved, media will be trying to get into the area. Sometimes, media will be there first. In any case, they will talk to one another on 123.025 MHz so you might catch some interesting info on there between the pilots.

Has anyone ever confirmed use of ISR radios in this area?
These are the FRS-type radios the government is using because they were told
they can't use FRS (or something like that).
Freqs are between 396 and 400 MHz. The Marines were the first to get the
radios a couple of years ago (contract through ICOM) and now they are being
issued to several government agencies, including Civil Air Patrol.
ICOM used their 4008A FRS radio as the basis of the ISR radio, only
difference is the frequencies, and maybe a better casing.
Government agencies can buy the radio for $85 a piece. They are NOT
available to the general public.
Use of the radio is limited to non-secure type comms.

You can get info on the frequencies of these radios and other federal freqs
(mainly of interest in Minnesota) at
http://www.geocities.com/mn_metroscan/fed_milt.htm

Sometimes, it's easy to miss the obvious. That's not something I even considered when I was searching for stuff last time I was on it in August.
I was listening for licensed VHF and UHF freqs.
They are licensed on TXDOT freqs in the 47 MHz band, the 151 MHz band, and some stuff in the 458 MHz band.

I've only verified ops on 151.055 MHz between the ferries and the landings.
I've figured they probably use Marine Ch.13 156.650 MHz to talk to other ships in the area, just as I think the Lynchburg ferries do, but I've not actually heard them.
I've yet to actually hear the Lynchburg ferries use any radios, neither the fireboats on the channel (except on fire agency's systems).

Topic: 3089 Message: 3490

Does anyone know what is up with La Porte's licensing of more VHF and UHF repeaters?
In addition to 154.130 MHz which is what they've used for many years, they also have 154.325, 453.0625, 453.2625, 453.3875, and 453.5125 MHz.
What are they planning to do with all these?
I haven't heard any of them used, except data bursts on 453.0625.

On another note, it is safe to delete any reference to low band VHF for Cy-Fair VFD?

Is Cypress Creek getting ready to pull the plug on 33.780 finally? If they get everyone else in the area on UHF, they won't need it, right? Is it used for station speakers/pagers?

What ever happened to Atascocita's testing of the STAR-Net system?

Are Aldine/Eastex/Westfield getting off of low band too?

Is Northwest VFD gone from low-band?

Looks like Community (Alief) VFD may be one of the last guys in the area to abandon low band.

Only other folks I know using it are guys in Brazoria County.

That may not have sounded good let me try that again:
> at times may not be profesional on the air.

the officers and EMS are on the air every day and use a more
shorthand way of saying things. Sometimes it takes up a lot more air
time for voluteers to comunicate.

Myles,

This is a not quiet the same topic, but along the same lines. You can remove Grimes County Fire Fighters Association's low band 37.180. We have not had a unit on it for 7 years or so and have no plans to do so. We are keeping the license though just in case.

I can still see a small plane making a back and forth search pattern. Does anyone know what freq. are being used in the search? A helicopter (looked like Ch 13 news) came by for a while. I heard the helicopter talking to someone on 154.950 , he may have been talking to the plane, not for sure.

What are normal freqs in this type of search?

3501. Cypress Creek EMS and FD's in north harris county

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-19 22:51:11 UTC
From: fireman9148
Topic: 3501 Message: 3501

I have heard that there are going to be 58 different UHF freqs used in north harris county any truth in this? also was wondering if anyone knows the freq for private ambulace companies ie. alliance, prime care, amr.

Body was found in a field close to some houses under
construction. It was badly damaged but still intact.

mcso & conroe pd had emergency drills today, they will have them again tomorrow.
tomorrow will be the last day.

3505. Re: BC780 LTR Question

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-20 01:23:10 UTC
From: bpckty1
Topic: 3475 Message: 3505

To Eric and the others who responded off list, I found that there was one other little trick that I should have realized. I was combining a Motorola system and the LTR. I had put the LTR in channels 1-10, but the LTR talkgroups were in banks 7 and 8. When I moved the LTR talkgroups to banks 1 and 2, the scanner worked as it was advertized. So, a tip of the hat and a tip to future scannists.

Happy Scanning...

--- In HoustonScan@y..., "Eric C. Carlson" <ecarlson@a...> wrote:
> Make sure the display shows "SCAN" and "SEARCH". You may be in scan mode only (which only scans talkgroups you've programmed for the trunk). Press the "SRCH" button after you're in trunk scan mode, this will scan whatever talkgroups are active (unless you lock them out).
>
> -Eric
>
> bpckty1 wrote:
>
I programmed the Reliant Park frequencies in my BC780, correct lcn order and starting with channel 1 on the bank. I could not receive any talkgroups when in scan mode. But, when listened to individually, in trunk mode, the talkgroups appeared. However, I had no problems when monitoring with my RS Pro-92, orginal configuration.

Any help with the BC780 programming/reception will be appreciated.

Go to this page. Look for the model # and click on the # this will
open an adobe reader. You can then print what you need.

Sorry the link did not work. Go to radioshack.com and look for the
button for product manuals. Once this opens click on communcations then
on scanners. look for the model # on the list. It is there.

To program frequencies:
Hold down TRUNK until the scanner beeps.
Select the bank you want to store frequencies in by pressing a
number key.
Enter the freq. and press E.
Press manual, enter the next freq, press E.
After all freqs are entered press SEARCH.
The default setting is Motorola type 2.

After the scanner is trunktracking you may program a scan list:
Press MANUAL
Enter the type 2 id and press E.
Press MANUAL and enter the next id.
After all IDs have been entered press SCAN.
You can now scan the list or press SEARCH to see all IDs.
Holding down SEARCH until the beep will show all active IDs.

Hope that gets you started.

what do they expect? broadcasting emergency drills on a primary
dispatch channel.
they and every agency needs to have freqs set aside for simulated
emergencies. go figure

I see that the Village of Pleak has a license for 154.130 MHz. Maybe Pleak can't afford to play on the trunk system so they set up a relay.
As far as Needville goes, I don't even know what frequency or talkgroup their FD uses. I see their PD has a talkgroup.
Found this bit of info for Needville though. The city of Needville has a repeater on 461.875 MHz. It's only licensed for 6 mobiles. Could be public works or some city administration. Anyone know?
Interesting to see that Needville High School is licensed for a repeater on 451.700 MHz that is taller that that, has more mobiles licensed and more power that the 461.875 repeater. I suspect that is for school buses.

From: Marvin Suggs
Topic: 3531 Message: 3531

Thanks Miles and Kevin,
For your help. That makes a lot of sense! It's very scratchy so it must be low power since Pleak is not too far from where I'm at.

Thanks also for the 9008 TG info. Didn't think that HCSO would be on the FBCSO system, but it makes sense.

Thanks for the Community FD freqs, I put them in the scanner and will let you know if i hear anything.

Marvin

The talkgroup listed for Fresno FD 1 (3984) dispatches the following fire departments: Fresno, Thompsons, Pleak, Needville, Beasley, Orchard, and Fulshear. The tone-outs and dispatcher are also on 154.22 pl 114.8. Their system is set up kind of weird because a unit can reply on the VHF repeater and it will not be heard on 800, or they can reply on 800 and it won't carry over to VHF, but the dispatcher comes out on VHF and 800 at all times. Fulshear has a talkgroup of 4720, Needville has one at 45616, and Northeast VFD has one at 45648. These are sometimes used for response to an incident, and chit-chat, and can be monitored by the dispatcher. Since the talkgroups are a part of STAR-NET, the best place to listen for them is the old Fort Bend County Richmond site, though you can sometimes catch the Fresno dispatch talkgroup on the Clodine site. BTW, this is all stuff I've heard on the air.
Myles Barkman <kg5ai@...> wrote:I see that the Village of Pleak has a license for 154.130 MHz. Maybe Pleak
can't afford to play on the trunk system so they set up a relay.
As far as Needville goes, I don't even know what frequency or talkgroup
their FD uses. I see their PD has a talkgroup.
Found this bit of info for Needville though. The city of Needville has a
repeater on 461.875 MHz. It's only licensed for 6 mobiles. Could be public
works or some city administration. Anyone know?
Interesting to see that Needville High School is licensed for a repeater on
451.700 MHz that is taller that that, has more mobiles licensed and more
power that the 461.875 repeater. I suspect that is for school buses.

3545. Re: 154.130??

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-25 19:04:52 UTC
From: Myles
Topic: 3522 Message: 3545

You should be able to refer to
http://home.houston.rr.com/freqs/harris.htm to find out whoyou are
hearing on the STAR-Net system. Doesn't matter what site they are
on. The talkgroups are unique to each agency. I may need to do some
updating to the list with all this good info about Fort Bend fire
stuff now...

>
> The talkgroup listed for Fresno FD 1 (3984) dispatches the
following fire departments: Fresno, Thompsons, Pleak, Needville,
Beasley, Orchard, and Fulshear. The tone-outs and dispatcher are also
on 154.22 pl 114.8. Their system is set up kind of weird because a
unit can reply on the VHF repeater and it will not be heard on 800,
or they can reply on 800 and it won't carry over to VHF, but the
dispatcher comes out on VHF and 800 at all times. Fulshear has a
talkgroup of 4720, Needville has one at 45616, and Northeast VFD has
one at 45648. These are sometimes used for response to an incident,
and chit-chat, and can be monitored by the dispatcher. Since the
talkgroups are a part of STAR-NET, the best place to listen for them
is the old Fort Bend County Richmond site, though you can sometimes
catch the Fresno dispatch talkgroup on the Clodine site. BTW, this is
all stuff I've heard on the air.

3548. FD keying up without voice transmission

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-25 20:58:45 UTC
From: tapeman65
Topic: 3548 Message: 3548

I have noticed on the some of the FD freq's that every few seconds there is something that sounds like someone is keying a mic 2 or 3 times with a slight bleeping sound, does anyone get that noise. Or is it the FD system is a LTR trunking system. I know LTR 800 systems while not in trunking mode will have a slight burst of noise every 10 seconds or so. I thought maybe i havn't set the freqs up correctly in my 780 scanner. I don't know maybe they just keep keyng up often without any voice or am i missing some transmissions. I don't recall PD freqs doing that. Please solve this one for me. Thanks

no, HFD has a really wierd setup, their data transmissions for their status boards are on the same freq. as their main voice comms.

From: katytiger98
Topic: 3552 Message: 3552

Does anyone have frequencies for out over here? I have the constable and the sheriff but they work more towards the city. I do have 2 of Katy PD's talkgroups and West I-10 VFD but I don't have the Katy VFD. I have Katy ISD police also. These frequencies are listed under Clodine. Does anyone know any others or know where I can look for others? Also, is there a KeyMap program for the computer? I usually here the dispatcher tell the officer where the accident is by using KeyMap, I have seen books, what about computer programs?

Our Voice(vhf) pagers are 154.235 i believe, we do have a "patch" that the pager will tone off of the 800, but has not been working latley.... But there are only 3 FD's that Ft bend dispatches that have their own channels(NorthEast, Fulsher, and Needville) The Rest get dispatched off of the "fire Dispatch" which is listed as the Fresno ID.....We still have VHF, but don't really use it now that we have 800, Have it just incase 800 goes down and for the vhf pagers...be safe

Steven

Still does not look like Key Map offers a computer-based map program (at least for consumers). Somehow there are programs used by commercial and government entities to resolve addresses to Keymap locations but I see no mention of them at their webpage:
http://www.keymap.com
I, for one, would like to see something like that as well.
Until then, I'll be booking it with the rest of you.
Actually, there is an email for inquiries about Computer Mapping, GIS and Electronic Publishing. See this:
http://www.keymaps.com/aboutus/contact.cfm

There's nothing you can do about the MAST data on HFD/EMS/PD frequencies.
Well, there is one thing. You can get a commercial radio that does MDC
decoding and gives you an option to mute that audio coming through your
speaker. That is what Houston is doing to keep themselves from going crazy.
Sure wish scanner manufacturers could put that feature in their radios.
In a few years, though, it may be all be a moot point. I hear Houston is
looking into the 700 MHz public safety band for future consideration. All
new radios for them, different status updating probably, and new scanners
needed for the rest of us.

3556. Re: [HoustonScan] Re: 154.130??

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-26 00:47:41 UTC
From: Myles Barkman
Topic: 3522 Message: 3556

That's what I get for posting from work and not being able to cut/paste from my page.
My file names are .htm locally on my computer (back from the days when I was running Windows 3.11 and before) and I never went to the longer name. My FTP program converts them to ".html". Guess I can change all my files now.
Does anyone remember how to use DOS anymore? :)

Most Dispatch Centers Hand Enter the Key Map Data into there cad systems.
The resolve the Street data by block ranges and tell the cad what blocks are
on what pages.

KeyMap will sell you there Street data in a Database format for translating
to a CAD software but they want PREMIUM Penny for it.

Still does not look like Key Map offers a computer-based map program (at
least for consumers). Somehow there are programs used by commercial and
government entities to resolve addresses to Keymap locations but I see no
mention of them at their webpage:
http://www.keymap.com
I, for one, would like to see something like that as well.
Until then, I'll be booking it with the rest of you.
Actually, there is an email for inquiries about Computer Mapping, GIS and
Electronic Publishing. See this:

Here's some public safety stuff to listen to out there:
155.76 146.2 Waller SO old Primary and local Fire & Police
155.9325 146.2 Waller SO new Dispatch
2384 FBSO North Dispatch talkgroup (can also be heard off the Clodine site)
155.115 127.3 Katy VFD (not on 800)
I believe Brookshire Fire & Police are on the 155.76 frequency. If anyone can elaborate on this, let me know.
katytiger98 <katytiger98@...> wrote:Does anyone have frequencies for out over here? I have the constable
and the sheriff but they work more towards the city. I do have 2 of
Katy PD's talkgroups and West I-10 VFD but I don't have the Katy
VFD. I have Katy ISD police also. These frequencies are listed under
Clodine. Does anyone know any others or know where I can look for
others? Also, is there a KeyMap program for the computer? I usually
here the dispatcher tell the officer where the accident is by using
KeyMap, I have seen books, what about computer programs?

That's what I get for posting from work and not being able to cut/paste
from
my page.
My file names are .htm locally on my computer (back from the days when I
was
running Windows 3.11 and before) and I never went to the longer name.
My
FTP program converts them to ".html". Guess I can change all my files
now.
Does anyone remember how to use DOS anymore? :)

You should be able to refer to
http://home.houston.rr.com/freqs/harris.htm to find out whoyou are
hearing on the STAR-Net system. Doesn't matter what site they are
on. The talkgroups are unique to each agency. I may need to do some
updating to the list with all this good info about Fort Bend fire
stuff now...

> The talkgroup listed for Fresno FD 1 (3984) dispatches the
following fire departments: Fresno, Thompsons, Pleak, Needville,
Beasley, Orchard, and Fulshear. The tone-outs and dispatcher are also
on 154.22 pl 114.8. Their system is set up kind of weird because a
unit can reply on the VHF repeater and it will not be heard on 800,
or they can reply on 800 and it won't carry over to VHF, but the
dispatcher comes out on VHF and 800 at all times. Fulshear has a
talkgroup of 4720, Needville has one at 45616, and Northeast VFD has
one at 45648. These are sometimes used for response to an incident,
and chit-chat, and can be monitored by the dispatcher. Since the
talkgroups are a part of STAR-NET, the best place to listen for them
is the old Fort Bend County Richmond site, though you can sometimes
catch the Fresno dispatch talkgroup on the Clodine site. BTW, this is
all stuff I've heard on the air.

A quick comment about 154.22. In the past thsi was a good frequency to monitor. Pretty good signal; I received it as far from Fresno as Bellaire blvd and Stella Link. there was also a fair amount of FD fraffic on the frequency.

155.295, PL 151.4 is now used by West I-10 VFD. It was given to W I-10 to
use by WHC EMS.
WHC EMS is on the Star-Net system and does not have a simulcast for paging.

I am in the area visting freinds and have my 780 programed with the Harris county downtown system and the Houston FD and the Houston PD freqencies. I am near 290 and hwy 6/FM1960 area. I noticed a fire station i think was called Copperfield FD hear on Hwy 6. Could someone tell me what fire dept and police dept covers this area Harria county or what.I looked in the harris county talkgoups listing but did not find anything. I would like any freqs or talkgoups for this area and if it is the Harris county, what would be the best system to monitor (Downtown or anyother) that might be closer to me here.

3579. freq list reference

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-29 06:44:28 UTC
From: Myles Barkman
Topic: 3579 Message: 3579

Just a notice that I changed the name of my talkgroup list for the STAR-Net system from harris.html to STAR-Net.html.
I've also changed the title of that page to reflect that.
Since the system has grown to areas outside Harris County and includes Chambers, Brazoria, and Fort Bend counties, I figured that might help avoid some confusion and is more accurate in it's description anyway.

I may try updating my info on my backup sites tomorrow so everything will be a mirror to my main site but remember that the backup sites are secondary to the main site and will not be kept up and updated as often as the main site. Roadrunner has been pretty reliable (so far) so I don't see much of a need for two backup sites and the other temporary site (Earthlink). I'm just saying don't rely on the backup sites for fresh info.

3580. Hospital Diversion page

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-29 07:04:45 UTC
From: Myles Barkman
Topic: 3580 Message: 3580

Just tried going to HFD's hospital diversion status page and see that they have discontinued the service and went with an outside agency to handle that kind of information.
Looks like Joe Public can't see this stuff for free anymore.
http://info.emsystem.com/index.cfm
This is what you see if you try to go to the site from HFD:
http://www.ci.houston.tx.us/hfd/importantnote.html

At least we still have the active incidents page.

3581. 3-11 Fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-11-30 04:44:15 UTC
From: HouScan@webtv.net
Topic: 323 Message: 3581

Anyone close enough to Sheldon to hear the 3-11 fire there? Its in a strip shopping center on C.E. King Pkwy & Tidwell. Channelview & Crosby are there & Pasadena just now sent a Chief, an engine, & ladder truck.

Dan

Peace~out

Hello List,
I'll be lurking here for awhile since I will be spending 2 weeks in Houston in Feb.

I'm from Philadelphia but please don't hold it against me.

If anyone would like Philadelphia area information feel free to contact me off list.

Some interesting information in there.
I could not get the first link to work for me. It wanted me to log in.
FYI, that list is a few years outdated.
They don't use 161.640 MHz anymore. They now use 450.5875 MHz.
Don't know if anyone is still on 155.265. Used to hear a check in net but
haven't heard it in a long time.
164.200 apparently was JSC security some time ago but they have been on UHF
for years.
164.200 is now the input to a repeater (169.000) used for the building
maintenance type guys.
48.300 MHz is licensed to Texas New Mexico Power Company all over the state
of Texas including several cities in Galveston County. Must be some sort of
"common" frequency for them.

Surprised it lasted this long if this is one of the originals.
Mine lost their minds awhile back, but then again, I used the heck out of them.
This is one place I've gotten batteries from before.
http://nicdlady.com/
This is where I got a couple last time I ordered.
http://www.batteriesamerica.com/
Had to get another battery for my 235 also and a ham HT.
I went with the BP-120x (1650mAh) for $26.00.
Look under "Ham Radio" and scroll down until you get to the Uniden section.
You get a lot more life out of a higher capacity battery, NiMH doesn't have quite the memory effect that NiCD does, but you have to be careful about overcharging them.
You can use the charger that came with the 235 but don't leave it on there for more than 24 hours.

Dave in Houston

I have written this several times on several lists. If you want to buy $30 - $35 batteries, fine; the GNP needs your support. If you want to build your own for a dollar or two, do the following. (If you want the super NiMH triple-capacity cells, Wal-Mart sells 4 for about $11. They work perfectly, charge in the scanner, and I use them now in my BC245XLT and PRO-93; try them, and you'll never go back!)

1. Buy Wal-Mart clearance phone batteries. (The hunt for the clearance items, marked down several times, is half the fun!) Most can be had for a dollar or less, and have 2 to 5 AA NiCd cells. I recently bought 15 batteries at 75 cents each, each having five cells. They have never been used or recharged, and last as long as the Uniden packs (because they are 600 mAh cells).

2. Reuse the plug and wires from the old pack, and make up a new one by soldering wires where appropriate. Match the old pack, and watch your polarity! Some batteries will yield cells already joined in twos, reducing the soldering.

I've never damaged a cell by soldering; YMMV. Although the new pack can be wrapped in tape, food cling wrap works best, and does not add bulk.

3. For additional homemade packs, visit a Radio Shack or other store and ask politely to clip the wires and connectors from a few of the junk batteries in their recycle box. Always use the BLACK connectors; NEVER use the white connectors!

I have a quick (scan) pic I could send if anyone wants to see a homemade pack. Email me at (without the spaces):

Let me add something to this now that I looked at the first site. Lots of police/sheriff departments between Houston and San Antonio are now using the MANY LCRA sites. When you figure out your route, look here for information on site locations, frequencies and talkgroups.
This is all assuming you have a scanner that can do 900 MHz EDACS.

3609. STAR-NET system

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-06 12:07:13 UTC
From: Myles Barkman
Topic: 3609 Message: 3609

Anyone know what control channels the new Brazoria and Richmond STAR-Net sites use?
So far, I know Brazoria uses 867.725 MHz. Need one more.
Don't know any for the new Richmond site.

Unless you have a wish to take the sight seeing trip through
LaGrange, you would do much better to go 290....seriously!
As to what to scan, cant help ya there except I would recommend
DPS! :)

Chris

Is the Richmond site even on the air? It would seem now that the Fort Bend trunk system is a fully integrated component of STAR-NET since Harris County talkgroups are popping up on it, so what would they need with a second site in the same city? Oh, well, I'll give it a listen this weekend.

> I have written this several times on several lists. If you want to buy
$30 - $35 batteries, fine; the GNP needs your support. If you want to build
your own for a dollar or two, do the following. (If you want the super NiMH
triple-capacity cells, Wal-Mart sells 4 for about $11. They work perfectly,
charge in the scanner, and I use them now in my BC245XLT and PRO-93; try
them, and you'll never go back!)
>
> 1. Buy Wal-Mart clearance phone batteries. (The hunt for the clearance
items, marked down several times, is half the fun!) Most can be had for a
dollar or less, and have 2 to 5 AA NiCd cells. I recently bought 15
batteries at 75 cents each, each having five cells. They have never been
used or recharged, and last as long as the Uniden packs (because they are
600 mAh cells).
>
> 2. Reuse the plug and wires from the old pack, and make up a new one by
soldering wires where appropriate. Match the old pack, and watch your
polarity! Some batteries will yield cells already joined in twos, reducing
the soldering.
>
> I've never damaged a cell by soldering; YMMV. Although the new pack can
be wrapped in tape, food cling wrap works best, and does not add bulk.
>
> 3. For additional homemade packs, visit a Radio Shack or other store and
ask politely to clip the wires and connectors from a few of the junk

batteries in their recycle box. Always use the BLACK connectors; NEVER use the white connectors!

Yeah, that one I have for the original Fort Bend County trunk system in Richmond.
I'm looking for any for the new system that is supposedly going up in Richmond (to replace the original one?).
Freqs are:
866.200, 867.4375, 867.7875, 868.425, and 868.850 MHz

I'm too far away to hear either system so I need y'all to help me out on these.

3629. Re: [HoustonScan] Re: STAR-NET system

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-09 14:18:40 UTC
From: Joshua Wallace
Topic: 3609 Message: 3629

All right, the new Richmond site is NOT on the air as of yet. The old Fort Bend system and its frequencies are still valid. It shows a system id of 2318 and the control channel is 868.825.

3630. Programing RS PRO-2052

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-09 14:18:55 UTC
From: texas_hoppy <larry.reese@chron.com>
Topic: 3630 Message: 3630

I am trying to program my new radio Shack PRO-2052 for the Harris county sheriff dept and others on the trunk fregs.
I have programed scanners before(not hard to do), but I am having problems getting this done on this scanner.
I entered the 800 mhz freqs in a band, but where do I put in the Talk Groups numbers?

Thanks

Larry Reese

Cable can be found at www.pro95.com.

For software, try www.starrsoft.com/freeware/Win95
Program is called Win 95.

Search Yahoo for Pro 95 groups (there are about 4 or 5).

I just purchased one also and am waiting on the cable.

The below freqs are currently in use on the current Ft. Bend (868.8250) site, although there is a bit of interference on 866.2000 (Nextel?). I presume they are used to accomodate the additional traffic load.

Thanx for the info.

Since the Harris County downtown Houston site has been having
problems with Nextel due to the proximity to each other's
transmitters, (the skyscraper to the left) I presumed that this was
the cause of the problem. The HPD MDT transmitters had completely
slipped my mind.

Happy Scanning.

Just saw the Houston CAD dispatch on IPN about a plane crash in Bellaire.
Apparently a banner came down at the 6200 block of South Rice in Keymap 531
C.
Responding units on HFD A4 453.950.
Witnesses say the plane appeared to be in trouble but there is no
information from Hobby or IAH about a plane in trouble.
HFD units are cruising the streets looking for anything.
The banner dropped over some power lines. Haven't heard if power was
affected.

Does anyone know the name of the dispatch operation in the 1960 area & what departments it dispatches?

Thanks

Topic: 3653 Message: 3653

The communications center that dispatches the 1960 area is located on Sugar Pine at 1960, Cypress Creek EMS is the agency that employes the dispatchers, they dispatch their own EMS, and 4 main fire channels which dispatch Cypress Creek, Klein, Ponderosa, Champions, Spring, and Little York VFD's. Hope this helped answer your question.

I know on several occassions, Cy-Fair VFD has had all 3 aircraft on a scene at the same time and if I remember right, one of the aircraft transported to Hermann then turned around and came back to pick up again. Cy-Fair VFD uses them extensively (why sometimes I don't know) and I am pretty sure that more than 4 is not out of reach for Cy-Fair VFD.

860.7375 MHz belongs to the Houston Aviation Department. It is part of
their EDACS trunk system. Used for all three city airports.

Interesting trivia: LifeFlight has four helos, one normally down for PM. Apart from the memorial for the lost LF 4, I think the 2001 tropical storm was the last time all four had to be up. They were rather frantically transferring patients out of "Lake Hermann." :-)

I thought LF1 was the ship that went down.

LF4 was the replacement ship. The only reason they had 3 ships for the memorial service is that one of the ships was a "rental".

Listening to them on 800, I have only heard LF2, 3 and 4.

I may be way off base, but this is what I understood.

3672. RE: [HoustonScan] LIFEFLIGHT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-16 00:34:33 UTC
From: Ken Merritt
Topic: 3658 Message: 3672

Right, as I know the story, the day LF1 went down, the
powers that be were on the phone to get a "loaner" so
that they still had 3 ships...Thus the 3 at the
memorial service.

3673. Re: LIFEFLIGHT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-16 01:14:01 UTC
From: b6876 <bryan@hoffpauir.com>
Topic: 3658 Message: 3673

there was a major mva saturday night in pasadena around 11:15pm. apparently it was a 1 car accident, car lost control and went into ditch near the intersection of fairmont & burke. lifeflight was called out to scene to transport a 13 year old girl with amputation of right arm. i was listening to everything on pasadena trunk while i was at some nearby apartments. i saw lifeflight fly over, then land. only problem was i didn't have the lifeflight freqs. could someone post all the freqs that they use. i assume that the hermann choppers covered this mva as well as all needed incidents in the greater harris county area? i would like to listen in next time i hear them called out, so anyone's help would be appreciated.

thanks

I just talked to a lifeflight dispatcher and she said have only three
ships...even when when they lost a ship, they only had three ships.
they
often have three birds at the same scene.

3680. RE: [HoustonScan] LIFEFLIGHT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-16 01:49:03 UTC
From: Scott Royall
Topic: 3658 Message: 3680

Maybe the remaining LF 1 crews use the callsign. (?)

I don't think they retired the number, just assigned the number to
another
bird.

Date: 2002-12-16 02:05:31 UTC
From: SCOTTJENGLE@AOL.COM
Topic: 3681 Message: 3682

CAME ACROSS EARLIER BUT STILL NEO AIRCRAFT FOUND

3683. RE: [HoustonScan] LIFEFLIGHT

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-16 02:12:54 UTC
From: Ken Merritt
Topic: 3658 Message: 3683

Negative on LF1...It is VERY bad luck, and bad taste
to use the Ship number off of a destroyed ship...I
have monitored them on a regular basis and they only
use LF2, LF3 and LF4.

From: SCOTTJENGLE@AOL.COM
Topic: 3685 Message: 3685

NO IT WAS LIFEFLIGHT ON THE PAD CAUGHT THE FENCE. INJURED 3 I THINK.
FLIGHT NURSE WAS TRISH CRANE HUSBAND WAS HPD SGT. SHE HAD BACK INJURY

NTSB Identification: FTW89FA078 . The docket is stored on NTSB microfiche number 41719.

Accident occurred Sunday, April 09, 1989 at HOUSTON, TX
Aircraft:MBB BK-117A-4, registration: N120HH
Injuries: 3 Serious.

THE HELICOPTER WAS BEING OPERD FM A TEMPORARY LNDG ZONE (LZ) IN A PARKING LOT, WHILE THE HOSPITAL HELIPORT WAS BEING RESURFACED. AS THE PLT WAS PREPARING TO TAKEOFF AT NGT TO GET A PATIENT AT ANOTHER LCTN, HE NOTED PSNL IN THE AREA OF THE LZ & ADZD THE DISPATCHER OF THE LACK OF SECURITY. AT THAT TIME, THE WX (10 MI EAST AT HOUSTON HOBBY ARPT) WAS IN PART: 900' OVC, VIS 8 MI WITH LIGHT DRIZZLE, WIND FM 040 DEG AT 14 KTS. THE PLT BGN A VERTICAL TAKEOFF TO CLR OBSTACLES.HE RPRTD THAT AFTER LIFT-OFF, THE HELICOPTER ENCTRD TURBC & A VENTURI EFFECT FM WIND BLOWING AROUND THE BUILDINGS. ALSO,HE INDCD THAT HIS VISUAL QUES WERE REDUCED AS HE WAS WAS WATCHING FOR PEOPLE IN THE AREA OF THE LZ. AT ABOUT THAT TIME, WITNESSES OBSERVED THE HELICOPTER DRIFT BACKWARD. SUBSEQUENTLY, THE TAIL ROTOR CONTACTED THE TOP OF A GARAGE, THEN THE HELICOPTER BGN AN UNCTLD SPIN & CRASHED. THE PLT & BOTH MEDICAL CREW MEMBERS WERE SERIOUSLY INJURED.

The National Transportation Safety Board determines the probable cause(s) of this accident as follows.

FAILURE OF THE PILOT TO MAINTAIN CLEARANCE FROM THE OBSTRUCTION (GARAGE). FACTORS RELATED TO THE ACCIDENT WERE: DARKNESS, ADVERSE WEATHER CONDITIONS, PERSONNEL IN THE AREA OF THE TEMPORARY HELIPORT, LACK OF SECURITY PROVIDED BY HOSPITAL MANAGEMENT, WHICH RESULTED IN A NECESSITY FOR THE PLT TO DIVERT HIS ATTENTION, AND THE PILOT'S LACK OF VISUAL QUES.

3686. FW: [HoustonScan] Lifeflight

Lifeflight uses the STAR-Net trunk system (AKA Harris County trunk) talkgroup 208 for it's primary dispatch and operating radio communications. You need to listen to the downtown site since the helicopters rarely loose contact with it (duh).

They use 128.850 MHz when the bird is tuning to another 800 MHz channel or to talk to other medivac helicopter services. That is their old primary operating channel. You will hear the dispatcher talking on this one at the same time they talk on 800 MHz. You just won't hear the helicopter, unless they are on VHF too.

The helicopters use a variety of other frequencies to talk to agencies when coordinating landing zones and to receive preliminary patient information from ground crews.

They use:
154.280 MHz (statewide fire mutual aid, AKA High-band Mutual aid)
155.340 MHz (HAHERN-common VHF medical channel)
154.950 MHz (statewide law enforcement car-car, AKA Intercity)
866.5125 MHz (ITAC-2-usually in simplex mode)
458.075 MHz (new fireground channel in northern Harris County)
You may even hear them on 123.025 MHz when they might talk to other helicopters in the area so everyone knows where the others are at.
You will also hear them talking to Hobby tower on 118.7 MHz and Clover Field Unicom 122.800 MHz when they are in those areas.
Since one of the birds comes out of Hooks, you might hear them on 118.4 MHz.

I just talked to a lifeflight dispatcher and she said have only three
ships...even when when they lost a ship, they only had three ships.
they
often have three birds at the same scene.

I just talked to a lifeflight dispatcher and she said have only three ships...even when when they lost a ship, they only had three ships.
they
often have three birds at the same scene.

I understand that Cinco Ranch will have it's own fully paid 24 hr FD starting Jan 1st. It will be called the Willowfork FD and the station will be located near Mason Rd and Westheimer (Fort Bend Co.), and will be dispatched by West I-10 FD temporarily.

This information courtesy Capt Harris and FF DiCamillio, HFD Station 68.

From: Jay Ostertag
Topic: 3707 Message: 3708

To add to that:

West I-10s agreement expires on December 28th. That means that they have to have the FD up and operating by that day. In our business meeting on Monday, our chief told us that they have a loaner pumper on the way. WillowFork's chief has no idea if it will be equipped. The haven't poured the slab yet for the station. They need 24 firefighters for a complete department, so far they only have 10. Fort Bend SO will eventually dispatch for them, but only if they have the necessary agreements in place prior to January. West I - 10 is not supposed to dispatch for them (being a Harris Co agency) unless an inter-local agreement is signed prior to the 28th. This has to be signed in the commissioner's court, which is going to be hard around the holidays, which could, in essence, leave them dispatch-less.
West I-10 has to send a letter to the state insurance board stating that on December 28th that this area will no longer be under our primary response. Their rating will jump from a 2-3 to a 10 instantly.

Should get interesting.

Jay Ostertag,
West I-10 FD Station 4

3709. plane crash

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-20 20:56:06 UTC
From: Myles Barkman
Topic: 1534 Message: 3709

Private plane crashed before 2pm this afternoon near Hwy 90 west of State Road 36 Bypass (near Spencer Rd).
Sounds like they found the pilot but it doesn't sound good with talk of "need lots of rubber gloves and body bag."
They are letting the railroad operate now along 90 slowly.

Ops can be heard on STAR-Net system on FBSO North talkgroup 2384 and some talkgroup called Fireground 1 talkgroup 3920. Don't know if this is Rosenberg FD or Fort Bend Co.
Some ops may be heard on 154.130 MHz also.

The vehicle was a Ford Explorer that struck a train crossing guard. The incident was in channelview down from station 2.Mutual aid was from SouthLake Medic 15, Sheldon Eng 23, Cloverleaf ENG?. 4 patients were transported. Two Pt's by lifeflight 3, 1 by lifeflight 4 and the last was taken to a local hospital. A lesion that can be learned from this accident is buckle up or place your kids in car seats.

How about slow down and pay attention?
Now wonder she crashed into a fixed object on the side of the road with all those kids running around unsecured.
Hope they weren't injured too severely. It's not the kids fault.

There seems to be some problems with yahoogroups mail being delivered to RoadRunner accounts again. I've emailed both Roadrunner and Yahoo support about this problem. Hopefully, they can het their heads together (and out of something) and get this fixed again.
For the mean time, you'll have to reactivate your account to start getting your emails again.

Don't know if any other ISPs are affected.

Nothing else to do but see what happens.

Beaumont Fire uses 154.400 pl 186.2 for dispatching and fireground ops. They have simplex tac channels on VHF but I don't know what they are. Also listen for their morning plant roll call on 154.28 mutual aid with all the plants and VFD's that take part in their mutual aid agreement. If you have a good outside antenna, you can hear them over here most days. cboone@... wrote:I'll ask a friend over in BMT and see....

The Houston office of Emergency Management monitors 146.840 MHz all the time and is the primary weather spotter frequency that the weather service takes reports on for Harris County.
146.640 MHz is used for the Clear Lake area.
The Saltgrass repeater link system is sometimes linked to 146.840 MHz to extend coverage to almost all of southeast Texas but for some reason is not linked today. But the weather service is using it, just not linked to 146.840 MHz now.
Houston area Saltgrass link system repeaters are:
443.825/146.920 MHz Houston
442.700 MHz Woodlands
442.725 MHz New Waverly
444.075 MHz Katy
444.425 MHz Clute/Angleton
444.725 MHz Galveston
Apparently not all these repeaters are being linked so if you don't hear anything from the weather service every 30 seconds, you are probably listening to a dead link. Listen to the next closest frequency you can hear.

This is a particularly dangerous situation and the tornado watch has been reissued for the area. The trend will be for supercells to form over the area and tornadoes are expected to develop. Large hail and damaging winds are also side effects of these type of storms.

3730. severe weather threat

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-23 21:12:57 UTC
From: Myles Barkman
Topic: 3730 Message: 3730

It looks like the highest risk of severe weather is north of I-10 so far.
The risk increases as you approach the warm front lying to the north of the area west to east near Huntsville.
Much of the severe weather is occurring in counties to the north of Houston-Montgomery County, Trinity County, Walker County and San Jacinto.
The highest threat of tornadoes exists in an area from around Columbus to around Alexandria, LA and northward.
But this entire area is at risk for severe weather and you know how difficult it is to forecast the weather around here so watch out.

Watch for cloud lowerings that persist over a period of time and has associated rotation in a clockwise direction. Also watch for a greenish tint to the clouds as that is a good indication that hail is present. Hail indicates an extreme updraft in the clouds. Enough to make chunks of ice the size of peas to softballs fly back upwards.
Listen for a loud roar. This could indicate several things-high straight line winds, a tornado, hail, or very heavy rain. All of these are forms of severe weather and could mean any of the others are present.
Lightning in and of itself is dangerous but it has been shown that supercell thunderstorms often create a high frequency of cloud to ground lightning in the updraft region. Wind causes a lot of static charge buildup so the high updraft of a supercell tends to make supercells a lightning generator.
If you notice near constant lightning in a particular area associated with a cloud lowering, it may be an indication that the storm is tornadic.

I'm going to let the weather service take over the rest of the skywarn training from here. If you'd like to learn more about how to spot severe weather, go to one of the scheduled Skywarn training sessions given by the weather service. Go to this link
http://www.srh.noaa.gov/hgx/severe/skywarn/skywarn03.htm to find out more about Skywarn and when a session will be near you. They frequently add sessions to this list so check it often since you may only get a few days notice of a new class. These are completely free and everyone is invited to attend these.
These sessions usually are given before the real severe weather season starts. We just happen to be in our secondary season right now.

3732. new weather

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-24 00:21:53 UTC
From: Myles Barkman
Topic: 3732 Message: 3732

Like I said, it's hard to predict the weather around here. Looks like we came through the first wave without any real damage.
Our newest threat just formed out in Central Texas in the form of a line stretching from Laredo to Granbury.
There are still storms to the north forming along the semi-stationary front. Some of those storms might make it to Houston from the north or at least to Conroe.
The line from the west looks to be our best shot at nasty weather later this evening. The southern end of the line is often the worst since it has no competition for warm inflow. It looks like Houston will be near the southern end of this line. If you look at the radar, you can see how instead of a solid line of red, it is mostly a group of single storms in a line configuration. They are probably all supercells. The one between Cotulla and Laredo is the worst and appears to have heavy rotation. A severe thunderstorm warning is out for La Salle county but I won't be surprised if they upgrade it to a tornado warning.

No kidding. See that line coming eastbound along I-10? It must be making about 75 mph. Should make west Houston within the next 30 to 45 minutes.

Look here....

<http://www.intellicast.com/Local/USLocalWide.asp?loc=ksat&seg=LocalWeather&prodgrp=RadarImagery&product=RadarLoop&prodnav=none>

You'll probably have to copy & paste the address to ur nav bar.

When it get's closer use this one....<http://www.intellicast.com/Local/USLocalWide.asp?loc=kiah&seg=LocalWeather&prodgrp=RadarImagery&product=MetroRadarLoop&prodnav=none>

From: Peter Kirk
Topic: 3738 Message: 3738

As Christmas approaches, Santa is busy delivering toys. Currently he is in Australia and will be traveling west through Asia and Europe. You can track him (real time) at this site:

http://www.noradsanta.org/english/radar/index.html

As for frequencies, most are classified (for obvious reasons). However over the years he has been know to operate on these:

243.7 Primary Air-to-Ground (AM)
356.9 Secondary Air-to-Ground (AM)
420.0 Air-to-Air Intercom (FM low power) Used between Santa and the Reindeer
243.0 Emergency (AM)
111.3 Rudolph's beacon

Reception notes: At Santa's high cruising altitude, reception is possible for approx 1000 miles from his location.

North Pole Astro Digital Trunked Radio System (new for this year)

935.000
935.020
935.040
935.060
935.080

SantaSat 1 (45 degrees West)

2153 SantaSat 1 F1 Primary Phone (TDMA)
2251 SantaSat 1 F2 Secondary Phone (TDMA)

There are 4 SantaSats located in geostationary orbit over the Earth. The above is over the Atlantic at 45 degrees West longutude. There is one over the Pacific named SantaSat 2 but it's at 179 degrees West longitude and cannot be received on the East Coast of the USA.

Everyone have a very merry Christmas and a Happy New Year!

Hi Myles,
Our power in Pecan Grove went off about a dozen times last night, I was trying to keep the HFD scanner link up as much as possible but it was really tough. My computer would crash after every power hit. Not to mention all the scanner traffic and trying to dispatch IPN, whatta night!!

Really could've used some kind of back up power source. Of course the flashlights were in the trunk of the car!

From: Marvin Suggs <msuggs@houston.rr.com>
Topic: 3741 Message: 3741

Hi Everybody,

I've added a few fire departments to our live fire scanner:

http://groups.yahoo.com/group/houstonfd/

Currently monitoring;

HFD channels A2, A3 and A4
Cypress Creek VFD
Klein/Champions/Ponderosa VFD
Northwest VFD
Spring/Northeast VFD
Bellaire FD
I've put in other UHF freqs but haven't heard anything yet and can
add CyFair VFD if you'd like.

Take care and Merry Christmas,
Marvin

Hi Everybody,

I was putting together a frequency list for the departments dispatched by Harris County Emergency Communications. I just needed some help filling in the blanks:

Fire:
Aldine-155.385
Channelview-154.370
Crosby- ?Freq needed?
Eastex-155.385
Highlands-?Freq needed?
Northwest-453.575
Sheldon-?Freq needed?
Westfield-155.385

EMS:
ESD#1-155.385
ESD#5-?Freq needed?
Southlake-?Freq needed?

And are there any other depts/freqs used by HCEC?
Thanks for any help and Merry Christmas,
Marvin

Crosby VFD uses 151.100 pl 156.7. Also, I still hear Eastex, Aldine, and Westfield primarily using 33.86 pl 192.8 simplex. Do they have a one-way patch to the highband frequency like Cy-Fair did when they were on lowband? They also use 155.16 for fireground ops and they call it "Old EMS Primary."

From: Marvin Suggs <msuggs@houston.rr.com>
Topic: 3741 Message: 3755

Hi Everybody,

The feed sould be working now, as of 10:18, 12/28/02. I had to change the link from the group site, so please update your bookmarks to:

http://www.groovyghosthunters.com/houstonfire.asx
or:

http://groups.yahoo.com/group/houstonfd

And I've adjusted the audio level, that's about as loud as I can get it before it starts to distort.

Sorry for any inconvience. I've also added Shell Chemical response Team and CIMA dispatch to the fire scanner, so when conditions are good I should be able to pick those up.

Take care and Happy New Year,
Marvin

Looked at the previous weeks posts about the saltgrass link and other severe weather frequencies. What other repeaters in the Galveston county area would be activated in the event of a severe weather threat. I seem to remember a couple in Dickinson and Texas City, but seem to have misplaced those notes.

Thanks for any help.

Not really important P.S., but any of the above for Brazoria County (besides Angleton Saltgrass) also too please.... the only one I've heard of was the Angleton one.

I answered my own question by using the nifty "Search Archives" function in Yahoo! Groups. I'll repost...

Skywarn:
146.840 Houston
164.640 Clear Lake/Nassau Bay
147.020 Montgomery County/Conroe
145.490 Fort Bend County/Richmond
145.270 Chambers County/Anahuac ???
145.410 Galveeston County/Dickinson
147.140 Galveston County/southern mainland
146.680 Galveston County/island
147.040 Lake Livingston

What we don't have yet:

Liberty County/Liberty area
Waller County
Brazoria County/Angelton area
Walker County/Huntsville area
Bryan/College Station area.
Lufkin/Nacodoches area

3770. Skywarn repeaters

Found this on another site.. answers most of my questions.
I'm not sure how old the list is, but it's a start, and I'm sure
they would not change these frequencies unless they absolutely had
to. There are credits at the end and Myles did contribute.

BTW: The Waco (McLennan county) tower has excellent range, would be
nice to have one here in Harris County and use the old freq for
backup... but I'm sure that would cost a bundle.

Source is: http://www.caps.ou.edu/~kbrews/spotfreq/

Yeah, I really need to send Keith some updates to that list. You can tell some of that info has been in there for quite awhile. I haven't used that email address for over 3 years.
I've made some updates to a couple of lists just in time for our deja voux Monday night storm event.
First one is a list of commonly used amateur repeaters around Houston during emergency events, including weather.
http://home.houston.rr.com/freqzone/freqs/ham_emergency.html

Second one is a list of scheduled amateur radio nets in the Houston area. Nets are commonly used on the same frequency that would be used during emergencies.
http://home.houston.rr.com/freqzone/hou_nets.html

We have hams at the weather service in League City and at Transtar.
So listen to 146.840, and the nearest Saltgrass link repeater in your area.
Houston has 146.920 and 443.825 MHz.

Line of severe weather currently entering Austin County.
Estimated time for worst part of line to hit Katy-just before 8pm.
Tornado watch in Houston area until 9pm.
There are currently 3 tornado watches and one severe thunderstorm watch just in Texas. A little while ago, there were 4 tornado watches and a storm watch.
Wonder what the record is for number of watches in one state at the same time...
Worst part of this line looks to be around Corpus Christi and is on it's way to heading into the Gulf. Again, it's the southern part of the line that is usually most severe. There is a tornado warning for the southern most cell in this line north of Raymondville.

3773. alvin fire

Yahoo group: HoustonScan (1999 — 2002)
Date: 2002-12-31 02:06:00 UTC
From: Myles Barkman
Topic: 3773 Message: 3773

Not sure what the incident is going on in Alvin (TG 12624) but I hope this
rain helps. Hopefully the lightning doesn't make things worse.
I think I'd get off the ladder. :)

HFD working some fire on Woodcraft/Bassoon KM 532W on A4-453.950. Power not cut off yet and one of the FF got a shock. No lasting harm but he didn't sound like he appreciated it.

FYI, Houston CAD has this as a 6 alarm incident.
Pretty good for only 9 units and a cascade truck.

11496. Data burst on 154.250

Yahoo group: HoustonScan (1999 — 2002)
Date: 2000-05-18 02:05:35 UTC
From: marvin suggs
Topic: 11496 Message: 11496

Anyone know what the data bursts on 154.250 are? They are strongest in Baytown near I-10 and Garth Rd. I know that's the FD freq, so it that something they're doing?

Thanks,
Marvin

I was thinking of that too, you could hear a strong signal followed by a weaker one. But it was non stop for the 20 minutes I listened to it and I know Baytown doesn't have that many apparatus.

I guess it could be. Maybe something around San Jacinto Mall. I hear the same thing in Sugar Land on 453.425, near Hwy 59 and Hwy 6. Near First Colony Mall.

Marvin

Another Supposition:

Did it have the annoying (to use a polite word) "Survey Center Position" squawk that can be heard for miles around job sites, usually on 151.625, 154.570, 154.600, 460.500, 460.550, 469.500, 469.550?

There is only one good reason for that noise. It does allow a scannist to have a heads up for possible slowdowns while driving the freeways and entering work zones.
